# Comparison of weekly death occurrences in England and Wales: up to week ending 24 April 2020

This short article accompanies the Weekly deaths release and explains the differences between various data sources that report on coronavirus (COVID-19) deaths.

## 1. Other pages in this release

- Deaths registered weekly in England and Wales, provisional: week ending 24 April 2020.
- Death registrations and occurrences by local authority and health board: week ending 24 April 2020.
- Deaths involving COVID-19 in care homes notified to the Care Quality Commission, England

## 2. Main points

- This short article accompanies the <u>Weekly deaths release for the week ending 24 April 2020</u> and explains the differences between various data sources that report on coronavirus (COVID-19) deaths.
- A total of 27,356 deaths involving COVID-19 were registered in England and Wales between 28 December 2019 and 24 April 2020 (year to date).
- On 29 April there was a change to how the Department of Health and Social Care (DHSC) reported England daily COVID-19 deaths, to include all deaths where a positive test for COVID-19 has been confirmed, wherever the death took place, rather than previously only reporting confirmed COVID-19 deaths in hospitals.
- In England, including deaths that occurred up to 24 April but were registered up to 2 May, of those we have processed so far, the number involving COVID-19 was 28,272; the comparative number of death notifications reported by DHSC on GOV.UK was 21,399 and NHS England numbers, which come from the same source as DHSC figures but are continuously updated and for deaths in hospitals, showed 19,033 deaths.
- In Wales, including deaths that occurred up to 24 April but were registered up to 2 May, of those we have
  processed so far, the number involving COVID-19 was 1,376; the comparative number of death
  notifications reported by DHSC on GOV.UK was 774 and Public Health Wales (PHW) numbers, which
  come from the same source as DHSC figures but are continuously updated, showed 849 deaths.
- In England, the number of deaths involving COVID-19 in care homes that were registered by 24 April was 5,575, while in Wales the number of deaths was 310.
- The Care Quality Commission (CQC) provides numbers of deaths involving COVID-19 in care homes in England that were notified between 10 April and 1 May, which showed 6,391 deaths, of which 2,044 occurred in the week up to 1 May.
- The Care Inspectorate Wales (CIW) provides the number of deaths involving COVID-19 in care homes in Wales that occurred between 17 March and 1 May, which showed 295 deaths, of which 68 occurred in the week up to 1 May.

# 3. Comparisons

From 29 April 2020, there was a change in the reporting of the Department of Health and Social Care (DHSC) daily coronavirus (COVID-19) deaths data. Prior to 29 April, the daily published counts of COVID-19 deaths for England accounted for deaths that had tested positive for COVID-19 in hospitals only. From 29 April, this data series has been improved by Public Health England (PHE) to include all deaths where a positive test for COVID-19 has been confirmed, wherever the death took place.

The improved data series has been reconciled back to 6 March 2020 when the first COVID-19 deaths were notified. Figures for Scotland, Wales and Northern Ireland had already begun to include deaths outside hospitals, so this change ensured that the UK-wide series has a shared and common definitional coverage. A detailed explanation of the change can be found in our <u>transparency statement</u>.

In this report we have included both the pre-29 April and improved post-29 April England COVID-19 data series in the comparisons. The improved PHE (post-29 April) data series is the series that should now be compared with the Office for National Statistics (ONS) data series. In the following weeks we will not be including the pre-29 April data series.

Figures 1 and 2 show the cumulative numbers of deaths relating to COVID-19 for England and Wales respectively, by day up to 24 April 2020, allowing comparison between the daily death counts released by the DHSC on GOV.UK; the reconciled data by date of death released by NHS England and Public Health Wales (PHW); ONS death records by date of registration; and ONS death records by date of death. Numbers produced by NHS England and PHW are the numbers supplied to the DHSC but based on date of occurrence rather than date of notification.

Figures 3 and 4 are for England only and include numbers of deaths provided by the Care Quality Commission (CQC) for deaths involving COVID-19 in care homes. Figure 5 is for Wales only and compares deaths in care homes as reported by Care Inspectorate Wales and the ONS.

### Difference between ONS, DHSC, NHS England and PHW figures

The DHSC release daily updates on GOV.UK counting the total number of deaths reported to them among patients who had tested positive for COVID-19, regardless of place of death. This covers all deaths reported up to 5pm the day before in England, Wales, Scotland and Northern Ireland wherever they occurred, if known to the public health agencies. To allow comparison with ONS figures, only the numbers for England and Wales are shown in this article.

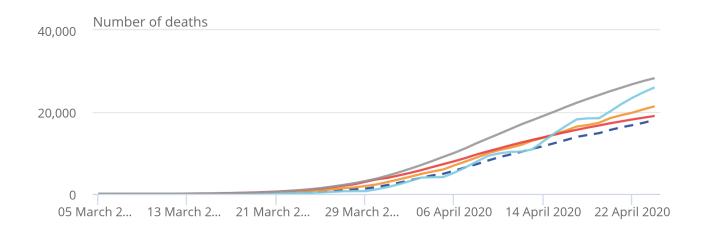

For England, up to 28 April 2020, only deaths that occurred in hospital were reported in the DHSC figures. Post-29 April, PHE provided DHSC with numbers of confirmed COVID-19 deaths wherever they took place. PHE has reconciled that series back to 6 March 2020 and we have been able to include that improved series in Figure 1. For completeness Figure 1 shows both the new (post-29 April) and old (pre-29 April) DHSC numbers. The improved post-29 April numbers should now be used to compare against the ONS numbers.

NHS England provides the <u>data on deaths in hospital in England</u> and PHW provides data on <u>deaths in Wales</u> that feed into the GOV.UK figure. NHS England and PHW also publish continuously updated series by date of death as opposed to date of notification.

The ONS provides figures based on all deaths registered involving COVID-19 according to death certification, whether in or out of hospital, for England and Wales. We also provide the figures by date of death (occurrence). More information can be found in the <u>Measuring the data</u> section of our Weekly deaths publication.

# Figure 1: The cumulative number of deaths involving COVID-19 in England using different data sources, up to 24 April 2020

Figure 1: The cumulative number of deaths involving COVID-19 in England using different data sources, up to 24 April 2020

- • Daily death counts released on GOV UK- pre 29 April reporting
- Daily death counts released on GOV•UK post 29 April reporting
- NHS England by date of death as published on 3 May
- ONS deaths by date of registration registered by 24 April

Source: Department of Health and Social Care, NHS England and Office for National Statistics

#### Notes:

- 1. Department of Health and Social Care (DHSC) figures.
- 2. NHS England figures.
- 3. Figures include deaths of non-residents.
- 4. All Office for National Statistics (ONS) figures for 2020 are provisional.
- 5. The ICD-10 definitions for the coronavirus (COVID-19) are U07.1 and U07.2.
- 6. Daily death counts are released on GOV.UK.

The DHSC number of deaths reported for 24 April where the person tested positive for COVID-19 and died in hospital and elsewhere was 21,399. This compares with 18,083 for the same period using the pre-29 April DHSC count based on only hospital deaths.

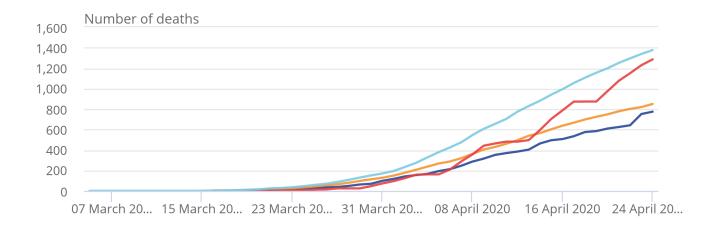

The current DHSC figure reported is 4,614 fewer than the 26,013 death registrations involving COVID-19 reported by the ONS for the same period. Both data sources have some delay from date of death to reporting.

The number of deaths occurring by 24 April and registered by 2 May was 28,272, which is 6,873 higher than the current DHSC reported number. This is because ONS figures for occurrence are based on date of death whereas the DHSC report on date of notification. The next section looks at DHSC numbers based on date of death, which are more in line with ONS occurrences.

The NHS England numbers by date of death, which come from the same source as the DHSC's numbers but are continuously updated and based on deaths in hospital only, showed 19,033 deaths by 24 April. This is 2,366 fewer than the current DHSC deaths and 9,239 fewer than ONS figures for England by date of death.

# Figure 2: The cumulative number of deaths involving COVID-19 in Wales using different data sources, up to 24 April 2020

Figure 2: The cumulative number of deaths involving COVID-19 in Wales using different data sources, up to 24 April 2020

- Daily death counts released on GOV•UK
- Public Health Wales by date of death as published on 3 May
- ONS deaths by date of registration registered by 24 April
- ONS deaths by actual date of death registered by 2 May

Source: Department of Health and Social Care, Public Health Wales and Office for National Statistics

#### Notes:

- 1. Department of Health and Social Care (DHSC) figures.
- 2. Public Health Wales (PHW) figures.
- 3. Figures include deaths of non-residents.
- 4. All Office for National Statistics (ONS) figures for 2020 are provisional.
- 5. The ICD-10 definitions for the coronavirus (COVID-19) are U07.1 and U07.2.
- 6. Daily death counts are released on GOV.UK.

Unlike the data for England no changes have been made in the reporting of COVID-19 deaths in Wales. The number of deaths reported by PHW to the DHSC by 24 April was 774 for Wales (Figure 2). This number is 511 fewer than the 1,285 death registrations involving COVID-19 reported by the ONS for the same period. Both data sources have some delay from date of death to reporting.

The number of deaths occurring by 24 April and registered by 2 May was 1,376, which is 602 higher than the DHSC reported number. This is because ONS figures for occurrence are based on date of death whereas DHSC report on date of notification. The next section looks at DHSC numbers based on date of death, which are more in line with ONS occurrences.

The PHW numbers by date of death, which are the same source as the DHSC's numbers but are continuously updated, showed 849 deaths by 24 April. This is 75 more than DHSC deaths for Wales but 527 fewer than ONS figures for Wales by date of death.

In earlier weeks for both England and Wales, the ONS registration figures were similar to the GOV.UK figures, however, the ONS registration figures overtook the GOV.UK figures and are now more in line with NHS England and PHW figures. The difference between the NHS England and PHW figures, and the ONS figures by date of death, is because of the wider coverage of the ONS figures, including deaths outside of hospital in England and those where COVID-19 was reported on the death certificate but there was no positive test. Looking at the year to date, 28.2% of deaths in England and Wales registered by 24 April involving COVID-19 occurred outside hospital (7,713 deaths).

#### **Deaths in care homes**

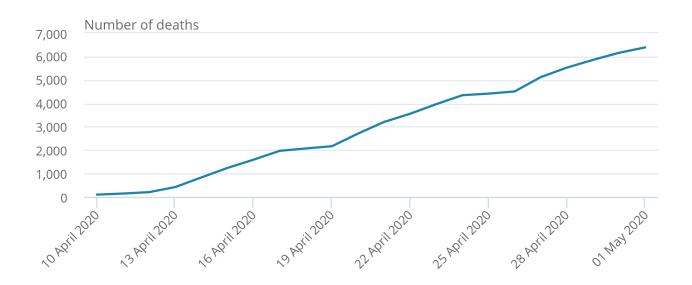

To improve the timely availability of data on deaths in care homes caused by COVID-19, the ONS and the Care Quality Commission (CQC) have agreed to publish provisional counts of deaths of care home residents in care homes in England, based on statutory notification by care home providers to the CQC.

The CQC is the independent regulator of health and social care in England. Notifications about deaths in care homes must be sent to the CQC without delay and are typically provided within two to three days of death. The data provided by the CQC are counts of deaths each day of care home residents who died in care homes, by date of notification. The data are from 10 April 2020 when CQC introduced a new method to understand whether COVID-19 was involved in the death.

A death involving COVID-19 is based on the statement from the care home provider to the CQC: the assessment of whether COVID-19 was involved may or may not correspond to a medical diagnosis or test result, or be reflected in the death certification. More information on the data provided by the CQC can be found in our <u>joint transparency statement</u>. As with ONS registrations, reduced numbers of notifications occur on the weekend.

Figure 3: The cumulative number of care home residence deaths in care homes involving COVID-19 in England

Figure 3: The cumulative number of care home residence deaths in care homes involving COVID-19 in England

Source: Care Quality Commission data published by the Office for National Statistics

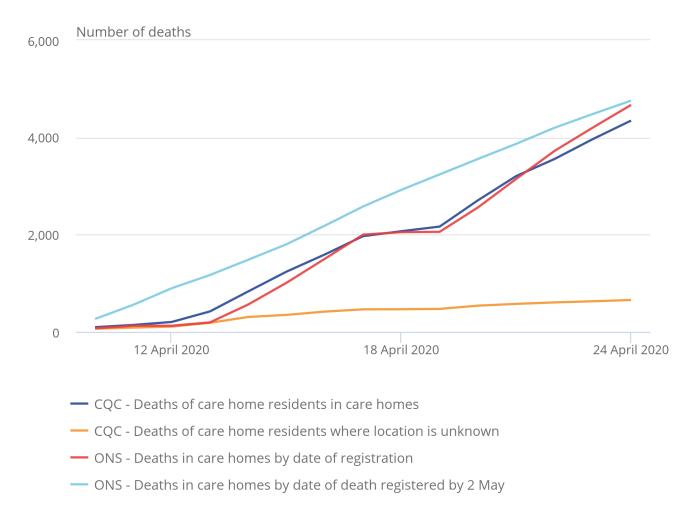

#### Notes:

- 1. Figures are for deaths that the Care Quality Commission (CQC) is notified of on the days specified. Figures only include deaths that were notified by 1 May 2020, and they may be an underestimate because of reporting delays.
- 2. Figures are for persons who were resident in and died in a care home.

On 10 April, the first day when data were collected using CQC's new method of identifying deaths involving COVID-19, there were 95 deaths of care home residents in care homes notified to the CQC. From 10 April up to and including 01 May, the latest date for which data are available, the number had increased to 6,391 deaths of residents in care homes involving COVID-19.

Figure 4: The cumulative number of deaths in care homes involving COVID-19 in England using different data sources, up to 24 April 2020

Figure 4: The cumulative number of deaths in care homes involving COVID-19 in England using different data sources, up to 24 April 2020

#### Source: Care Quality Commission and Office for National Statistics

#### Notes:

- 1. Figures exclude non-residents.
- 2. Figures are provisional.
- 3. Figures for the Care Quality Commission (CQC) are based on the date the CQC was notified of the death. Figures only include deaths that were notified by 1 May 2020, and they may be an underestimate because of reporting delays.

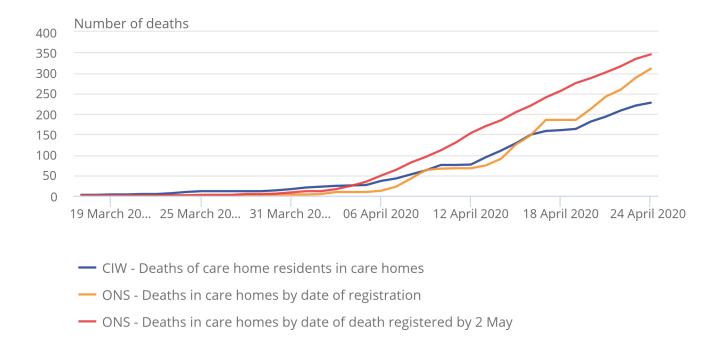

Up to 24 April, there were 4,347 deaths in care homes involving COVID-19 notified to the CQC (Figure 4). There were an additional 654 deaths of care home residents where the location of death was not stated by the care home provider, shown separately on Figure 4. These deaths may have taken place in a care home, but they could have been in hospital or elsewhere. The ONS has reported that there were 4,669 deaths in care homes registered during the same period and 4,756 deaths in care homes occurring in the same period that were registered by 2 May.

The data from the CQC and ONS registrations follow a similar pattern. The difference is likely to be caused by registration delays in ONS figures or reporting delays in CQC figures. It takes around two to three days for the CQC to be notified of a death, while the ONS has to wait until a death is registered to be included in our statistics, which can take longer. On average, for deaths occurring in March 2020, there was a delay of four days between a death occurring and being registered. ONS death occurrences are higher than CQC figures as these numbers are based on the date of the death rather than date of notification.

An important difference between the two sources is that the ONS reports deaths where COVID-19 was mentioned on the death certificate, while CQC notifications rely on the statement of the care home provider that COVID-19 was suspected or confirmed. CQC does not hold person-level information that allows a direct comparison between the two sources and so an accurate effect of different reporting criteria cannot be determined.

Figure 5: The cumulative number of deaths in care homes involving COVID-19 in Wales using different data sources, up to 24 April 2020

Figure 5: The cumulative number of deaths in care homes involving COVID-19 in Wales using different data sources, up to 24 April 2020

Source: Care Inspectorate Wales and Office for National Statistics

In Wales, the Welsh Government publishes the number of deaths of care home residents involving COVID-19 notified to Care Inspectorate Wales (CIW). Figure 5 shows the number of deaths notified to CIW from 17 March 2020 (the first notification) that occurred in care homes and where suspected or confirmed COVID-19 was listed as the cause of death by the service provider.

Including deaths notified up to 1 May 2020, there were 295 deaths where the death occurred in care homes. Between 17 March and 24 April 2020, there were 227 deaths where the death occurred in care homes notified to the CIW. This is 83 fewer than the 310 deaths registered as involving COVID-19 and occurred in care homes as reported by the ONS, and 118 fewer than the 345 deaths that occurred between 17 March and 24 April 2020 but were registered by 2 May.

It is acknowledged that care homes will be feeling the effects of the deaths of any of their residents including those that died outside of care homes, for example, in hospitals. The ONS, CQC, PHE and CIW are undertaking further work to better understand the total impact on care home residents.

#### Conclusion

The ONS and DHSC COVID-19 death numbers have different criteria. The DHSC count deaths where a person has been tested positive for COVID-19, while the ONS counts deaths where COVID-19 (including suspected cases) was mentioned on the death certificate, regardless of location. The improvement to the recording of COVID-19 deaths in England by PHE has gone some way in reconciling the differences.

The ONS registration numbers in Figure 1 align more closely to the DHSC-reported number of deaths, as like the DHSC-reported number it is based on the date a death is known (reported) rather than when it occurred. The date of death data from NHS England are closer to the ONS occurrence data as they are both based on the date the person died. The figures published on GOV.UK are valuable because they are available very quickly and give an indication of what is happening day by day. Their definition is also clear, so the limitations of the data can be understood. But they do not include all deaths involving COVID-19, such as those where no test result was available.

NHS England's reconciled numbers by date of death are valuable as they give a good indication of the lags in the daily deaths in hospital reporting process. They allow analysis by date of death to be carried out, which is a better indicator of the growth in the number of deaths.

Numbers produced by the ONS take longer to prepare because they have to be certified by a doctor, registered and processed. But once ready, they are the most accurate and complete information. The ONS provides figures based on deaths registered in England and Wales with COVID-19 (more information can be found in the Measuring the data section of our Weekly deaths publication).

The ONS is now publishing on behalf of the CQC the number of deaths in care homes that are notified to the CQC. This gives a more up-to-date number of deaths of care residence in care homes than was previously available. In CQC figures, a death involving COVID-19 is based on the statement from the care home provider to the CQC: the assessment of whether COVID-19 was involved may or may not correspond to a medical diagnosis or test result, or be reflected in the death certification.

The ONS is also including figures produced by CIW, which give a more up-to-date figure of numbers of deaths in care homes where COVID-19 was suspected or confirmed as recorded by a clinician.

## 4. Deaths data

Deaths registered weekly in England and Wales, provisional

Dataset | Released 5 May 2020

Provisional counts of the number of deaths registered in England and Wales, by age, sex and region, in the latest weeks for which data are available. Includes the most up-to-date figures available for deaths involving the coronavirus (COVID-19).

## 5. Glossary

### Coronavirus (COVID-19) deaths

Coronavirus (COVID-19) deaths are those deaths registered in England and Wales in the stated week where COVID-19 was mentioned on the death certificate as "deaths involving COVID-19". A doctor can certify the involvement of COVID-19 based on symptoms and clinical findings – a positive test result is not required.

## 6. Measuring the data

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in the <u>Mortality statistics in England and Wales QMI</u>.

To meet user needs, we publish very timely but provisional counts of death registrations in England and Wales in our <u>Deaths registered weekly in England and Wales</u>, <u>provisional dataset</u>. These are presented by sex, age group and regions (within England) as well as for Wales as a whole. To allow time for registration and processing, these figures are published 11 days after the week ends. Because of the rapidly changing situation, in this bulletin we have also given provisional updated totals based on the latest available death registrations, up to 2 May 2020.

Because of the coronavirus (COVID-19) pandemic, our regular weekly deaths release now provides a separate breakdown of the numbers of deaths involving COVID-19: that is, where COVID-19 or suspected COVID-19 was mentioned anywhere on the death certificate, including in combination with other health conditions. If a death certificate mentions COVID-19, it will not always be the main cause of death but may be a contributory factor. This new bulletin summarises the latest weekly information and will be updated each week during the pandemic.

These figures are different from the daily surveillance figures on COVID-19 deaths published by the Department of Health and Social Care (DHSC) on GOV.UK, for the UK as a whole and constituent countries. Figures in this report are derived from the formal process of death registration and may include cases where the doctor completing the death certificate diagnosed possible cases of COVID-19, for example, where this was based on relevant symptoms but no test for the virus was conducted. Our figures also include any deaths that occur outside hospital.

In contrast to the GOV.UK figures, we include only deaths registered in England and Wales, which is the legal remit of the Office for National Statistics (ONS). Table 1 and 2 provide an overview of the differences in definitions between sources.

Table 1: Definitions of COVID-19 deaths between different sources

	DHSC COVID-19 (as published on GOV.UK) before 29 April	DHSC COVID-19 (as published on GOV.UK) from 29 April	ONS COVID- 19 deaths registered	ONS COVID-19 death occurrence (actual date of death)	NHS England	Public Health Wales

We will publish accompanying articles periodically, giving enhanced information such as age-standardised and age-specific mortality rates for recent time periods and breakdowns of deaths involving COVID-19 by associated pre-existing health conditions.

There is usually a delay of at least five days between occurrence and registration. More information on this issue can be found in our <u>impact of registration delays release</u>.

Our <u>User guide to mortality statistics</u> provides further information on data quality, legislation and procedures relating to mortality and includes a <u>glossary of terms</u>.

# 7. Strengths and limitations

Figures are based on the date the death was registered, not when it occurred. There is usually a delay of at least five days between occurrence and registration. More information on this issue can be found in our <a href="impact of registration delays release">impact of registration delays release</a>.
