INFORMATION ABOUT THIS GUIDE

This edition contains only those variables which will appear in 2020 datasets or which have been removed within the past year. Information on old LFS variables, between the years 2006 and 2018 can be found in previous volumes.

Temporary availability of LFS non-calendar quarter microdata

The ONS is working to ensure that the UK has the vital information needed to respond to the impact of this pandemic on our economy and society, including to be able to monitor the potential impact of COVID19 on the UK labour market. As a result it has been agreed that for a short period of initially 3 months, additional ‘non-calendar quarter’ LFS person microdata will be delivered to Government Departments and the wider research community through the Secure Research Service and the UK Data Service.

Information in this section should provide guidance when analysing ‘non-calendar quarter’ LFS person microdata and so mitigate against any misuse of data.

All new questions introduced to the LFS in April 2020 have been added to microdata delivered to Government Users but unfortunately not those available to the wider research community through the SRS and UKDS due to the issues described below.

- Quality of the new questions

We have currently classified the COVID questions as ‘experimental’ due to some concerns regarding the quality of responses received, and the understanding of the questions raised by interviewers. The COVID questions were included into the LFS questionnaire at very short notice, so didn’t follow the normal questionnaire Dress Rehearsal testing process which would have likely identified these issues. As a result some of the COVID questions have now been removed or amended for the July-Sept quarter, and also additional questions introduced. The new passport questions did however go through the normal testing process and although responses should therefore be of acceptable quality, no analysis of them or how they will form newly designed Passport outputs has yet been done. Therefore these will only be made available to Government Users, who will assist in both the quality assurance of the COVID questions and the design of the new Passport outputs.

- Weighting

The existing LFS weighting methodology is designed to give population estimates for a rolling 3 month period, with totals calibrating to the mid-point of the quarter for the various partition stages. For the noncalendar quarter microdata given there will be only be responses for certain months (e.g. for the new COVID and Passport questions added but also for the regular quarterly specific questions) this raises some concerns over the estimates calculated without a specific monthly weight being used, with precision of estimates likely to decrease which may result in increased bias in estimates. The existing LFS and APS weighting methodology has also recently been changed to incorporate a weekly constraint to assist in dealing with the falling LFS response rates since the COVID lockdown began back in March 2021, and it is planned for this new methodology to be used going forward even when LFS response rates improve.

- Imputation

The LFS currently uses a method of ‘rolled forward imputation’ in its person microdata, where respondents from one quarter are now non-responders in a subsequent quarter (for wave 2 to wave 5 interviews). In these instances respondents data is ‘carried forward’ from previous quarters (for one quarter only). Although this method of imputation for non-response is adequate under normal circumstances, it is not designed to deal with the changes to the labour market experienced in recent months. A new imputation methodology has been researched to improve the measurement of the labour market at this time. Due to time and system constraints, it has not been possible to fully integrate this methodology into the results for Feb-Apr period. However we hope to include more information in later releases as this work develops but early indications suggest that for Feb-Apr period that:

- there is little impact from the use of existing methodology on the headline measures of employment, unemployment and economic inactivity (less than 0.1 percentage point)
- measures relating to hours in this release understate the reduction in the actual number of hours worked by approximately 2-3%.

Seasonal to Calendar Quarters

From 2006 the LFS has been run on CALENDAR quarters i.e. January to March, April to June, July to September, and October to December instead of seasonal quarters i.e. March to May, June to August, September to November, and December to February. This was because EuroStat require us to use calendar quarters and it will also bring us into line with other ONS household surveys. The timings of quarterly-specific questions changed as follows:

Calendar Quarter	previously asked in ...	Seasonal Quarter
January to March (Q1/Winter)		December to February (Q4/Winter)
April to June (Q2/Spring)		March to May (Q1/Spring)
July to September (Q3/Summer)		June to August (Q2/Summer)
October to December (Q4/Autumn)		Sept to November (Q3/Autumn)

Users should be particularly careful when analysing quarter-specific questions over time as the historical calendar-quarter estimates going back to 1997 will be based on **two thirds** of respondents.

For example let us consider the question LANG, introduced in 2003.

When this question was first asked on the LFS, it was asked in the Summer quarter - therefore, in the months June, **July** and **August**.

The calendar quarter that corresponds with the Summer quarter is JS - **July, August** and September.

It can be seen that there is an overlap of two months, but the JS historical estimate will not include the responses of the people who answered the question in June.

The JS historical estimate will also not include September respondents, as this question was not asked in this month.

As a result of the above, users are advised to use percentages instead of levels when doing analysis.

Please note that after the move to calendar quarters in AJ06, this no longer applies.

NA and DNA

Unless otherwise specified in this guide, the coding for “no answer” (NA) and “does not apply” (DNA) are -8 and -9 respectively.

Multi-Response Variables

Multiple response items are questions that can have more than one value for an individual case. This form of question is very useful when respondents are required to select a number of items from a list of possible answers.

The LFS makes use of a number of such questions. For example, ILLDAYS which asks respondents to identify on which day or days of the week they were off work due to sickness or injury. As a week contains seven days, answers to ILLDAYS are stored in one or more of seven separate variables, ILLDAYS1 to ILLDAYS7. Answers are recorded sequentially, so the first answer is held in ILLDAYS1, the second in ILLDAYS2 and so on. A code, one to seven, Monday to Sunday, is used within each variable to distinguish each day.

Some multi-response variables may be “ranked”, in a particular order. QUALS6 is an example of such a variable, where the respondent’s highest qualification is recorded in QUALS601, their second highest in QUALS602, and so on.

The structure of such variables means that users need to adjust their analysis accordingly e.g. to arrive at the total number of people sick on a Friday you would need to sum answers from ILLDAYS1 to ILLDAYS7. Some data analysis packages have multiple response tools that can assist in this.

State Pension Age Change

Between April 2010 and April 2020, women’s State pension age in the UK will increase from 60 to 65, at the rate of one month every two months. From August 2010, ONS will publish headline employment and inactivity rates based on the 16-64 population. No change was made concerning the unemployment rate, which was, and is still based on the population aged 16 and over. The LFS definition of pension age has changed from 65 plus for men and 60 plus for women to 65 plus for men and women; all children under 16 years are classified as economically inactive. Therefore, from April 2010 any routing that previously used the population 'males 16-64 and females 16-59' should change to 'all those aged 16-64', and routing that previously used the population 'males 65+ and females 60+ (pension age)' should change to 'all those aged 65+'.

A detailed ‘flag’ can be calculated over the course of the incremental change to the female State pension age. This will be needed if detailed analysis concerning state pension age is intended. It is recommended that datasets contain two ‘flag’ variables. These derived variables should be called ‘PENFLAGP’ which indicates an individual who is actually of State pension age at the time of interview and ‘NOPENFLG’ which indicates individuals who are aged 16+ and not actually of State pension age at the time of interview. ‘PENFLAGP’ and ‘NOPENFLG’ are both potentially disclosive variables as they can allow for certain respondents, affected by the change, to have their year and month of birth identified. This goes against ONS standards for End User License (EUL). Therefore these variables should not be released on EUL versions of datasets but can be included on restricted access versions of datasets.

In order to calculate an accurate ‘flag’, datasets would need ‘age’, ‘date of birth’ and ‘reference date’ variables. ONS can provide syntax to users who wish to create these variables on their data. Please contact the LFS team in the Social Surveys Division.

Email: ifs@ons.gov.gsi.uk

The Government announced in its October 2010 Spending Review that it will speed up the pace of State pension age equalisation for women from April 2016 so that women’s State pension age will reach 65 in

November 2018. The State pension age will then increase to 66 for both men and women from December 2018 to April 2020. The current approach to recording and analysing those of State pension age will therefore need to be amended before 2016 in order to account for these further changes.

SIC2007

Implementation of Standard Industrial Classification (SIC) 2007

The industry class to which people in employment are coded in the LFS switched to SIC 2007 in January 2009. From then on, all cases were assigned an industry code on the new basis. This included respondents who had been surveyed in the previous quarter whose employment situation had not changed. There was no dual coding.

The transition to the new classification was accompanied by the implementation of a new automatic coding tool for LFS interviewers. A similar tool had been in place for the coding of occupations to the Standard Occupational Classification for several years, but prior to 2009, industry had been coded manually using a printed volume. The new tool is seen as a significant improvement in the coding of industries in the LFS. Its introduction has brought greater consistency since cases with the same description are more likely to be allocated the same code with the coding tool than with the previous approach.

LFS estimates by industry

Conversion variables have been produced for LFS microdata which map cases from the previously used industrial classification (SIC 1992) to SIC 2007 for the years 2006 to 2008 inclusive. Each industry class (4 or 5 digit code) on SIC 1992 was mapped to an industry division on SIC 2007. For pre-2006 microdata a syntax was provided to enable users to derive the mapped estimates themselves.

Users should be aware that, for the quarterly time series of employment on a SIC 2007 basis, there are several step changes at Section and Division level between Q4 2008 and Q1 2009. Investigative analysis has shown that these were caused primarily by the introduction of the new coding tool. Some limitations in the mapping between the two classifications also contributed, but to a much lesser extent.

From Q1 2009 onwards, a set of conversion variables mapping SIC 2007 to SIC 1992 have been included in the microdata. These map SIC 2007 classes to SIC 1992 divisions. Step changes at Q1 2009 are also evident when producing time series on a SIC 1992 basis.

Evaluation of the step changes

Analysis was carried out comparing the recorded and mapped SIC codes for people surveyed in both Q4 2008 and Q1 2009 who reported that they had remained in the same job (referred to as “linked records”). For those respondents who had not changed their job between the two interviews, estimates of employment for the mapped SIC 2007 codes for Q4 2008 were compared with the recorded SIC 2007 codes for Q1 2009.

The table below compares the number of cases mapped to each SIC 2007 Section in Q4 2008 with the number coded to that Section in Q1 2009. The numbers are unweighted. The percentage change in the fourth data column represents the overall effect (primarily from the new coding tool) on each industry Section at the time the SIC 2007 was implemented. For example, the net effect on Manufacturing was a contraction of 9 per cent.

	Total	34,966	34,966	0	0%

Some of the main step changes at Q1 2009 when deriving time series on a SIC 2007 basis can be explained further as follows:

- Sections M and N (Professional, Scientific and Technical activities and Administrative & Support Services) gained significantly from people formerly coded to: Manufacturing; Construction; Information and Communication (J); Recreational (R); and Activities of households as employers.
- Manufacturing (Section C) has decreased in size, in particular losing people to various services within Sections M and N: and also to Distribution (G).
- Education (Section P) has gained mostly from people formerly coded to: Public Admin (O); Arts, Entertainment & Recreation (R) and Health & Social Work (Q).
- Section T (Households as Employers) reduced by 55%, losing people mostly to Admin & Support Services (Section N).

Time series adjustments

The percentage changes in the table above represent primarily the impact of the new coding tool. They can be used in the calculation of simple adjustments to address the step changes in time series of employment estimates on a SIC 2007 basis. This has been done for the estimates of employment by industry as published in the LFS Historical Quarterly Supplement.

SOC2020

The LFS adopted the new classification SOC2020 in January 2021.

Ethnicity, National Identity and Religion

Changes were made to the ethnicity, national identity and religion questions in January 2011 to bring them in line with the census data collection on these topics. In April 2011, further changes were made to the ethnicity questions to bring them in line with the Scottish Census data collection.

The new Ethnicity questions introduced in 2011 were asked afresh rather than having data rotated into them (as is common practice with all new questions). However, where there is a non-contact in JM11 after a successful interview in the previous quarter (OD10), data is usually rotated forward for one wave - these are the 'data brought forward' (DBF) cases (where IOUTCOME=6). These DBF cases in JM11 have no ethnicity, national identity or religion data to bring forward, as we did not ask in the question in OD10.

We therefore had to impute values for the DBF cases in JM11. We used their OD10 responses and mapped them across the new JM11 questions as best as possible. Some of the new JM11 questions have no equivalent in OD11 so no data could be imputed.

Cases that were IOUTCOME=6 in JM11 had the following variables corrected:

Ethnicity questions	Ethnicity DV's	National Identity DV's	Religion DV
ETH11	ETHGB16	NATIDB11	RELIG11
ETHAS11	ETHGB18	NATIDE11	
ETHBL11	ETHUK8	NATIDO11	
ETHMX11	ETHUK9	NATIDS11	
ETHNI11	ETHUK14	NATIDW11	
ETHWHE	ETHUK16		
ETHWHW			
ETHWHS			

No imputation was done for the ethnicity, national identity or religion variables DV's not listed above.

Please follow the below link for a report that looks at the changes made to ethnicity on the LFS in 2011: <http://www.ons.gov.uk/ons/guide-method/method-quality/specific/labour-market/articles-andreports/2011-changes-to-how-ethnicity-is-asked-on-labour-force-survey.pdf>

Disability (Discurr)

Discontinuity was identified in disability rates reported in the LFS between quarter four 2009 and quarter one 2010.

Analysis generally showed that the characteristics of those who were disabled (and those already in the survey who 'became' disabled) did not change significantly over time. The few characteristics that might have been associated with the initial increase in disability were found in subsequent quarters not to be associated with the *sustained* high levels of disability and were therefore thought to be random.

Examination of the survey design, questionnaire wording and routing, and anecdotal evidence from interviewers, did not reveal any significant changes over time. The only change to the administration of the questionnaire was the addition of a short introduction at the start of the disability module:

"I should now like to ask you a few questions about your health. These questions will help us estimate the number of people in the country who have health problems."

The impact of this introduction is thought to be positive in that it prepares respondents for the set of disability questions. Any increase caused by this change should result in a more complete measure of actual disability. This change to the introduction added to the disability module in quarter one 2010 is thought to be the key driver of the step increase in disability. The earlier estimates can still be considered 'best estimates' for those periods and should give a robust picture of changes over time, however, direct comparisons between pre- and post-Q1-10 estimates should not be made.

Please note that from JM12, the method calculating the group '4 – not disabled' changed - this will therefore create a discontinuity in the data. Please see Volume 4 for more information. Also, the variable DISCURR13 replaced DISCURR in OD13.

Analysis of APS datasets

Care needs to be taken when carrying out analysis on education, disability and benefits using the APS datasets due to questionnaire changes. The table below provides information on the variables that are affected by these changes, and where analysis may be affected as a result:

Layout of Variable Information

All variables in this guide are laid out using the same format as follows:

INDIVIDUAL DEMOGRAPHICS

MAIN CHARACTERISTICS

SEX- Sex of respondent

- (1) Male
- (2) Female

FREQUENCY: Each quarter from Spring 92 **COVERAGE:**

Applies to all respondents.

NOTES: Additional interviewer guidance was implemented in JM21, please see User Guide 2 for more information. Interviewer instructions in Northern Ireland have changed to 'ask or record'.

AGE- Age of respondent

(0-99) Age of respondent

FREQUENCY: Each quarter from Spring 92 **COVERAGE:**

Applies to all respondents.

NOTES: Ages over 99 are coded as 99. Text labels are not available for this variable.

The person's age at the end of the reference week is calculated by the computer at the time of the interview. If a person's birthday occurs in the month in which the interview takes place any discrepancies are resolved by checking whether their birthday falls before or after the end of the reference week. Babies under 1 year of age are coded as 0. Age is not re-asked after wave one but it is automatically updated by the laptop based on the date of birth. The one occasion checking is done is when some element of the household box was estimated at the previous wave.

(586) Pakistan
(616) Poland
(997) Other

Between Spring 1992 and Spring 2006 this variable was called NATION.

CRY12 -Country of birth

(921) England
(924) Wales
(923) Scotland
(922) Northern Ireland
(926) UK, Britain (don't know country)
(372) Republic of Ireland

- (356) India
- (586) Pakistan
- (616) Poland
- (997) Other

FREQUENCY: Every quarter from JM12

COVERAGE: Applies to all respondents.

NOTES: This replaced CRY01 in JM12. This question variable was introduced to record in which part of the UK the respondent was born. If the respondent does not know the part of UK they were born in, but is sure that it was the UK, code 926 is used. If 'Ireland' is given as an answer, the interviewer must check whether it is Northern Ireland (code 922) or the Irish Republic (code 372). The Isle of Man and the Channel Islands are not part of the UK and should be coded 997. From JM07 new category codes were introduced for CRY01.

When running tables filtering on CRY01, the relevant category of CRY07 should also be filtered to ensure accuracy.

NATO7- Nationality (other)

FREQUENCY: Each quarter from JM07

From JM12, this applied to all respondents in GB whose nationality was not UK, Irish Republic, India, Pakistan or Poland (NTNLTY12=997). Previous to JM12 this applied to all respondents whose nationality was not UK, Irish Republic, Hong Kong or China.

NOTES: This variable replaces NATO. Country codes have changed and the list expanded. The variable lists all countries and also combines them under main headings. Where a respondent has a dual

nationality the first one is recorded.

FREQUENCY: Each quarter from JM07

COVERAGE: Applies to all respondents.

NOTES: This is a derived variable; please see User Guide 4 for further guidance. This variable replaces CRYOX. From JM12 it is derived from CRY12 & CRYO7. 926 UNITED KINGDOM NOT OTHERWISE SPECIFIED includes all respondents born in the UK (including those who don't know which country in the UK), all respondents born in the Channel Islands and all respondents born in the Isle of Man.

The difference between CRYOX7 and CRYO7 is that CRYOX7 groups together Wales, England, Scotland, Northern Ireland, Channel Islands and Isle of Man into one group - UK/GB (CRYOX7=926) whilst CRYO7 separates these out.

CAMEYR - Year of first arrival in the UK

(1) Answer given as year

FREQUENCY: Each quarter from JM08

COVERAGE: Applies to respondents who are not born in UK, Britain. From JM12, (CRY12 NE 921, 924, 923, 922, 926). Previous to JM12, (CRY01 NE 921, 924, 923,922, 926).

NOTES: In 2008, the word 'first' has been added to the question to help identify those who have settled in the UK more than once. arrival means for any purpose, including holiday trips. Text labels are not available for this variable. 'Arrive' refers to the date of arrival to take up residence. If preceded by a holiday to this country and there is no break between the holiday and staying on, the date of arrival for the holiday is included. If there is a break before taking up residence, the holiday arrival date is not included.

If the respondent takes up residence in this country, leaves the country to live elsewhere before returning to take up permanent residence again, it is the first date of arriving in this country that is required.

Anyone who arrived more than 99 years ago is coded as if it was exactly 99 years ago.

Users are advised to filter in CRYOX7 as people who said their country of birth is Ireland (pns), Channel Islands, or Isle of Man are not coded as UK/GB in the variable CRY12 (previously CRY01).

(1-12) Number for the month e.g. 1 for January, 2 for February etc

FREQUENCY: Each quarter from JM08.

When comparing the Welsh language questions to those from other sources (including the 2011 Census results), it is important to remember that differences in sampling, mode of interview, and questionnaire design may cause differences between estimates. The Welsh language questions are preceded by questions on national identity which may cause respondents to be more inclined to say that they spoke Welsh than on another survey which had a different topic preceding the Welsh language question.

As of JM15, only respondents aged 3 and over are asked the Welsh language questions. This is in line with the census.

NEW GEOGRAPHIES

From January 2023 there are additional geography variables to take account of the 2021 Census. For now, both 2011 and 2021 Census geography variables will be made available on LFS/APS microdata. Most variables are unchanged due to this change, apart from geographies like CTY and WARD. Differences between the 2011 and 2021 variables will only be evident for England and Wales areas, and any information for Scotland and Northern Ireland contained in the new Census 2021 variables will still be related to the 2011 Census.

Both versions of the variables are supported by ONS geography and are sourced from the NSPL and use GSS standard codes (9 digits).

Rewighted datasets (pre-2023) do not contain any of the 2021 census geographies, but if Governments users wish to merge these onto earlier periods, a postcode look up file can be requested.

In 1996 URESMC showed DNA cases when tables were run at household level. These were for nonresponding individuals in a responding household. From 1997, these non-responders were given the URESMC value of the household so that no DNA's showed up.

LOCAL GOVERNMENT REORGANISATION IN APRIL 2009

In April 2009, there was a reorganisation of local government that created nine new unitary authorities (UAs). Five of these UAs were created from existing county councils and their district councils. The remaining four were created by splitting Cheshire and Bedfordshire into two - each along existing district council boundaries. All nine unitary authorities will, therefore, be aggregates of existing local authorities.

(Note: Isles of Scilly also changes from 15UH to 00HF at this time)

Currently these variables are produced on the LFS using UA/LAD data:

UALA, UACNTY, UALADGB, UALD3, UALDO, UALDWK, UALDWK2 (UALD3 is only on ONS datasets)

To apply these changes to back data syntax can be used to recode the above variables into new variables representing these new classifications. This syntax can be obtained by contacting the UK Data Archive. This syntax will need to be used for all files up to AJ10 data. From AJ10 data onwards we will be producing quarterly datasets with the new UA variables on them.

PLEASE NOTE: The LFS data will be weighted based on the old UALAD codes until population estimates are provided on the new UALAD basis, this change is likely to occur in JM12. Once this change occurs only the new UALAD variables will be provided and the old codes will no longer be produced for the data. When this change occurs details will be published in the User Guide.

RESTME - Length of time at this address

- (2) 12 months but less than 2 years**
- (3) 2 years but less than 3 years**
- (4) 3 years but less than 5 years**
- (5) 5 years but less than 10 years**
- (6) 10 years or longer**

FREQUENCY: Each quarter from Spring 96 **COVERAGE:**

Applies to all respondents.

NOTES: This variable which replaces RESLNO is a result of the GSS Social Survey Harmonisation Project.

The question relates to address rather than place. It may be possible that an individual is living at a different address from 12 months ago but is living in the same town and county.

Babies under a year are code 1.

ALL students living in Halls of Residence should be given the same code as the 'head of household'.

This question must be asked of economically inactive respondents aged 70 and over.

Absences from the address which by their nature are temporary, i.e. without permanent intent are ignored. For example, a person now aged 22 who was born at this address, and whose only absence was when he went to university for three years at the age of 18 is recorded as having lived at the address for 22 years - code 6 '10 years or longer'.

RESMTH - Months at this address

(0 - 11) Months

FREQUENCY: Each quarter from Spring 96

COVERAGE: Applies to all respondents who have lived at their address less than 12 months (RESTME = 1).

NOTES: RESMTH and RESBBY are used to identify babies born less than 3 months ago (i.e. between survey waves).

RESBBY - Whether respondent is baby

- (1) Yes
- (2) No

FREQUENCY: Each quarter from Spring 96

COVERAGE: Applies to all respondents who have lived at their address less than 3 months (RESMTH <3).

NOTES: RESMTH and RESBBY are used to identify babies born less than 3 months ago (i.e. between survey waves).

M3CRY - Place of residence 3 months ago

- (1) UK
- (2) Somewhere else

FREQUENCY: Each quarter from Spring 92 to Winter 95. Spring quarters only from Spring 96

COVERAGE: Spring quarters only Spring 92 - Spring 94: Applies to all respondents who have lived at their address less than 3 months (RESLNO = 6).

Non Spring quarters Summer 92 - Winter 94: Applies to all respondents who have lived at their address less than 3 months (RESLEN = 2).

Each quarter from Spring 95 - Winter 95: Applies to all respondents who have lived at their address less than 3 months (RESLNO = 6).

Each quarter from Spring 96 onwards: Applies to all respondents who have lived at their address less than 3 months AND they are not a baby born within the last 3 months (RESMTH < 3 AND RESBBY ≠ 1).

NOTES: If filtering on a specific country other than the UK then the relevant category of M3CRYO should also be filtered on. RESMTH and RESBBY were introduced in Spring 96 to identify babies born less than 3 months ago (i.e. between survey waves).

Residence in England (921), Wales (924), Scotland (923), Northern Ireland (922), Jersey (832) and the Isle of Man (833) should all be coded to UK (1).

Please see the note at the beginning of this user guide relating to historical quarterly specific questions.

In all quarters between Spring 92 & Winter 93, and in Spring 94, Summer 95, Autumn 95 & Spring 96 option 23 is 'Baby under 1 year'.

It should be noted that although a respondent was living at a different address 3 months ago, they could still be living in the same town or county.

This is a derived variable, please see User Guide Volume 4 for further guidance.

OYEQM3 - Whether living at same address 12 months ago

- | |
|------------------------|
| (1) Yes, same place |
| (2) No, somewhere else |
| (3) Baby under 1 year |

FREQUENCY: Spring quarters only from Spring 92

COVERAGE: From Spring 92 to Spring 95: Applies to all respondents who have lived at their address less than 3 months (RESLNO = 6).

Each quarter from Spring 96 onwards: Applies to all respondents who have lived at their address less than 3 months AND they are not a baby born within the last 3 months (RESMTH < 3 AND RESBBY ≠ 1).

NOTES: Although the coverage of this variable seems contradictory at first glance it is in fact referring to the address the respondent was living at prior to their current address. For example, if the respondent is currently living in Bristol but three months ago was living in Bognor this variable checks whether the respondent was living in Bognor 12 months ago.

It should also be noted that the same circumstances apply if the respondent is living at a different address from 12 months ago but is still living in the same town or county.

FREQUENCY: Spring quarters only from Spring 92

COVERAGE: Applies to all respondents who were living outside the UK 12 months ago (OYCRY = 2).

NOTES: Text labels are not available for this variable. When filtering on a specific country also filter on Option 2 *Somewhere else* in OYCRY.

It should be noted that from Spring 92 to Winter 92 codes were from 1-95, then from Spring 93 they were increased to 116, from Spring 98 to 135 and from Spring 99 to 144, this is for SOEC purposes as a number of countries were not uniquely identifiable. *Note the change in coding for *At sea/in the air* and *Stateless* in from Spring 93, Spring 98 and Spring 99. New list of countries added in Spring 07.

Note that residents of in England, Wales, Scotland, Northern Ireland, Jersey and Isle of Man were coded as (1) UK in M3CRY. Interviewers are advised not to code UK (926), England (921), Wales (924), Scotland (923), Northern Ireland (922), Jersey (832) and Isle of Man (833) for M3CRYO.

RESPONSE DETAILS

CAIND - Child/Adult indicator

- (1) Adult**
- (2) Child of head of household and head of family unit**
- (3) Child of other family**
- (4) Child of head of household but not head of family unit**

FREQUENCY: Each quarter from Spring 92 **COVERAGE:**

Applies to all respondents.

NOTES: This is a derived variable; please see Volume 4 User Guide for further guidance.

CAIND identifies dependent children, i.e. aged <16 or aged 16 – 18 in full-time education and never married.

IOUTCOME - Individual outcome

- (1) Personal response**
- (2) Proxy response**
- (3) Non-response**
- (4) Child**
- (6) Data brought forward from previous quarter**
- (7) Economically inactive 70+**

FREQUENCY: Each quarter from Spring 92 **COVERAGE:**

Applies to all respondents.

NOTES: This variable is used mainly to identify whether responses obtained were given personally or by proxy. Some analysis of LFS data may be particularly affected by proxy responses, e.g. subjective questions - whether someone would like to work, or questions that are particularly difficult for proxy respondents to answer, e.g. number of actual unpaid overtime hours worked in reference week. Results of this variable therefore should be treated with caution. With regard to proxy responses there are some common sense rules. A study of proxy responses is contained in the LFS User Guide Volume 1 (Background and Methodology). Generally the questions can be asked of the main respondent provided that they are able to supply the required information and are related to the individual concerned. However, it is also acceptable for:

- a) Co-habitees to supply information about each other,
- b) Anyone whom the HOH/spouse personally asks to provide the information, e.g. a young person whose parents wish them to be the respondent,
- c) A relative, friend or health visitor may also give information where a person living alone is too old, sick or deaf to be interviewed, but only with their permission and preferably in their presence, and d) Children to be used as an interpreter if the parents do not speak English and it is felt that the child is capable of understanding and interpreting the questions.

PRXREL - Type of proxy response

- (1) **Personal response**
- (2) **Spouse/partner proxy**
- (3) **Other proxy**
- (4) **Child aged under16**

FREQUENCY: Each quarter from Spring 97 **COVERAGE:**

Applies to all respondents.

NOTES: This is a derived variable, please see User Guide Volume 4 for further guidance.

FAMILY CHARACTERISTICS

OVERESTIMATING SAME-SEX COUPLES

Prior to 2006, same-sex cohabiting couples were grouped together under a single family type (FUTYPE=3). Following the introduction of legal same-sex civil partnerships in December 2005, the variable FUTYPE6 was introduced in LFS/APS. This variable included the following ‘new’ family types:

- ✦ Same sex cohabiting couple, no children
- ✦ Same sex cohabiting couple, non-dependent children
- ✦ Same sex cohabiting couple, dependent children
- ✦ Civil Partners with no children
- ✦ Civil Partners, non- dependent children only
- ✦ Civil Partners with dependent children

From 2006 onwards it is, therefore, possible to identify both civil partner couple families and same-sex cohabiting couple families. Estimates of civil partner couple families can be derived in the same way as other family types by using the relationship to head of family (RELHFU) for analysis and counting only the heads of families (RELHFU=1). However, estimates of same-sex couple families cannot use this standard method.

Adults in same-sex couple families were historically treated as separate benefit units, and when civil partnerships were introduced, same-sex cohabiting couples continued to be treated in this way by LFS & APS. As such, both partners in a same-sex cohabiting couple are treated as being in different families. This means that for both members RELHFU=1 (i.e. both members are heads of a family). Any analysis that uses RELHFU=1 to estimate the number of families will therefore double the number of same-sex cohabiting couples. This is currently true for all LFS and APS household datasets.

In order to obtain accurate estimates of the number of families including same-sex cohabiting couples, it is best to separately identify all same-sex family types and include RELHFU in the analysis (same-sex family types are those where FUTYPE6 = 3, 14, 15, or 16). It is then possible to half the number of adults in same-sex cohabiting couples (i.e. excluding any children in same-sex couple families), to give the number of same-sex cohabiting couples. Of course, any analysis of ‘people’ in same-sex couples (adults, children or both) will not require the total to be halved.

From JM10 onwards this approach will not be required because the code used to derive RELHFU has been corrected to account for adults in same-sex couples. From JM10 onwards the standard method can be used. It is recommended to check each dataset, and the above approach will continue to be required for datasets from 2006 and 2009.

To summarise, from JM10 RELHFU is derived more accurately, which will impact FUTYPE6 and family unit analysis. Data from 2006 through to 2009 must be adjusted when looking at same-sex cohabiting couples.

FREQUENCY: Spring and Autumn quarters from Spring 06 (on household datasets only). Each quarter from Spring 2006 (on household and ONS datasets) **COVERAGE:** Applies to all family units.

NOTES: Between Spring 1996 and Spring 2006 this variable was called FUTYPE. This variable is derived from SEX, RELHFU, MARSTA, LIVWTH/LIV12W & FDPCH19. In JM21 same sex civil partners were updated to show as one family unit.

This is a derived variable, please see User Guide Volume 4 for further guidance.

EXTFU - Extended family unit

(1-17) Extended family unit number

FREQUENCY: Each quarter from Spring 96 **COVERAGE:**

Applies to all households.

NOTES: This variable identifies where distinct family units are related with one another.

A missing value (-10) at this variable represents an individual who is not related to anyone else in the household.

Respondents belonging to the same extended family unit will share the same valid response value.

This variable is derived from XR(00-15), TOTFU, SMSXFU & FAMUNIT.

This is a derived variable, please see User Guide Volume 4 for further guidance.

SMSXFU - Same sex family unit

(1-11) Family unit number

FREQUENCY: Each quarter from Spring 96 **COVERAGE:**

Applies to all family units.

NOTES: This variable redefines the family unit to include same sex partners in the same family unit. Thus, using this variable results in fewer family units in total than if using FAMUNIT.

The family hierarchical structure is based on FAMUNIT. Those people who have been coded as same sex co-habitees are put into separate family units at FAMUNIT. Therefore when any analysis is done of same sex co-habitees at family level, it shows the number of individuals rather than couples.

This variable is derived from LIVTOG / LIVWTH/LIV12W & XR(00-15).

This is a derived variable, please see User Guide Volume 4 for further guidance.

FAMUNIT - Family unit number

(1-17) Family unit number

FREQUENCY: Each quarter from Spring 92 **COVERAGE:**

Applies to all respondents.

NOTES: With the introduction of XR(00-15) from Spring 96, FAMUNIT (unique identifier for family unit) is now generated automatically. Previously, it was coded by the interviewer to identify the family groupings within the household.

RELHFU - Relationship to head of family

- (1) Head of family**
- (2) Wife/partner of head of family**
- (3) Child of head of family/other person**

FREQUENCY: Each quarter from Spring 92 **COVERAGE:**

Applies to all respondents.

NOTES: This variable was derived from MARCON & SEX up to Winter 94. From Spring 95 it is derived from MARSTT / MARSTA, LIVTOG / LIVWTH/LIV12W & SEX.

This is a derived variable, please see User Guide Volume 4 for further guidance.

Dependent children are all those aged 0-15 and those aged 16-18 who are in full-time education. Dependency of a child is a family concept. If this variable is run at a household level it is not certain on whom the child is dependent. By running this variable at the family level or at the person level selecting on heads and wives of heads of family units (both of whom the child is dependent on) there is no chance of making claims of dependency where none in fact exist.

This is a derived variable, please see User Guide Volume 4 for further guidance.

FREQUENCY: Each quarter from Spring 05 **COVERAGE:**

Applies to all respondents.

NOTES: The 'inactive' categories for this variable have been expanded to give a better indication as to the reasons behind inactivity. The underlying variables NOLOOK and NOWANT have also been replaced by the new variable NOLWM.

This variable is the standard economic activity variable and should be used for consistency with current ONS practice as it gives the International Labour Organisation (ILO) standard definitions of employment, unemployment and economic activity and inactivity.

This is a derived variable and due to the changes in Government Training schemes has been updated for

2012; please see Volume 4 User Guide for further information.

ILODEFR - Basic economic activity (ILO definition) (reported)

- (1) In employment
- (2) ILO unemployed
- (3) Inactive
- (4) Under 16

FREQUENCY: Each quarter from Autumn 93 **COVERAGE:**

Applies to all respondents.

NOTES: With the removal of the Census Matrix Edit ILODEFR supersedes the variable ILODEFA.

This variable is derived from AGE & INECAC05.

The variable INECACR is replaced by INECAC05 in the derivation of this variable from Spring 05 onwards. This variable amalgamates the main headings of INECAC05.

From Spring 96, when analysing economic activity at family unit or household level, INECACR should be used because ILODEFR does not have a DNA category.

The ILO unemployment rate is ILO unemployed as a percentage of the economically active.

This is a derived variable, please see User Guide Volume 4 for further guidance.

PRIVATE OR PUBLIC SECTOR

For this survey, the public sector is defined as that owned, funded or run by central or local government, and the 'private' sector as everything else. The private sector includes:

- Public limited companies (PLC), companies that are quoted on the stock market and have shareholders.-
- Limited companies (Ltd). Small businesses often owned by one or more individuals. These may also be referred to as private limited companies.
- Self-employed individuals; sole traders, or owners of small shops or businesses.
- Charities, private trusts, housing associations or other voluntary organisations.
- Trade Unions (employees of).

Some respondents may not know whether their industry is in the 'public' or 'private' sector and, for certain types of activity, there may be no clear answer. The following guidelines are used to help sort out some common confusions.

Schools, depending on the type, may fall into one of several categories. For example: a

local authority school

SECTRO03 coded 4 at an 'opted-out school'

SECTRO03 coded 5 (a FE college is also 5) a private school

SECTRO03 coded 7

Most private schools (including so-called 'public schools') are charities.

Private contractors SECTOR coded 1 (this applies even if they work exclusively for the public sector, e.g. a cleaning firm, catering firm or freelance consultant working for a government department or local authority).

Self-employed individuals SECTOR coded 1

Sole traders SECTOR coded 1

Businesses owned by an individual SECTOR coded 1

Doctors and dentists (and others working in their practices) are coded according to whether the practice is *mainly* NHS or private. (GPs are technically self-employed even when they work exclusively for the NHS but, for the purpose of this question, they are to be treated as working for the NHS if that is what they mainly do). This means:

mainly private work SECTOR coded 1 mainly NHS work SECTOR coded 2 and SECTRO03 coded 6 'Health

authority or NHS Trust'

Private Hospital SECTOR coded 1

Churches SECTRO03 coded 9 'some other kind of organisation'.

Charities SECTRO03 coded 7

Trade Unions SECTRO03 coded 7

Government funded bodies and agencies SECTRO03 coded 3 'central government, civil service'. This includes the Benefits Agency, the Employment Service, Research Councils, the British Council, National Museums and Art Galleries, and prisons.

Armed forces were previously coded with 'central government, civil service'. From Spring 03 they have their own code 'SECTRO03 coded 8'. Public bodies with a greater **degree of autonomy than the above** SECTRO03 coded 2 'a nationalised industry or state corporation'. This includes Post Office, Royal Mint, British Rail, BBC, Audit Commission, Equal Opportunities Commission, Civil Aviation Authority

A private firm SECTOR coded 1

Deregulated bus service SECTRO03 coded 2

London Regional Transport and –

municipal bus companies are *public* corporations

Magistrates Courts SECTRO03 coded 4 'local government or council'.

Probation Service SECTRO03 coded 4 'local government or council'

Training and Enterprise Councils (TECs) and Local Enterprise Councils (LECs) SECTOR coded 1 'private firm or business'

PUBLICR - Whether working in public or private sector (reported)

(1) Private sector

(2) Public sector

FREQUENCY: Each quarter from Autumn 93

COVERAGE: Applies to all respondents who are in employment.

NOTES: With the removal of the Census Matrix Edit PUBLICR supersedes the variable PUBLIC.

This variable identifies the split between the public and private sector. This is a derived variable; please see Volume 4 User Guide for further guidance.

SECTOR - Whether working for private firm or business

Summer 93 to Winter 96

- (1) Private firm or business**
- (2) A limited company**
- (3) Some other kind of organisation**

Spring 97 onwards

- (1) A private firm or business or a limited company**
- (2) Some other kind of organisation**

FREQUENCY: Each quarter from Summer 93

COVERAGE: Applies to all respondents currently in work or on work training.

NOTES: This variable is used to help identify the split between public and private sector employment.

Note that the emphasis is on the organisation the person works - not the individual roles/jobs carried out by the individual.

SECTRO03 - Type of non-private organisation

- (1) A Public limited company (plc)**
- (2) Nationalised industry or state corporation**
- (3) Central Government or Civil Service**
- (4) Local government or council (incl. police, fire services & local authority controlled schools or colleges)**
- (5) A university, or other grant funded educational establishment (include opted-out schools)**
- (6) A health authority or NHS trust**
- (7) A charity, voluntary organisation or trust**
- (8) The armed forces**
- (9) Other kind of organisation**

FREQUENCY: Each quarter from Spring 03

COVERAGE: Applies to all respondents who don't work for a private firm or business or a limited company (SECTOR = 2).

NOTES: This variable replaces SECTRO.

This variable expands on 'Other kind of organisation' from SECTOR. It is one of the variables used to create a split between public & private sector employment (see PUBLIC). The aim is to get a split between the public & private sector; not necessarily an accurate split between each category listed. A small number of self-employed respondents get classified into categories of SECTRO03 which are public sector. However, they are classified correctly in PUBLIC as private sector.

'Codes 1 & 7 = Private and 2 to 6 & 8 & 9 = Public'.

OCCUPATION

SOC20M - Occupation (main job)

SOC2010-based NS SEC comprised 9 Analytic classes, 17 Operational categories and 32 Operational sub-categories. Under SOC2020 the operational sub-categories have been discontinued. The NS SEC Steering Group suggest that, conceptually, such level of detail is increasingly difficult to maintain and is little used.

The previous LFS variable NSECM10 comprised 40 output categories drawn from both operational levels. Under SOC2020 this is reduced to the 17 (full) operational categories.

For time-series purposes it will be possible to create the SOC2020-based NS SEC structure retrospectively on SOC2010-era data. It will not be possible to re-create the 40 category SOC2010 structure on SOC2020based data.

ACTWKDY(1-7) - Days scheduled to work

- (1) **Monday**
- (2) **Tuesday**
- (3) **Wednesday**
- (4) **Thursday**
- (5) **Friday**
- (6) **Saturday**

FREQUENCY: Each quarter from Spring 2000 to Autumn 2000 (on ONS datasets only). Each quarter from Winter 2000

COVERAGE: Applies to all respondents working during reference week or on government scheme.

NOTES: In AJ10 some amendments were made to the LFS questionnaire in order to improve the collection of data on days taken off due to sickness absence. Prior to AJ10, respondents who were employed but had been off for the whole reference week (or longer) were stating at ACTWKDY that they were not working and so didn't get asked ILLWK or ILLDAYS1-7. A check was introduced at the question ACTWKDY with the purpose of increasing the number of people either self-employed or off work for reasons of sickness or injury disclosing their scheduled work days. Despite improving the accuracy of the data collected the required changes resulted in a discontinuity in the time series. The introduction of the check has led to an increase in people reporting five days or more sickness absence who were previously being missed.

Please note that this is a multi response variable. Please see the note at the beginning of this User Guide regarding this type of variable.

HOURS

Structure of LFS hours variables – hours worked per week

When conducting analysis of hours worked there are three elements to consider:

- (6) whether to use usual or actual hours worked;
- ii) whether to include or exclude paid and unpaid

overtime; iii) whether to include hours worked in second jobs.

The table below shows which LFS variables are available to provide this information. Second job information is only available for actual hours including overtime. In general it is recommended that the derived variables are used because these include all respondents. The derived variables TOTHR and SUMHRS both measure total hours worked in main and second jobs, but are derived in different ways and give slightly different results. SUMHRS is available from Spring 1995 onwards and should be used in preference to TOTHR.

	People who Never work overtime	People who work overtime	Derived variables - all people
Usual hours – main job Total usual hours excluding overtime Usual paid overtime Usual unpaid overtime Total usual hours including overtime	TOTUS1	USUHR POTHR UOTHR TOTUS2	BUSHR TTUSHR
Actual hours – main job Total actual hours excluding overtime Actual paid overtime Actual unpaid overtime Total actual hours including overtime	TOTAC1	ACTHR ACTPOT ACTUOT TOTAC2	BACTHR TTACHR

If the respondent is away from their job/government training scheme, or off sick in the whole of the reference week, then TOTHRS = 0.

This is as derived variable; please see Volume 4 for further guidance. This variable includes any hours worked in a second job.

As hours are not stored as whole numbers users should use 1 decimal place when 'ranging' hours, i.e. 1 – 30 hours should be ranged as 1.0 – 30.4 etc.

YLESS20a Reason worked fewer hours than usual in reference week

- (1) **Number of hours worked/overtime varies**
- (2) **Bank holiday**
- (3) **Maternity**
- (4) **Paternity leave**
- (5) **Adoption leave**
- (6) **Shared parental leave**
- (7) **Unpaid parental leave**
- (8) **Other leave/holiday**
- (9) **Sick or injured**
- (10) **Attending a training course away from own workplace**
- (11) **Started new job/changed jobs**
- (12) **Ended job and did not start new one that week**
- (13) **Laid off/short time/work interrupted by bad weather**
- (14) **Laid off/short time/work interrupted by labour dispute at own workplace**
- (15) **Laid off/short time/work interrupted by economic or other causes**
- (16) **Off season**
- (17) **Time off to deal with an emergency**
- (18) **Other personal family reasons**
- (19) **Other reasons**

FREQUENCY: Each quarter from Winter 05

COVERAGE: Applies to all respondents who are employees, self-employed, unpaid family workers and those on employer based government schemes who worked fewer hours than usual in the reference week (including none).

This variable replaces YLESS6

NOTES: Most of the responses are self explanatory, however additional detail for some are shown below.

Maternity/Paternity leave – only respondents who are on the special period of maternity leave that is allowed by law are included here. Any other leave for reasons of child-bearing or child rearing are coded as “other reasons”.

Attending a training course away from own workplace – this applies only to respondents who are undergoing education or training outside the workplace. Respondents who are not working because of a training course inside the workplace are coded as “other reasons”

Laid off/short time/work interrupted by labour dispute at own workplace – This code is only used for respondents directly involved in a labour dispute (strike) at their own workplace. This could involve being either “called out” or “laid off” because of a labour dispute in the respondents own workplace.

Laid off/short time/work interrupted by economic and other causes – applies to respondents who were not working for technical or economic reasons: e.g. shortage of orders (economic reason) or because production at their workplace was impeded by a shortage of material supplies (e.g. caused by a labour dispute outside the respondents workplace or at another firm halting supplies). In the latter case the respondent would not be personally involved in the labour dispute.

This variable has information brought forward for some cases from the previous quarter (those with and IOUTCOME value of 6), therefore care needs to be taken as if for example the respondent previously answered the main reason being a bank holiday they may have this response this quarter, even though there may not be a bank holiday.

Between Spring 1992 and Winter 2005 this variable was called YLESS.

From Winter quarter 2019, answer (14) was amended from 'Other reasons' to 'Other reasons – please specify'. In AJ19, this was changed back to 'Other reasons'.

EMPLOYMENT PATTERN

SHFTWK99 - Whether shift work done in respondents main job

- (1) Most of the time**
- (2) Occasionally**
- (3) Never**

FREQUENCY: AJ quarters only from Spring 99

COVERAGE: Applies to all respondents in employment excluding college based government schemes.

NOTES: This variable replaced SHFTWK. The wording of the response categories has been altered in order to obtain better quality data.

Please see the note at the beginning of this user guide relating to historical quarterly specific questions.

SHFTYP - Type of shift pattern

- (1) Three-shift working**
- (2) Continental shifts**
- (3) Two-shift system with "earlies" and "lates"/double day shifts**
- (4) Sometimes night and sometimes day shifts**
- (5) Split shifts**
- (6) Morning shifts**
- (7) Evening or twilight shifts**
- (8) Night shifts**
- (9) Weekend shifts**
- (10) Other type of shift work**

FREQUENCY: All waves for AJ quarters, Wave 1 only for other quarters.

COVERAGE: Applies to all respondents in employment who may do shift work (SHFTWK99 = 1 or 2).

NOTES: The shift work categories are defined below:

Three-shift working – the day is divided into three working periods – morning, afternoon and night. This kind of shift work usually, but not always, involves one or more weeks of mornings, followed by one or more weeks of afternoons, followed by one or more weeks of nights.

Continental shifts – this is a continuous three-shift system that rotates rapidly e.g. three mornings, then two afternoons, then two nights. Usually there is a break between shift changes.

Two-shift system with earlies and lates or double day shifts – normally two shifts of eight hours each, e.g. 0600-1400 and 1400-2200. Shifts are usually alternated weekly or over longer intervals.

Split shifts – these are full shifts divided into two distinct parts with a gap of several hours in between. Used in industries where peak demands are met at different times of the day e.g. catering, passenger transport and service industries.

Morning shift – if this is full-time, most commonly 0600-1400. This code is used if the morning shift is the only shift worked or worked part time during the morning.

Evening shift – if this is full-time, most commonly 1500-2400. Also used for a part-time shift 1700-2100 or 1800-2200. Part-time evening shifts are usually called twilight shifts.

Night shift – if this is full-time, most commonly 1800-0600, and usually continuing after midnight. This code is used only for permanent night work.

Weekend shift – this code is used for work during Fridays, Saturdays, Sundays (0600-1800), when there is no other work.

Other type of shift work – this code is only used when none of the above apply.

Please see the note at the beginning of this user guide relating to historical quarterly specific questions.

FLED10 - Type of agreed work arrangement

- (1) **Flexible working hours (Flexitime)**
- (2) **Annualised hours contract**
- (3) **Term time working**
- (4) **Job sharing**
- (5) **Nine day fortnight**
- (6) **Four and a half day week**
- (7) **Zero hours contract**
- (8) **On-Call Working**
- (9) **None of these**
- (10) **Don't know**

FREQUENCY: AJ, OD or wave 1 only from Spring 2010. All quarters and all waves from 2020.

COVERAGE: Applies to all respondents in employment, excluding those on college-based schemes.

NOTES: This is a derived variable, please see User Guide Volume 4 for further guidance.

This variable replaced FLED9D in 2010.

This variable is derived from FLEX10. The categories are defined as below:

Flexible working hours – Employees can vary their daily start and finish times each day. Over an accounting period (usually four weeks or a calendar month) debit and credit hours can be carried over into another accounting period. Variable start and finish times on their own are **not** enough for a flexitime system. There must also be a formal accounting period.

Annualised hours contract – The number of hours an employee has to work are calculated over a full year. Instead of say, 40 hours per week, employees are contracted to say 1900 hours per year (after allowing for leave and other entitlements). Longer hours are worked over certain parts of the year ~~and~~

shorter hours at other periods. Variations in hours are related to seasonal factors or fluctuation in demand for the companies goods or services.

Term time working – Respondents’ work during the school or college term. Unpaid leave is taken during the school holidays, although their pay may be spread equally over the year.

Job sharing – This is a type of part time working. A full-time job is divided between, usually, two people. The job sharers work at different times, although their may be a changeover period.

Both nine day fortnights and four and a half day weeks working arrangements involve the 5 day working week being compressed into fewer full days. Such arrangements refer to **full-time** working only.

Nine day fortnight – involves individual employees having one day off every other week. The actual day off may vary so long as the employee keeps to an alternating pattern of one 5 day week followed by one 4 day week.

Four and a half day week – Typically involves the normal working week finishing early on Fridays. The short day need not necessarily be Friday, but this is the most obvious and common day.

Zero hours contract – is where a person is not contracted to work a set number of hours, and is only paid for the number of hours that they actually work.

In most cases a respondent who works any of these particular type of shift patterns will recognise the term and will require no further explanation. Where a respondent asks what is meant by the term it is unlikely they work such shift patterns and are generally coded as (8) or (9).

Please see the following [article](#) that explains how the LFS estimates zero hour contracts.

FLEX10(1-3) - Type of agreed work arrangement

- (1) Flexitime (Flexible working hours)
- (2) Annualised hours contract
- (3) Term-time working
- (4) Job sharing
- (5) Nine-day fortnight
- (6) Four-and-a-half day week
- (7) Zero hours contract
- (8) On-call working
- (9) None of these

FREQUENCY: All quarters and all waves from 2020 until December 2021.

COVERAGE: Applies to all respondents in employment excluding those on certain government schemes.

NOTES: This variable replaced FLEX9D(1-3) in 2010, which, in turn, replaced NINDAY which was discontinued from 1993. Respondents may give up to three responses. Prior to Spring 97 this variable was coded FLEX9D(0-2). Option 9 ‘Don’t know’ has been removed from Spring 04.

See FLED10 for definitions of the individual categories.

Please be aware that between the first quarter of 2004 and JS13, there was a check in the questionnaire that did not allow respondents to say that they worked shift work at SHFTWK99 and then go on to say that they worked zero hours at FLEX10. However, as SHFTWK99 is only asked in wave 1 and in AJ, this check only affected AJ respondents and all wave 1 respondents.

From JS13 onwards, this check has been removed i.e. zero hours contracts and shift work are no longer deemed incompatible.

Analysts should be aware of this when doing any analysis surrounding zero hours contracts and are advised to restrict their analysis to OD quarters. Please note that this does not affect data sets prior to 2004 and after AJ13.

Please see the following [article](#) that explains in further detail how the LFS estimates zero hour contracts.

Please see the note at the beginning of this user guide relating to historical quarterly specific questions.

Please note that this is a multi response variable. Please see the note at the beginning of this User Guide regarding this type of variable.

FLEX22(1-3) - Type of agreed work arrangement

- (1) Flexitime (Flexible working hours)**
- (2) Annualised hours contract**
- (3) Term-time working**
- (4) Job sharing**
- (5) Condensed/compressed hours**
- (6) Zero hours contract**
- (7) On-call working**
- (8) None of these**

FREQUENCY: All quarters and all waves from January 2022.

COVERAGE: Applies to all respondents in employment excluding those on certain government schemes.

NOTES: This variable replaces Flex10 in January 2022, which replaced FLEX9D(1-3) in 2010, which, in turn, replaced NINDAY which was discontinued from 1993. Respondents may give up to three responses. Prior to Spring 97 this variable was coded FLEX9D(0-2). Option 9 'Don't know' has been removed from Spring 04.

The categories are defined as below:

Flexible working hours – Employees can vary their daily start and finish times each day. Both nine day fortnights and four and a half day weeks working arrangements involve the 5 day working week being compressed into fewer full days. Such arrangements refer to **full-time** working only.

Condensed/compressed hours - Compressed hours are when the week's work is compressed into a shorter time span. So, for example, you may currently work 40 hours over five days. This could

compressed into four days of 10 hours or three and a half days of 11 or 12 hours per day. Some employees arrange their working time over a nine day fortnight

Zero hours contract – is where a person is not contracted to work a set number of hours, and is only paid for the number of hours that they actually work.

In most cases a respondent who works any of these particular type of shift patterns will recognise the term and will require no further explanation. Where a respondent asks what is meant by the term it is unlikely they work such shift patterns and are generally coded as (8) or (9).

In Autumn 97, incorrect routing of Northern Ireland respondents meant that only those who answered yes to TUPRES were asked UNION. Therefore, there was under-response of unknown size to UNION. Those who should have been asked UNION but were not have been coded 9 'Not answered' (1,350 cases).

FREQUENCY: Each quarter from Spring 92

COVERAGE: Applies to all respondents in employment who have a regular additional job.

Note regarding discrepancies in group totals between the SMSOC20 variables

The standard LFS SOC variables, those relating to the occupation of the respondent e.g. SOC20M, are always coded to four digits (SOC unit level). The four-digit codes are then aggregated to produce the higher level variables e.g. the three-digit SC20MMN 'SOC2020 Main Job Minor Group' and the one-digit SC20MMJ 'SOC2020 Main Job Major Group'. With the Social Mobility SOC variables the method is different.

The question asked of the respondent is 'What was the occupation of main earner in your household when you were 14 years old?'. We aim to code this occupation to the full four digits but sometimes the respondent simply cannot supply enough information about the occupation in question to make this possible. In such situations we accept coding to three digits and if this is not possible to one digit only.

Notice should therefore be taken of the 'not coded' category in the four digit (SMSOC204) and three digit (SMSOC203) outputs.

SMERESE – Whether main wage earner was an employee or self-employed

FREQUENCY: JS quarters only from JS16

COVERAGE: Applies to those who answer 1-4 to SMEARNER

NOTES: As with all new questions, the social mobility questions are subject to ONS monitoring of responses for several quarters, and should therefore be treated with caution.

EDUCATION AND TRAINING

As part of the wider 'Education and Training Review', the LFS education section has been subject to various workshops, user consultation and testing over the past 18 months with the aim of redeveloping the education section and improving data collection. BIS commissioned the National Centre for Social Research (NatCen) to conduct some testing and the results from this work fed into the annual testing conducted by ONS in a cognitive interviewing exercise and a full dress rehearsal.

The 2011 Dress Rehearsal sees the inclusion of a revised education and qualifications section. The new section has been ordered chronologically and will broadly cover:

- ✦ Qualification gained from outside the UK
- ✦ Qualifications gained from school or home schooling

- ✦ Qualifications gained from college or university
- ✦ Qualifications gained from work
- ✦ Qualifications gained from a government scheme
- ✦ Qualifications gained in some other way
- ✦ Qualifications that the respondent is currently working towards

A new Qualifications and Credits Framework (QCF) was introduced in late 2008. The QCF is replacing all existing vocational qualifications with re-named qualifications. QCF qualification titles are branded only in terms of Level (level 1-8) and Size (award, certificate, diploma) of achievement, as well as the subject. There is no mention of the QCF. However, some qualification titles may make reference to the previous branding (e.g. BTEC, NVQ, City and Guilds, etc). Education questions have been changed to allow these new qualifications to be recorded.

Degree qualifications: First degrees including Bachelor of Arts (BA) and Bachelor of Science (BSc). Some first degrees are awarded with honours and classified as first class, second class etc. These remain as first degrees and should not be confused with higher degrees (Mas, PhDs etc.). However, Mas from Scottish Universities (other than Strathclyde), Oxford and Cambridge are classified as first degrees.

BTEC, BEC and TEC Certificates and Diplomas: BEC (Business Education Council) and TEC (Technical Education Council) qualifications have replaced ONC/OND and HNC/HND qualifications.

CSE/GCSE: Note that a CSE grade 1 is the equivalent of an O-level and is coded as such. All GCSE's irrespective of grade are coded as such.

Scottish Qualifications: Abbreviations for the Scottish equivalents of BTEC, BEC and TEC and A and O levels are included. From 1985 SCOTBEC and SCOTEC have been merged to form SCOTVEC (Vocational Educational Certificate). This qualification can be a higher certificate, a national certificate, or a national certificate module.

A system of national vocational qualifications called NVQs (SVQs in Scotland) are comprised of levels which are subdivided into units. A list of the qualifications which make up the relevant NVQ levels is shown in Volume 5 (LFS Classifications) of the LFS User Guide.

In Spring 1996 & Spring 2004 the educational qualifications questions in the LFS were changed to provide more detailed information. Inevitably such improvements in data can lead to discontinuities. The changes made to these questions were sufficiently large enough to warrant a change in name. Please see individual variable notes for details.

Please note that due to an error in the routing to the education section in the JM11 and AJ11 questionnaires, the education section which should have been asked of those aged 16-69 or older and in employment was only asked of those aged 16-64 or older and in employment. 65-69 year olds who should have been asked these questions were not and there will be more missing education data in JM11, AJ11 (and some impact on JS11 for DBF cases). This issue should stop impacting the data from OD11.

From JM11 we collect more information on foreign qualifications that are recognised in the UK ;we can use this to assign more accurate levels of highest qualification. Therefore a large number of respondents who previously ended up as 'other' on the HIQUAL and LEVQUAL DV's are now assigned to appropriate qualifications/levels. This means that there is a clear break in the education time series as we see the numbers classified as 'other' dropping and from JM11 and certain qualification/levels absorbing these cases which are now assigned to a qualification/level. This should improve the accuracy of the data but affects the comparability of qualifications over time.

COVERAGE: Applies to all respondents who have taken part in job-related education/training in the last 4 weeks (ED4WK = 1 OR FUTUR4 = 1).

In Winter 93/94 although the coverage for TRONJB appears to be incorrect in the questionnaire the data is correct.

- (80) Don't know

FREQUENCY: Each quarter from JM11

COVERAGE: Applies to all respondents of working age (16-69) or those in employment with qualifications (including respondents aged 70-99).

NOTES: This variable replaces HIQUAL8. From JM11, more information on foreign qualifications was collected. Therefore a large number of respondents who previously ended up as 'other' on the HIQUAL and LEVQUAL DV's are now assigned to appropriate qualifications/levels. Please see Volume 4 User Guide for further information.

Analysts should be aware of the following when analysing this variable.

Prior to OD13, if a respondent was in the age group 65-69, not in work and had stated at SCQUAL/UNIQUAL/WOQUAL/GSQUAL/OTQUAL that they had an NVQ or GNVQ, they would not have been routed to the questions that look in further detail at these qualifications (such as QGNVQ). As a result of this, HIQUAL11 coded these people as -8s. This has been rectified from OD13 onwards.

This variable has been replaced by HIQUAL15 from JM15 onwards.

Please see the note at the beginning of this user guide, titled *Analysis of APS datasets*, which provides advice on analysing this variable in the APS datasets following questionnaire changes.

HEALTH AND INJURY

HEALTH PROBLEMS

The focus and number of questions on health and disability changed in Spring 1997 to reflect the provisions of the Disability Discrimination Act 1995. They are now concerned with all health problems, whilst previously the emphasis had been on problems which affect respondents work. See the June 1998 issue of *Labour Market Trends* for guidance about disability data.

From Spring 96 the frequency of disability/health questions were changed from half-yearly to quarterly. This discontinuity affected data in Spring 96, which is not consistent with any other quarters.

HPRMB - Prompt to ask health questions

- (1) **Continue**
- (2) **Too ill / distressed to answer: Visible problem**
- (3) **Too ill / distressed to answer: Other**

FREQUENCY: Each quarter from Spring 2000 to Autumn 2000 (on ONS datasets only). Each quarter from Winter 2000

COVERAGE: Applies to all respondents aged 75 and over.

HPRMB2 - Prompt to ask health questions

- (1) **Continue**

FREQUENCY: Each quarter from JM10.

COVERAGE: Applies to those who are under the age of 75

QHEALTH1 – State of respondent's health

- (1) **very good,**
- (2) **good,**
- (3) **fair,**
- (4) **bad,**
- (5) **or very bad?**

FREQUENCY: Every quarter from JS09.

COVERAGE: Applies to all respondents over the age of 15 at wave 1 or wave 5 for main LFS interviews and all waves for all LLFS/Boost/Enhancement cases.

NOTES: This variable is provided on ONS datasets only.

Please see the note at the beginning of this user guide relating to historical quarterly specific questions.

LNGLIM - Whether health problem lasting more than 12 months

- (1) **Yes**
- (2) **No**

FREQUENCY: Summer and Winter quarters only from Winter 93 to Winter 95. Each quarter from Spring 96

COVERAGE: From Spring 92 to Winter 96: Applies to all respondents of working age whose health problems or disabilities limit the kind of paid work they can do.

From Spring 97 to Winter 99: Applies to all respondents of working age.

From Spring 2000: Applies to all respondents of working age or those aged 75 and under and first contact or those aged 75 and over and are not too ill/distressed to continue.

NOTES: DNA (-9) will include people who were not contacted in the quarter this question was asked. See LFS User Guide Volume 1 (Background and Methodology) “Imputation in the LFS”, for full details. From 1997 all health sections start with LNGLIM. To get a comparison with earlier quarters prior to Spring 1997, use LIMITK = yes and LNGLIM = yes.

Users are advised to always filter on working age when using this variable, to ensure comparability over a time-series.

This question was replaced with the harmonised variable LNGLST in AJ13.

LNGLST - health conditions/illnesses lasting 12 months or more

- (1) Yes
- (2) No
- (3) Don't know (spontaneous only)
- (4) Refusal (spontaneous only)

FREQUENCY: Every quarter from AJ13

COVERAGE: Applies to all respondents of working age or those aged 75 and under and first contact or those aged 75 and over and are not too ill/distressed to continue.

NOTES: This is a harmonised question that replaces LNGLIM from AJ13 onwards.

LIMITK - Whether health problem affects the kind of paid work respondent might have done

- (1) Yes
- (2) No

FREQUENCY: Each quarter from Spring 97

COVERAGE: Applies to all respondents with health problems and those of working age or pensioners looking for work or wanting work.

NOTES: The respondents decide whether a health problem/disability limits the paid work which they can do. If respondents seek clarification, they are advised not to limit the assessment to the paid work (if any) which they do at present.

LIMITA - Whether health problem affects the amount of paid work that can be done

- (1) Yes
- (2) No

FREQUENCY: Each quarter from Spring 97

COVERAGE: Applies to all respondents with health problems and those of working age or pensioners looking for work or wanting work.

NOTES: This question records whether a disability affects the amount of paid work undertaken, or might be undertaken, by the respondent. Again this is not restricted to the respondent's current job, nor to respondents who are currently employed.

HEAL20(01-18) - What health problems does the respondent have

Spring 97 onwards

- (1) Problems or disabilities (including arthritis or rheumatism) connected with...arms or hands
- (2)legs or feet
- (3)back or neck
- (4) Difficulty in seeing (while wearing spectacles or contact lenses)
- (5) Difficulty in hearing
- (6) A speech impediment
- (7) Severe disfigurement, skin conditions, allergies
- (8) Chest or breathing problems, asthma, bronchitis
- (9) Heart, blood pressure or blood circulation problems
- (10) Stomach, liver kidney or digestive problems
- (11) Diabetes
- (12) Depression, bad nerves or anxiety
- (13) Epilepsy
- (18) Autism (including Autism Spectrum Condition, Asperger syndrome)
- (14) Severe or specific learning difficulties
- (15) Mental illness, or suffer from phobia, panics or other nervous disorders
- (16) Progressive illness not included elsewhere (e.g. cancer, multiple sclerosis, symptomatic HIV, Parkinson's disease, muscular dystrophy) (17) Other health problems or disabilities

FREQUENCY: Each quarter from Spring 92 to Winter 92. Summer and Winter quarters only from Summer 93 to Winter 95. Each quarter from Spring 96

Variable replaces Heal from 2020

COVERAGE: Applies to all respondents in employment and all other men aged 16-64 and women aged 16-59 who said that health or disability problems limit the kind of paid work they can do. (Spring 92 to Winter 94: LIMITT = 1 AND LNGLIM = 1; From Spring 95: LNGLIM = 1; From AJ13: LNGLST=1).

NOTES: For more accurate results always use the variable HEALTH20 as it gives the respondent's main/most significant health problem and not a general problem. It should be noted that the order of health problems at HEAL20 does not necessarily give the most problematic first. Again use HEALTH20 for this information.

Respondents can give up to 18 problems. This variable was coded HEAL(00-10) from Spring 92 to Summer 93; HEAL(00-12) from Winter 93 to Winter 95; HEAL(00-14) from Spring 96 to Winter 96; HEAL(01-17) from Spring 97 and HEAL20(01-18) from 2020.

DNA (-9) will include people who were not contacted in the quarter this question was asked. See LFS User Guide Volume 1 (Background and Methodology), "Imputation in the LFS" for full details.

Code 4 - difficulty in seeing should not be considered a disability if it is effectively compensated for by wearing glasses or contact lenses.

Code 5 - difficulty in hearing should be considered without the use of a hearing aid.

Code 7 - severe disfigurements excludes those arising from tattooing or body piercing but would include scars, birthmarks, limb or postural deformation or diseases of the skin.

Code 8 - excludes hay fever (seasonal allergic rhinitis) except where it aggravates the effects of an existing condition.

Code 14 - specific learning difficulties includes conditions such as dyslexia or dyscalcula; severe learning difficulties covers mental impairments.

Code 15 - Mental illness includes a wide range of conditions related to mental functioning but should be a clinically well recognised illness. Mental illnesses that should not be included are; the tendency to commit arson or to steal, the tendency to physically or sexually abuse others, exhibitionism or voyeurism are not included.

Code 16 - Progressive illnesses should be recorded if there is some effect on the respondent's normal day to day activities, even if it is minor at the time of interview. If the respondent has been diagnosed with a progressive illness, but they are not suffering from any symptoms which affect their activities yet, then they should not be included.

Addiction to or dependency on alcohol, nicotine, drugs or other substance (unless resulting from the substance being prescribed for the respondent) should not be included.

Please note that this is a multi response variable. Please see the note at the beginning of this User Guide regarding this type of variable.

LERND - Learning difficulty or learning disability?

- (1) Learning difficulty
- (2) Learning disability
- (3) Both

FREQUENCY: AJ quarters and main only from AJ15. Each quarter from Spring 2006 – JM15.

Variable replaces Health from 2020

NOTES: This variable records the main problem ONLY. For analysis before Spring 97 please see HEALTH(0-2).

When analysing HEALTH20 users are advised to use the filter LNGLIM/LNGLST =1 before carrying out any further analysis.

HEALTH20B - Main health problem banded

HEALTH20	HEALTH20B problems or disabilities with arms	
1	or hands problems or disabilities with legs	1
2	or feet problems or disabilities with back	1

FREQUENCY: Each quarter from JS20

COVERAGE: Applies to all respondents with health problems (HEALTH20 = 1-18).

NOTES: This variable records the main problem ONLY in banded categories.

HEALIM - Whether health problem limits activity

- (1) Yes
- (2) No

(3) Don't know

FREQUENCY: Each quarter from Spring 97

COVERAGE: Applies to all respondents with a health problem lasting more than 12 months (LNGLIM = 1).

NOTES: Users are advised to always filter on working age when using this variable, to ensure comparability over a time-series.

This question was replaced with the harmonised variable LIMACT in AJ13.

When analysing HEALIM users are advised to use the filter LNGLIM=1 before carrying out any further analysis.

LIMACT - reduces ability to carry out day-to-day activities

- 1) Yes, a lot
- 2) Yes, a little
- 3) Not at all

FREQUENCY: Every quarter from AJ13

COVERAGE: Applies to all respondents who answered yes to LNGLST (LNGLST=1) **NOTES:**

This is a harmonised question that replaces HEALIM from Aj13 onwards.

HEALIM asked respondents to consider the impact of their health problem or disabilities on their day to day activities without medication or treatment. LIMACT (replacing HEALIM) asks respondents to consider the impact to day to day activities **while taking medication**.

For example, Respondent A suffers from asthma. In JM13 they answer 'yes' to HEALIM as without their medication, they would suffer breathlessness and would struggle to carry out day to day tasks. However, In AJ13, they answer 'not at all' to LIMACT because if they use their inhaler they can go about their daily life whilst experiencing no health problems.

When analysing LIMACT users are advised to use the filter LNGLST =1 before carrying out any further analysis.

ILLLNG - For how long has your ability to carry-out normal day-to-day activities been reduced?

- 1) Less than six months
- 2) Between six months and 12 months
- 3) Twelve months or more

FREQUENCY: New question from AJ11.

COVERAGE: Applies to respondents who have indicated that their health problems limit their ability to carry out normal day to day activities

NOTES: When analysing ILLLNG users are advised to use the filter HEALIM =1 before carrying out any further analysis.

REDACT - Period that day-to-day activities have been reduced

- 1) Less than six months
- 2) Between six months and 12 months
- 3) Twelve months or more

FREQUENCY: Every quarter from AJ13

COVERAGE: Applies to all respondents who answered yes a lot or yes a little to LIMACT (LIMACT =1,2).

NOTES: This is a harmonised question that replaces ILLNG from AJ13 onwards.

When analysing REDACT users are advised to use the filter LIMACT =1/2 before carrying out any further analysis.

HEALYR - Any other past health problems or disabilities that have lasted longer than a year

- (1) Yes
- (2) No

FREQUENCY: Each quarter from Spring 97

COVERAGE: Applies to all respondents of working age or those aged 75 and under and first contact or those aged 75 and over and are not too ill/distressed to continue.

NOTES: These include continuous problems, or those with only intermittent effects.

HEALYR and subsequent questions HEALPB20 and HEALYL are only asked at the first interview with a respondent, and if it is a personal interview.

Only those problems or disabilities the respondent has had in the past but no longer has are included. Any illnesses already mentioned at HEAL20 are not included.

HEALPB20(01-10) - Health problems/disabilities that affected respondent in the past

- (1) Problems or disabilities (including arthritis or rheumatism) connected with... arms or hands
- (2)legs or feet
- (3)back or neck
- (4) Difficulty in seeing (while wearing spectacles or contact lenses)
- (5) Difficulty in hearing
- (6) A speech impediment
- (7) Severe disfigurement, skin conditions, allergies
- (8) Chest or breathing problems, asthma, bronchitis
- (9) Heart, blood pressure or blood circulation problems
- (10) Stomach, liver kidney or digestive problems (11) Diabetes?
- (12) Depression, bad nerves or anxiety
- (13) Epilepsy
- (18) Autism (Including Autism Spectrum Condition, Asperger syndrome)
- (14) Severe or specific learning difficulties
- (15) Mental illness, or suffer from phobia, panics or other nervous disorders
- (16) Progressive illness not included elsewhere (e.g. cancer, multiple sclerosis, symptomatic HIV, Parkinson's disease, muscular dystrophy)
- (17) Other health problems or disabilities

FREQUENCY: Each quarter from Spring 97

COVERAGE: Applies to all respondents who have had a long term health problem/disability that has lasted longer than a year (HEALYR =1).

NOTES: The notes for HEAL20 also apply here. Respondents can give up to 10 problems. From Spring 97 to Spring 99, this variable was coded HEALPB20 (01-17). From Summer 99, this variable is coded HEALPB (01-10) and from JM20, this variable is coded HEALPB20(01-10).

Please note that this is a multi response variable. Please see the note at the beginning of this User Guide regarding this type of variable.

LERNDB - Learning difficulty or learning disability?

- (1) Learning difficulty
- (2) Learning disability
- (3) Both

FREQUENCY: AJ quarters and main only from AJ15. Each quarter from Spring 2006 – JM15.

COVERAGE: Applies to all respondents who have said that they have a severe or specific learning difficulty (i.e. HEALPB20=14).

HEALYL - Whether past health problems or disabilities limited activity

- (1) Yes
- (2) No
- (3) Don't know

FREQUENCY: Each quarter from Spring 97

COVERAGE: Applies to all respondents who have had a long term health problem/disability that has lasted longer than a year (HEALYR =1).

NOTES: If respondents were receiving medication or treatment, they are asked to consider what the situation would be without the medication or treatment.

The qualifying statement concerning medication or treatment includes:

- the use of a prosthesis i.e. any artificial device attached to the body as an aid, for example, an artificial limb, a heart pacemaker, or a hearing aid (except spectacles or contact lenses);
- the use of any other form of aid or equipment such as a wheelchair.

If someone says their condition does not have any affect on them because it is kept under control by treatment, they are still coded '1'. For example, some people take medication and experience no impairment in their quality of life as a result, but without that medication they would die.

Normal day-to-day activities are those which are carried out by most people on a daily basis, and we are interested in disabilities/health problems which have a substantial adverse effect on respondent's ability to carry out these activities.

See HEALIM for examples of ways in which a problem may affect the respondent's day to day activities.

DISEA - Disability: equality act (GSS harmonised)

- (1) (Equality act) Disabled
- (2) Not (Equality act) disabled

FREQUENCY: On LFS datasets from AJ13, but from A13M14 on APS datasets to ensure there are 12 months of data.

COVERAGE: Applies to all respondents aged 16 and over.

NOTES: The DDA disabled (current disability) category within DISCURR20, DISCURR13 and DISCURR are no longer the advised 'legal' definitions of disabilities. Users are advised to use the DISEA variable which reflects the Equality Act 2010 changes to the legal definition of disabled

Users should therefore also apply caution when using DISCURR13 post AJ13 as this is noncomparable to the DISCURR variable for periods pre-AJ13.

This is a derived variable, please see User Guide Volume 4 for further guidance.

Please see the note at the beginning of this user guide, titled *Analysis of APS datasets*, which provides advice on analysing this variable in the APS datasets following questionnaire changes.

DISCURR - Current disability

- (1) **Both (current disability) and work-limiting disabled**
- (2) **disabled (current disability) only**
- (3) **Work-limiting disabled only**
- (4) **Not disabled**

FREQUENCY: Each quarter from Spring 98 – JM13

COVERAGE: Applies to all respondents of working age and those above working age who indicate they are in work, that they are looking for work or that they would like a regular paid job.

NOTES: Disabled (current disability) includes those who have a long-term disability which substantially limits their day-to-day activities. Work-limiting disabled includes those who have a long-term disability which affects the kind or amount of work they might do.

The DDA disabled (current disability) category within DISCURR is no longer the advised 'legal' definition of current disability. Users are advised to use the DISEA variable which reflects the Equality Act 2010 legal definition of disabled, measured according to the GSS Harmonised Standard (<http://www.ons.gov.uk/ons/guide-method/harmonisation/primary-set-of-harmonised-concepts-andquestions/long-lasting-health-conditions-and-illnesses--impairments-and-disability.pdf>).

Please see notes on a discontinuity between Q4 2009 and Q1 2010 and changes made to this derived variable in 2011 on page 5 of this user guide.

Please see notes at LNGLST and LIMACT before carrying out analysis on this variable.

Please see the note at the beginning of this user guide, titled *Analysis of APS datasets*, which provides advice on analysing this variable in the APS datasets following questionnaire changes.

DISCURR13 - Current disability

- (1) **Both (current disability) and work-limiting disabled**
- (2) **disabled (current disability) only**
- (3) **Work-limiting disabled only**
- (4) **Not disabled**

FREQUENCY: Each quarter from AJ13 to OD19

COVERAGE: Applies to all respondents of working age and those above working age who indicate they are in work, that they are looking for work or that they would like a regular paid job.

NOTES: Disabled (current disability) includes those who have a long-term disability which substantially limits their day-to-day activities. Work-limiting disabled includes those who have a long-term disability which affects the kind or amount of work they might do.

The DDA disabled (current disability) category within DISCURR13 is not the most appropriate one to use. It is not comparable to the corresponding category in DISCURR, prior to AJ13, because of changes to the questions, and it no longer measures the DDA definition of disability. Neither does it measure the latest Equality Act definition of disability, which is available from the DISEA variable instead.

DISCURR13 was introduced in order to portray that the variables that feed into DISCURR changed in AJ13. Please see notes at LNGLST and LIMACT before carrying out analysis on this variable.

This is a derived variable, please see User Guide Volume 4 for further guidance.

Please see the note at the beginning of this user guide, titled *Analysis of APS datasets*, which provides advice on analysing this variable in the APS datasets following questionnaire changes.

DISCURR20 - Current disability

- (1) **Both (current disability) and work-limiting disabled**
- (2) **disabled (current disability) only**
- (3) **Work-limiting disabled only**
- (4) **Not disabled**

FREQUENCY: Each quarter from JM20

COVERAGE: Applies to all respondents of working age and those above working age who indicate they are in work, that they are looking for work or that they would like a regular paid job.

NOTES: Disabled (current disability) includes those who have a long-term disability which substantially limits their day-to-day activities. Work-limiting disabled includes those who have a long-term disability which affects the kind or amount of work they might do.

The DDA disabled (current disability) category within DISCURR20 is not the most appropriate one to use. It is not comparable to the corresponding category in DISCURR, prior to AJ13, because of changes to the questions, and it no longer measures the DDA definition of disability. Neither does it measure the latest Equality Act definition of disability, which is available from the DISEA variable instead.

DISCURR20 was introduced in order to portray that the variables that feed into DISCURR changed in JM20. Please see notes at LNGLST and LIMACT before carrying out analysis on this variable.

This is a derived variable, please see User Guide Volume 4 for further guidance.

Please see the note at the beginning of this user guide, titled *Analysis of APS datasets*, which provides advice on analysing this variable in the APS datasets following questionnaire changes.

XDISDDA - Unadjusted DDA disabled [READ NOTES BEFORE USING THIS VARIABLE]

- (1) **Current disability only**
- (2) **Current and past disability**
- (3) **Past disability only**
- (4) **Not DDA disabled**

FREQUENCY: Each quarter from Spring 98 to Winter 99 (on ONS datasets only), Each quarter from Spring 2000 to Winter 2019

COVERAGE: Applies to all respondents of working age.

NOTES: This variable is designed to help users estimate the number of people who meet the DDA definition of disability. This definition has two parts: current and past disability;

Current disability includes people who have a physical or mental impairment which has a substantial and long-term adverse effect on a person's ability to carry out normal day-to-day activities, and people with a progressive condition (e.g. cancer, multiple sclerosis) from the moment any impairment resulting from it first has some effect on their ability to carry out normal day-to-day activities.

Past disability includes people who have had a disability within the DDA definition in the past, even if they have since recovered. The LFS data on past disabilities does not include any proxy response because it is not thought that proxy respondents would be able to provide accurate information on past disabilities. Therefore users need to make an adjustment to any estimates they derive from this variable involving past disabilities. The adjustment process is described below.

Adjustment for past disabilities.

To take account of the absence of proxy data, the suggested method is to apply the same proportion of proxy response in wave 1 at HEALIM to the number of people in category 3 of XDISDDA. Thus, in Spring 1998, a table of HEALIM by IOUTCOME filtered on THISWV = 1 shows that the proportion of proxy response was 24% so the adjustment made to XDISDDA is to multiply the past disabilities only category by 100/76. So the estimate of total DDA disabled people in the UK in Spring 1998 is:

	(Thousands)
Current disability only	4,682
Current and past disability	301
Past disability only	$571 * 100/76 = 751$
Total DDA disabled	5,734

This is a derived variable; please see Volume 4 User Guide for further guidance.

XDISDDA20 - Unadjusted DDA disabled [READ NOTES BEFORE USING THIS VARIABLE]
