

Statistical bulletin

Construction output in Great Britain: April 2018 and new orders January to March 2018

Short-term measures of output by the construction industry in Great Britain and contracts awarded for new construction work in the UK.

1 . Main points

- Construction output continued its recent decline in the three-month on three-month series, falling by 3.4% in April 2018; the biggest fall seen in this series since August 2012.
- The three-month on three-month decrease in construction output was driven by falls in both repair and maintenance and new work, which fell 3.0% and 3.7% respectively.
- Following three consecutive months of contraction in the month-on-month series at the start of 2018, construction output experienced a slight bounceback in April 2018, increasing by 0.5%.
- Improvements to the quality and accuracy of regional and sub-sector construction estimates have been made as a result of a methodological improvement, which results in revisions to Tables 5 and 6 of this publication back to 2010. However, in line with the standard [National Accounts Revisions Policy](#), no top-level revisions will be made in this publication.
- Total construction new orders also decreased in Quarter 1 (Jan to Mar) 2018, falling by 4.6%, driven by the continued fall in all other work new orders.

2 . Things you need to know about this release

The monthly business survey, Construction output, collects output by sector from businesses in the construction industry within Great Britain. Output is defined as the amount chargeable to customers for building and civil engineering work done in the relevant period excluding Value Added Tax (VAT) and payments to sub-contractors.

The survey's results are used to produce seasonally adjusted monthly, quarterly and annual estimates of output in the construction industry at current price and at chained volume measures (removing the effect of inflation). The estimates are widely used by private and public sector institutions, particularly by the Bank of England and Her Majesty's Treasury, to assist in informed decision-making and policy-making. Construction output is an important economic indicator and is also therefore used in the compilation of the output measure of gross domestic product (GDP).

Summary information can be found in the [Construction output Quality and Methodology Information report](#).

New orders in construction measures the value of new orders of main contractors by type of work and region within Great Britain. Since April 2013, data have been supplied directly from Barbour ABI with a sample size of all local authorities in England, Scotland and Wales, plus 10,000 contractors per year. It should be noted that there may be some discontinuity in the data around Quarter 3 (July to Sept) 2013 where the Barbour ABI data were used for the first time to compile these statistics.

Summary information can be found in the [New orders in construction Quality and Methodology Information report](#).

Our next release, [Construction output in Great Britain: May 2018](#) will include methodological updates and revisions back to 1997 and is our Blue Book-consistent publication. This is in line with the standard [National Accounts Revisions Policy](#). These annual changes will include updating the reference year from 2015 equals 100 to 2016 equals 100, along with adding an additional year of chain-linking weights for 2016 and updated VAT data.

In addition to these Blue Book changes, the [Construction output in Great Britain: May 2018](#) publication will also be the first construction output release in which an improved methodology is used to address the bias in early estimates of construction output.

While no top-level revisions have been made to construction output in the release, some lower-level revisions can be seen in Tables 5 and 6 of this publication from 2010 onwards. These revisions are as a result of a methodological improvement, which increases the quality of Office for National Statistics (ONS) regional and sub-sector construction estimates, as outlined in [Construction development: improvements to regional and sub-sector level estimates](#), published on 4 June 2018.

In July 2018, short-term economic indicators will become part of [monthly GDP](#). In addition to this release on 10 July 2018, the following will be published:

- UK Index of Production: May 2018
- UK Index of Services: May 2018
- Construction output in Great Britain: May 2018
- UK Trade: May 2018

3 . Construction output in April 2018

Construction output fell by 3.4% during the three-month on three-month period to April 2018, representing the sixth consecutive three-month on three-month decline in output in this series. The three-month time series provides a more comprehensive picture of the underlying trends within the industry, compared with the more volatile monthly series, which is also shown in Figure 1.

Figure 1: Rolling three-month and monthly all work, April 2018

Chained volume measure, seasonally adjusted, Great Britain

Figure 1: Rolling three-month and monthly all work, April 2018

Chained volume measure, seasonally adjusted, Great Britain

Source: Construction Output and Employment - Office for National Statistics

Notes:

1. Due to a formatting error, the date labels in the chart download have been updated on 29 June 2018, the data is unaffected.

Following consecutive periods of month-on-month growth in the final two months of 2017, construction output reached a record high. Construction output peaked in December 2017, reaching a level that was 30.3% higher than the lowest point of the last five years, April 2013. Despite three consecutive periods of month-on-month decline at the beginning of 2018, construction output did bounce back slightly in April 2018 and as a result construction remains 23.4% above its lowest point in April 2013.

4 . Contributions to growth

Construction output can be broken down by different types of work; these are categorised into all new work, and repair and maintenance, as shown in Figure 2.

Figure 2: Components of all work, April 2018

Chained volume measure, seasonally adjusted, Great Britain

Figure 2: Components of all work, April 2018

Chained volume measure, seasonally adjusted, Great Britain

Source: Construction Output and Employment - Office for National Statistics

Notes:

1. Due to a formatting error, the date labels in the chart download have been updated on 29 June 2018, the data is unaffected.

Figure 2 shows that since the beginning of 2015, new work, and repair and maintenance have followed a broadly similar pattern. Both repair and maintenance, and new work have risen steadily, resulting in all work reaching a level peak in December 2017.

Following three consecutive months of contraction in the month-on-month series at the start of 2018, construction output experienced a slight bounceback in April 2018, increasing by 0.5%. This rise in construction output stemmed from increases in both all new work, and total repair and maintenance, which grew 0.7% and 0.3% respectively in April 2018. It is worth noting that all new work accounts for approximately two-thirds of all work, while repair and maintenance accounts for approximately one-third.

Figure 3: Difference in three-month on three-month seasonally adjusted volume from the main construction sectors

February to April 2018 compared with November 2017 to January 2018, Great Britain

Figure 3: Difference in three-month on three-month seasonally adjusted volume from the main construction sectors

February to April 2018 compared with November 2017 to January 2018, Great Britain

Source: Construction Output and Employment - Office for National Statistics

Notes:

1. Please note that sector estimates may not sum due to rounding.

Figure 3 shows the difference in the three-month on three-month volume from the different construction sectors in terms of real volume growth, taken from our seasonally adjusted chained volume measure series.

Construction output fell by £1.35 billion in the three-month on three-month time series in April 2018, stemming from falls in all but one sector. The most notable decline came from infrastructure new work, which fell sharply in the three months to April 2018, decreasing by £379 million. Elsewhere, other notable falls in output came from total housing repair and maintenance, and private housing new work, which fell by £230 million and £189 million respectively. As highlighted in the [Construction output in Great Britain: March 2018](#) bulletin, we received some anecdotal information from a small number of survey respondents regarding the effect of adverse weather on their businesses in February and March 2018. This weather potentially contributed to the decline in construction output in the three-month on three-month series to April 2018, although it is difficult to quantify the exact impact on the industry.

In contrast, as was the case in the previous publication, the relatively small and volatile private industrial sector provided the only positive contribution to growth in the three months to April 2018, increasing by £29 million.

Figure 4: Difference in month-on-month seasonally adjusted volume from the main construction sectors

April 2018 compared with March 2018, Great Britain

Figure 4: Difference in month-on-month seasonally adjusted volume from the main construction sectors

April 2018 compared with March 2018, Great Britain

Source: Construction Output and Employment - Office for National Statistics

Notes:

1. Please note that sector estimates may not sum due to rounding.

Figure 4 shows the difference in month-on-month volume from the different sectors in terms of real volume growth, taken from our seasonally adjusted chained volume measure series.

Compared with the previous month, construction output increased by £68 million in April 2018. The main contributions to the rise in all work came from an increase in the value of infrastructure and private commercial new work, both of which recovered somewhat from weak starts to 2018, increasing by £40 million and £37 million respectively. Elsewhere, non-housing repair and maintenance also provided a notable contribution to growth, increasing by £34 million in April 2018.

However, some of the growth in April 2018 was offset by the sustained fall in public other new work, which decreased by £28 million compared with the previous month. The only other notable decrease came from total housing repair and maintenance, which decreased by £22 million.

5 . Detailed growth rates

Table 1 provides a detailed description of the growth rates of each work type, alongside the seasonally adjusted chained volume measure level of output.

Table 1: Construction output main figures, April 2018

Great Britain

	Seasonally adjusted, volume £ million and percentage change				
	Volume £ million	Most recent month on the previous month	Most recent month on year	Most recent three- months on three- months earlier	Most recent three-months on year
Total all work	12,582	0.5	-3.3	-3.4	-3.3
Total all new work	8,139	0.7	-3.0	-3.7	-3.1
Total repair and maintenance	4,443	0.3	-3.9	-3.0	-3.7
New housing					
Public	423	-0.5	-5.7	-6.3	-6.2
Private	2,777	0.6	8.5	-2.2	6.8
Other new work					
Infrastructure	1,452	2.8	-8.9	-8.0	-7.2
Excl infrastructure					
Public	755	-3.6	-15.3	-7.2	-14.0
Private industrial	368	-1.8	6.1	2.8	6.5
Private commercial	2,363	1.6	-7.3	-1.9	-7.6
Repair and maintenance					
Public housing	556	0.1	-10.5	-5.8	-9.0
Private housing	1,777	-1.3	-2.7	-2.3	-0.8
Non- housing R&M	2,110	1.7	-3.0	-2.8	-4.7

Source: Construction Output and Employment – Office for National Statistics

Total all work increased to £12,582 million in April 2018. This increase stems from a rise in both all new work, and total repair and maintenance, which grew to £8,139 million and £4,443 million respectively.

In comparison with April 2017, construction output fell 3.3%, representing the fourth consecutive month-on-year contraction and the most sustained fall in this series since May 2013. This month-on-year fall in construction output has been driven by falls in both new work, and repair and maintenance. The fall in new work occurred as a result of the continued fall in both private commercial work, which decreased 7.3%, and public other new work, which contracted 15.3% compared with April 2017. Meanwhile, the only notable positive contribution to month-on-year growth came from the consistently strong private housing sector, which grew 8.5% in April 2018.

Construction output also fell in the most recent three-months on year series in April 2018, contracting by 3.3%. The increase in private housing, which grew 6.8%, was more than offset by falls in public other new work, which contracted 14.0% and private commercial work, which decreased 7.6%.

6 . New orders

Figure 5 shows the split in new orders between housing new orders and all other work new orders.

Figure 5: Components of all new work, new orders, Quarter 1 (Jan to Mar) 2018

Constant prices, seasonally adjusted, Great Britain

Figure 5: Components of all new work, new orders, Quarter 1 (Jan to Mar) 2018

Constant prices, seasonally adjusted, Great Britain

Source: Office for National Statistics and Barbour ABI

As seen in Figure 5, the value of total new orders has remained broadly stable since 2013, with the exception of Quarter 3 (July to Sept) 2017. This trend is also reflected in the value of all other work new orders. Over the same period, housing new orders have increased gradually, continuing this trend in Quarter 1 (Jan to Mar) 2018.

All other work new orders fell by 13.4% in Quarter 1 2018, driven by large falls in infrastructure and private commercial new orders. Excluding the fall in all other work in Quarter 4 (Oct to Dec) 2017, which occurred as a result of the drop-off in new orders following the high-value contracts awarded relating to High Speed 2 (HS2), the Quarter 1 2018 fall is the largest contraction in all other work new orders since Quarter 2 (Apr to June) 2012.

In contrast, all new housing orders increased by 15.2% in Quarter 1 2018, recovering from a slight drop-off at the end of 2017, reaching a post-downturn peak. The quarterly growth in all new housing was driven by private housing new orders, which more than offset a fall in public housing.

Overall, despite experiencing a fall in Quarter 1 2018, all new work remains at a relatively high level.

Table 2 provides a detailed description of the growth rates of each work type, alongside the seasonally adjusted volume level of new orders.

Table 2: Construction new orders main figures, Quarter 1 (Jan to Mar) 2018

Great Britain

Seasonally adjusted, volume £ million and percentage change

Type of work	Most recent level (£m)	Most recent quarter on previous quarter	Most recent quarter on a year earlier	Most recent 4 quarters on a year earlier
All new work	11,628	-4.6%	-6.6%	1.8%
All new housing	4,320	15.2%	18.5%	2.3%
Public	267	-20.1%	10.0%	1.5%
Private	4,053	18.6%	19.1%	2.4%
All other work	7,308	-13.4%	-16.9%	1.6%
Infrastructure	1,843	-43.6%	-33.6%	26.4%
Public	1,672	16.7%	31.4%	-6.9%
Private industrial	1,117	62.2%	10.8%	5.2%
Private commercial	2,676	-12.2%	-28.5%	-14.9%

Source: Office for National Statistics and Barbour ABI

New orders decreased by 4.6% in Quarter 1 2018 compared with Quarter 4 2017, falling to £11,628 million. This occurred as a result of a 13.4% fall in all other work, with the most notable downward pressure coming from the infrastructure and private commercial sectors, which fell 43.6% and 12.2% respectively. The fall in other new work more than offset the growth of 18.6% in private housing new orders in Quarter 1 2018.

Compared with Quarter 1 2017, total new orders fell by 6.6% in Quarter 1 2018. Similar to the quarter-on-quarter growth, this contraction came as a result of a fall in all other work. Both infrastructure and private commercial new orders experienced particularly large falls, decreasing by 33.6% and 28.5% respectively. In contrast, all new housing experienced 18.5% growth compared with Quarter 1 2017, with growth in both private and public housing.

Despite the decrease in new orders in both the quarter-on-quarter and quarter-on-year series, the most recent four quarters on a year earlier series experienced a 1.8% increase, with growth in both new housing and new all other work. The large increase in infrastructure, which was driven predominantly by the spike relating to HS2 in Quarter 3 2017, was offset slightly by decreases in public other work, new orders and private commercial new orders.

7 . Links to related statistics

Output in the construction industry follows the Eurostat Short Term Statistics (STS) regulation for production in construction. Before any comparisons are made with the Euro area or EU28, it is worth noting that the UK is the only member state to follow the A method for compiling production in construction statistics.

The latest release of Production in construction, published by Eurostat on 11 May 2018 for March 2018, showed the seasonally adjusted [production in the construction sector \(PDF, 517.1KB\)](#) decreased by 0.3% in the Euro area (EA19) and decreased by 0.9% in the EU28 when compared with February 2017.

Outside the EU, the US Census Bureau release [Value of construction put in place \(PDF, 200KB\)](#) was published on 1 June 2018. This includes the total dollar value of construction work done in the US.

[The Construction statistics: Number 18, 2017 edition](#) was published on 2 October 2017. This publication contains analysis on the construction sector in 2016, as well as information on [sources and outputs in the industry](#). The next edition of the construction statistics annual publication, titled [Construction statistics: Number 19, 2018 edition](#), is due to be released on 22 August 2018.

8 . Other useful links

- [Ministry of Housing, Communities and Local Government](#) (Housing starts and completions)
- [Construction statistics in Northern Ireland](#)

9 . Quality and methodology

Our Monthly Construction Output Survey measures output from the construction industry in Great Britain. It samples 8,000 businesses, with all businesses employing over 100 people or with an annual turnover of more than £60 million receiving a questionnaire by post every month.

The [Construction Quality and Methodology Information](#) report contains important information on:

- the strengths and limitations of the data and how it compares with related data
- uses and users of the data
- how the output was created
- the quality of the output including the accuracy of the data

The New orders in construction [Quality and Methodology Information](#) report provides similar information for the new orders data.

Value Added Tax (VAT) turnover has been used to estimate the output of small- and medium-sized businesses. In this release, VAT turnover has been used for selected industries previously covered by the Monthly Business Survey from Quarter 1 (Jan to Mar) 2016 to Quarter 3 (July to Sept) 2017.

Further information on the use of VAT turnover and its impact can be found in the following articles:

- [VAT turnover implementation into national accounts article](#)
- [VAT turnover data in national accounts: background and methodology](#)

10 . Construction statistics development

On 11 December 2014, the UK Statistics Authority announced its decision to suspend the designation of Construction output and New orders as [National Statistics](#) due to concerns about the quality of the [Construction Price and Cost Indices](#) used to remove the effects of inflation from the statistics.

We took responsibility for the publication of the Construction Price and Cost Indices from the then [Department for Business, Innovation and Skills \(BIS\)](#) on 1 April 2015, introducing an interim solution for measuring output prices in June 2015 for all periods from January 2014 onwards.

In September 2017, we released the [impact of improvements to construction statistics article](#), which explains and highlights the impact of improvements made to construction statistics, affecting the nominal data series, output price indices and seasonal adjustment. As a result of these improvements, the output price indices are no longer considered to be an interim method.

In addition, we released two further methodological articles on 4 June 2018 detailing the improvements we are making to construction statistics as part of wider improvements to national accounts. These articles detail two major improvements to the construction output methodology:

- [Improvements to addressing the bias in early estimates of construction output](#), which will be incorporated for the first time in the Quarterly national accounts: January to March 2018 on 29 June 2018
- [Improvements to regional and sub-sector level estimates](#) using new orders data supplied by Barbour ABI, which have been incorporated for the first time in this publication

The Office for Statistics Regulation is currently in the process of re-assessing the National Statistic status for construction statistics: Output, New orders and Price indices.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

1A.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED INDEX NUMBERS BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the pe-
riod on period growths for the same component differ between tables. This
is due to the growth rates being calculated at a higher precision than 1 dp
within the production system. This accuracy is truncated when transferred
into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

5 CONSTRUCTION OUTPUT: VALUE NON-SEASONALLY ADJUSTED CURRENT PRICES BY TYPE OF WORK

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
