3. [Output in the construction industry, February 2016](#)
4. [Contributions to growth](#)
5. [The quality of the estimate of output in the construction industry](#)
6. [Construction estimates in gross domestic product](#)
7. [Economic context](#)
8. [International perspective](#)
9. [Background notes](#)

# 1. Main points

In February 2016, output in the construction industry was estimated to have decreased by 0.3% compared with January 2016. Both all new work and repair and maintenance reported decreases, falling by 0.2% and 0.5% respectively.

Within new work, there were decreases in all work types, except private new housing.

Within repair and maintenance (R&M) there were falls in all work types except public housing R&M.

Compared with February 2015, output in the construction industry increased by 0.3%. All new work was flat while there was an increase of 0.8% in repair and maintenance.

Comparing the 3 months, December 2015 to February 2016, with the previous 3 months, September 2015 to November 2015, construction output increased by 1.5%. All new work increased by 2.5% while there was a fall of 0.3% in repair and maintenance.

When comparing the 3 months, December 2015 to February 2016, with the same 3 months a year ago, construction output was estimated to have increased by 0.3%. All new work increased by 0.8% and repair and maintenance fell by 0.7%.

The only period open for revision is January 2016 which has been revised downwards by 0.2 percentage points from a fall of 0.2% to a fall of 0.4%. This was caused by the incorporation of late data. More information on revisions can be found in the background notes.

## 2. About this release

Output is defined as the amount charged by construction companies to customers for the value of work (produced during the reporting period) excluding VAT and payments to sub-contractors.

Construction output estimates are a short-term indicator of construction output by the private sector and public corporations within Great Britain and are produced from a monthly survey of 8,000 businesses in Great Britain. The estimates are produced and published at current prices (including inflationary price effects) and at chained volume estimates (with inflationary effects removed) both seasonally adjusted and non-seasonally adjusted.

Chained volume measures are also described as volume. Construction output is used in the compilation of the output approach to measuring [gross domestic product \(GDP\)](#).

Detailed estimates along with a longer run of time series data are available to download in the Output in the Construction Industry, February 2016 datasets. In these tables, you will find chained volume estimates back to Quarter 1 (Jan to Mar) 1997, and monthly estimates back to January 2010. Current price non-seasonally adjusted data are available back to Quarter 1 (Jan to Mar) 1955. More information on these statistics can be found in the "[Definitions and explanations](#)" article.

The data published in this release cover construction estimates for Great Britain. Construction output estimates for Northern Ireland can be obtained from the [Central Survey Unit](#).

## National Statistics status

On 11 December 2014 the UK Statistics Authority announced its decision to suspend the designation of [Construction Price and Cost Indices](#) due to concerns about the quality of these deflators. As a result the UK Statistics Authority announced its decision to suspend the designation of Output and New Orders as National Statistics in respect of the Code of Practice for Official Statistics.

We took responsibility for the publication of the Construction Price and Cost indices from the Department of Business Innovation and Skills (BIS) on 1 April 2015. Since this point we have worked towards creating an interim solution to measure output prices and replace the statistical models that had been used in the production of chained volume measures (CVMs) for output in the construction industry since Quarter 3 (July to Sept) 2014 and to provide an ongoing source of data from Quarter 1 (Jan to Mar) 2014 onwards. This [interim solution](#) was included in the data published in June 2015 for all periods from January 2014 onwards.

## 3. Output in the construction industry, February 2016

### All work

In February 2016 all work:

- decreased by 0.3% compared with January 2016
- increased by 0.3% compared with February 2015
- in the 3 months (December 2015, January 2016, February 2016) compared with the previous 3 months (September 2015, October 2015, November 2015) construction output increased by 1.5%

**Figure 1: All work – monthly time series chained volume measure, seasonally adjusted (SA) Index (2012 = 100)**

Great Britain, February 2016

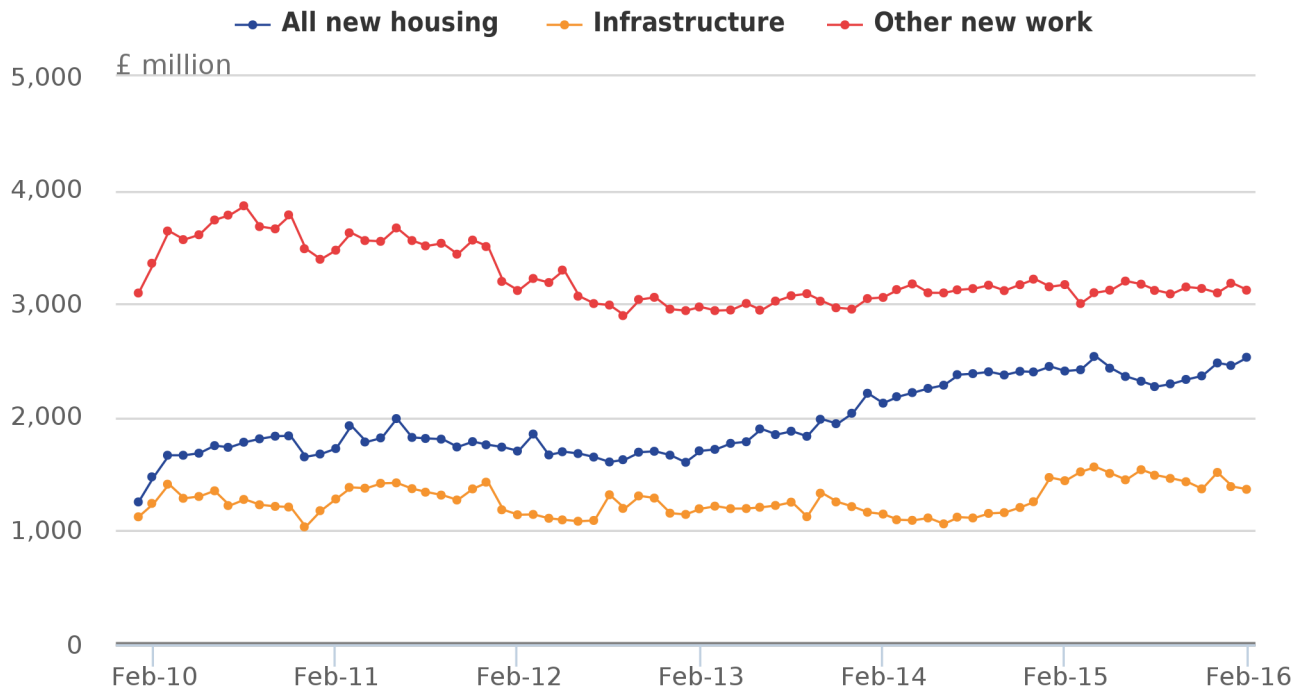

Source: Construction: Output and Employment - Office for National Statistics

Figure 1 shows the 2 main components of all work. The chart shows that the monthly series is fairly volatile. The early period shows that after a rise in output in early 2010, the level remained fairly consistent until late 2011 when output started to fall. Output increased steadily in 2013 and 2014 with all new work, and repair and maintenance performing at a similar level, however, in late 2014 the 2 components started to move in opposite directions. In February 2016, all work decreased by 0.3% with both all new work and repair and maintenance contributing to the fall, decreasing by 0.2% and 0.5% respectively.

**Figure 2: Components of all new work, monthly time series, seasonally adjusted chained volume measure, £ million**

Great Britain, February 2016

Source: Construction: Output and Employment - Office for National Statistics

Figure 2 looks at the main components of all new work. There was sustained growth in new housing from early 2013 to late 2014, however, after a contraction in mid 2015 there has been underlying growth in recent months. After growth in infrastructure from late 2014 into early 2015, there has been a mixed picture since with December 2015 reporting the only period of month-on-month growth in the last 7 periods. Other new work remained fairly flat from 2012 and after growth in January 2016 there was a fall into February 2016.

**Figure 3: Components of repair and maintenance, monthly time series, seasonally adjusted (SA) chained volume measure, £ million**

Great Britain, February 2016

Source: Construction: Output and Employment - Office for National Statistics

Figure 3 looks at the 2 main components of repair and maintenance. The level of housing and non-housing repair and maintenance is similar and has remained fairly constant since the start of the time series. In February 2016 compared with January 2016 there was a decrease of 0.5% in all repair and maintenance with housing repair and maintenance the main contributor falling by 1.2% which was offset slightly by non-housing repair and maintenance which increased by 0.2%.

## Summary of growth rates for all work types

Table 1 provides a summary of growth rates across the different types of construction work in February 2016. Some main points from this table are as follows:

- there were month-on-month falls in both all new work and repair and maintenance; the main contribution to the fall was repair and maintenance
- within all new work there were month-on-month falls in all work types except private new housing; the level of private new housing is the highest on record
- the year-on-year increase in all work was due to repair and maintenance while there was no growth in all new work

**Table 1: Construction output summary tables, chained volume measures, seasonally adjusted**

Great Britain, February 2016

	Percentage change (%)				Most recent level (£m)
	Most recent 3 months on a year earlier	Most recent 3 months on 3 months earlier	Most recent month on the same month a year ago	Most recent month on the previous month	
Total all work	0.3	1.5	0.3	-0.3	10,913
Total all new work	0.8	2.5	0.0	-0.2	7,010
Total repair and maintenance	-0.7	-0.3	0.8	-0.5	3,903
<b>All new work</b>					
Total all new work	0.8	2.5	0.0	-0.2	7,010
<b>New housing</b>					
Public corporations	-17.0	7.5	-18.6	-2.1	373
Private sector	7.7	6.7	10.6	3.9	2,155
<b>Other new work</b>					
Infrastructure	2.5	0.1	-5.3	-1.7	1,364
<b>Excl infrastructure</b>					
Public corporations	0.0	2.4	-1.0	-1.8	786
<b>Private sector</b>					
Private sector - industrial	-6.5	-11.0	-13.8	-9.7	305
Private sector - commercial	-1.2	1.6	0.4	-0.6	2,027
<b>Repair and maintenance</b>					
Total repair and maintenance	-0.7	-0.3	0.8	-0.5	3,903
<b>Housing</b>					
Public corporations	-2.2	-0.1	-0.3	4.4	617
Private sector	3.2	-2.5	4.5	-3.6	1,365
Non-housing	-2.8	1.2	-1.3	0.2	1,921

Table source: Office for National Statistics

## 4. Contributions to growth

Figure 4: Contributions to month-on-month volume growth from the main construction sectors

Great Britain, February 2016 compared with January 2016

Source: Output and Employment - Office for National Statistics

Figure 4 shows the contribution of each sector to output growth in the construction industry between February 2016 and January 2016. In February 2016, all work types except total housing and non-housing repair and maintenance contributed to the decrease in construction output. The largest downwards contribution came from private industrial work.

## 5. The quality of the estimate of output in the construction industry

Output in the construction industry estimates are produced from the Monthly Business Survey on the second Friday of the month, 2 months after the reporting month. Revised results, for previously published periods, are published in line with the national accounts revisions policy. More information about the data content for this release can be found in the background notes.

Revisions are an inevitable consequence of the trade-off between timeliness and accuracy. The response rate in February 2016 was 73.6% of questionnaires, accounting for 83.6% of registered turnover in the construction industry. Therefore the estimate is subject to revisions as more data become available.

The monthly output in the construction industry time series now spans 74 months, however, users should note that 60 months is the minimum time span recommended by Eurostat for seasonal adjustment. While the seasonal pattern is generally established after 60 months in a monthly time series, there is still potential for increased revisions until the seasonal pattern has matured.

All estimates, by definition, are subject to statistical uncertainty and for many well-established statistics we measure and publish the sampling error associated with the estimate, using this as an indicator of accuracy. For construction output we publish sample and non-sample errors in Table 11 of the main reference tables. It should

be noted that we are continually working on methodological changes to improve the accuracy of the construction output estimates. Progress on these can be found on the [ONS continuous improvement](#) page on our website.

## 6. Construction estimates in gross domestic product

Construction estimates are a main component of the output approach to measuring GDP along with the estimates of services, production and agriculture. As an aid to users, the short-term economic indicator releases that directly feed into GDP include an additional table of the GDP components. It is anticipated that this table will inform users of the relationship between the individual components which comprise GDP output. The publication dates and the quarterly growths of the individual GDP components are shown below.

Each component of GDP has a weight within GDP based on its value in 2012. Construction has a weight of 59, which means that it is 59 parts of the 1,000 that make up total GDP. To determine the effect each component has on GDP multiply the component growth by its weight in GDP. An example using Quarter 2 (Apr to June) 2015 data: Construction growth = 1.4 Weight in GDP = 0.059 (59/1000) Effect on GDP = 1.4 \* 0.059 = 0.08 or 0.1 to 1 decimal place (dp). Revisions to components and the effect on GDP can be calculated using the same process. As a general rule there are no revisions to GDP when the component revisions are:

Index of Production (IoP) = between 0.3 and -0.3 Construction = between 0.9 and -0.9 Index of Services (IoS) = 0.0 (all values above or below 0.0 effect GDP due to the high weight of IoS in GDP).

Because;

$IoP = 0.148 * 0.4 = 0.0592$  or 0.1 to 1 dp  $Construction = 0.059 * 0.9 = 0.0531$  or 0.1 to 1 dp  $IoS = 0.786 * 0.1 = 0.0786$  or 0.1 to 1 dp

Table 2 shows the latest monthly and revised quarterly output figures that fed into the Quarterly National Accounts release for Quarter 4 (Oct to Dec) 2015 published on 31 March 2016.

**Table 2: GDP component tables, chained volume measures, seasonally adjusted**

Great Britain, February 2016

Publication	Weight in GDP (%)	Publication date	Latest periods	Percentage change (%)	
				Most recent period on a year earlier	Most recent period on the previous period
GDP	100.0	31 Mar	Q4 2015	2.1	0.6
			Q3 2015	2.2	0.4
Index of Production	14.9	8 Apr	Q4 2015	0.8	-0.4
			Q3 2015	1.2	0.2
Construction output	5.9	15 Apr	Q4 2015	1.0	0.3
			Q3 2015	1.3	-1.6
Index of Services	78.6	31 Mar	Q4 2015	2.5	0.8
			Q3 2015	2.6	0.7

Agriculture	0.7	31 Mar	Q4 2015	-2.1	0.3
			Q3 2015	0.0	0.2

Source: Office for National Statistics

The Quarterly National Accounts published on 31 March 2016 contained an estimate for quarterly construction of an increase of 0.3%. This estimate has not been revised within this release.

## 7. Economic context

Construction output fell by 0.3% between January and February 2016, following output growth of -0.4% and 2.1% in January 2016 and December 2015 respectively. While construction output increased by 0.3% in February 2016 compared with the same month a year ago, growth during the 2015 calendar year was considerably stronger, as output expanded by 3.4% over this period. Growth for 2015 as a whole was more positive than it has been in recent months, and was above the pre-downturn annual average, albeit lower than the historically strong growth of 8.6% observed in 2010.

The main contributions to the decline in construction output in February 2016 came from a contraction in repair and maintenance of private housing which had a contribution of -0.4% on the month. Other downwards contributions came mainly from private industrial other new work and infrastructure of 0.3% and 0.2% respectively. This was partly offset by growth in construction output from private housing new work of 0.8%, and repair and maintenance of public housing of 0.2%. Private sector housing provided the largest contribution to construction output growth on the year.

The recent weakness in construction output has come alongside a continued price pressure in the housing market. The [ONS House Price Index](#) indicated UK house prices increased by 7.6% in the year to February 2016, down from 7.9% in the year to January 2016. [Halifax](#) reported that prices in the 3 months to February 2016 were 9.7% higher than in the same 3 months a year earlier, but unchanged from January 2016. [Nationwide](#) reported that UK house prices increased by 4.8% in the year to February 2016, up from 4.4% in the year to January 2016. The continued strength of house price inflation has coincided with a 5.5% increase in the seasonally adjusted estimate of the number of residential property transactions between January 2016 and February 2016. This was 16.1% higher compared with the same month last year according to [HM Revenue and Customs data](#).

The increase in growth in construction output associated with new private housing activity is consistent with a rise in mortgage approvals for house purchases. According to the [Bank of England's Inflation Report](#) there has been an increase in mortgage approvals for home purchases to around 74,000 a month on average in Quarter 1 (Jan to Mar) 2016, and much of this growth is coming from the buy-to-let sector. This could be partly due to the pre-announcement of the change in stamp duty which may have encouraged individuals to bring forward housing transactions. The [RICS construction market survey](#) is also consistent with the increase in new private housing activity, showing that in Quarter 4 (Oct to Dec) 2015 private housing sector continued to drive growth. The decline in construction output from private industrial work could be due to the deferrals of energy and commercial construction projects. According to the [Bank of England's Agents' Summary of Business Conditions](#) deferral or cancellation of energy-related projects had weighed on activity among some construction contacts.

GDP growth outpaced construction output growth between Quarter 4 (Oct to Dec) 2014 and Quarter 4 (Oct to Dec) 2015: GDP growth was 2.1% over this period while construction output growth was 1.0%. Whereas quarterly GDP growth remained broadly similar throughout 2015, varying between 0.4% and 0.6% growth, construction output growth has been more volatile, increasing by 1.9% in Quarter 1 (Jan to Mar) 2015 and contracting by 1.6% in Quarter 3 (July to Sept) 2015. Investment in dwellings increased by 1.5% in the fourth quarter of 2015 compared with the previous quarter, and this was largely driven by growth in investment in private sector dwellings, partly offset by a decline in public sector dwellings. This is consistent with the public-private make-up of housing activity in the construction industry and the measure of construction output, though there is likely to be a lag between construction output and the corresponding investment measurement of that activity.

## 8. International perspective

Output in the construction industry follows the [Eurostat Short Term Statistics \(STS\)](#) regulation for production in construction. Before any comparisons are made with the euro area or EU28, it is worth noting that the UK is the only member state to follow the [A method](#) for compiling [production in construction statistics](#).

The latest release of [production in construction](#) showed that construction output in the euro area (EA19) increased by 1.9% and by 1.0% in the EU28 in January 2016 compared with December 2015. The Great Britain estimate for January 2016 showed that construction output decreased by 0.4%. It should be noted that an accurate comparison cannot be made as Eurostat data are calculated on a 2010 = 100 basis, while Great Britain data are calculated on a 2012 = 100 basis.

Outside of the EU, the US Census Bureau release Value of construction put in place published on 1 April 2016, showed provisional estimates of construction output decreased by 0.5% in February 2016 compared with January 2016 and increased by 10.3% compared with February 2015.

### International comparisons

International construction comparisons are compiled by Eurostat. The estimates produced in this bulletin are included in these comparisons. Further information can be found on the [Eurostat](#) web page.

## 9. Background notes

### 1. What's new

An article comparing ONS data with Markit CIPS data has been published on our website today.

We have carried out further analysis on the effects of the extension of the survey population to include [PAYE-based businesses](#). This showed there was a negligible effect on top level construction output.

### 2. Statistical continuous improvement

In March 2012, as part of our [Statistical Continuous Improvement programme](#), we published a [Review of Sample Design and Estimation Methodology for Construction Output](#). This report evaluated the sample design and estimation methods used on the Construction Output Survey. The conclusions of the review were that the current sample is performing well and that the current methodology for estimation within the survey produces the smallest standard error.

In response to user feedback and in line with the announcement made in the article "[Improvements to the methods used to compile Output in the Construction Industry statistics](#)", this statistical bulletin now contains monthly seasonally adjusted chained volume estimates. Due to the potential for confusion when comparing constant price (volume) and chained volume measures, all references to constant price series for construction output have been removed from this, and future bulletins.

### 3. Understanding the data

#### I. Interpreting the data

When making comparisons it is recommended that users focus on chained volume measures or constant price (volume), seasonally adjusted estimates as these show underlying movements rather than seasonal movements.

Construction output estimates are subject to revision because of:

- late responses to the Construction Output Survey
- revisions to seasonally adjusted factors which are re-estimated every quarter

- annual updating of the Inter-Departmental Business Register (IDBR) that forms the basis of the sampling for the Construction Output Survey - this occurs in April and can have an effect on the results published in May

## II. Definitions and explanations

[Definitions of terminology](#) found within the main statistical bulletin are available on our website.

### 4. Use of the data

Output in the construction industry estimates are widely used both internally and externally and have been identified by legal requirement and user engagement surveys.

The main users of data from the output of the construction industry dataset are:

- United Kingdom National Accounts
- Eurostat, the statistical office of the European Union, in order to comply with statutory legislation on short-term business statistics (STS) - short-term business statistics provide information on the economic development of four major domains: industry, construction, retail trade and other services
- industry analysts requiring estimates of the construction industry output of Great Britain
- trade associations making UK and international comparisons and to forecast trends in the construction industry
- other government departments including; the Department for Business, Innovation and Skills (BIS), HM Treasury (HMT), Department for Communities and Local Government (DCLG) and the Office for Budgetary Responsibility (OBR)

As well as being a main indicator of the performance of construction companies, the results of the survey also contribute to the estimate of the gross domestic product of the UK, contributing approximately 5.9% of GDP.

More information on the uses made of [short-term economic statistics](#) is available on our website.

### 5. Methods

Our monthly construction output survey measures output from the construction industry in Great Britain. It samples 8,000 businesses, with all businesses employing over 100 people or with an annual turnover of more than £60 million receiving a questionnaire by post every month.

Estimates are based on output data collected through the monthly construction output survey. Response rates at the time of publication are included for the current month, and the 3 months prior. The response rates for those historical periods are updated to reflect the current level of response, incorporating data from late returns. There are 2 response rates included, with 1 percentage for the amount of turnover returned, and the other percentage for the amount of questionnaire forms.

**Table 3: Overall response rates (%)**

Great Britain		
Year Period	Turnover	Questionnaire
2016 February	83.6	73.6
January	91.7	79.0
2015 December	92.5	79.1
November	92.9	77.2

Source: Office for National Statistics

## 6. Quality

The latest [Quality and Methodology report for the Output of the Construction Industry estimates](#) can be found on our website.

The latest [Quality and Methodology report for New Orders in the Construction Industry estimates](#) can be found on our website.

## 7. Revision policy

Construction output conforms to the standard [national accounts revision policy](#), which can be found on our website. In line with this, the construction output release for February 2016 only has revisions from January 2016.

Figures for the most recent months are provisional and subject to revision in light of (a) late responses to the Monthly Business Survey MBS and (b) revisions to seasonal adjustment factors which are re-estimated every period.

## 8. Revisions

One indication of the reliability of the main indicators can be obtained by monitoring the size of revisions. Analysis of the previously published quarterly seasonally adjusted chained volume measure series has shown that revisions to construction data are small. Generally these quarterly revisions are less than 1 percentage point when compared with the final revised period 5 quarters after initial publication. This indicates that the published estimates are a reliable snapshot of the output in the industry at the date of publication.

The size and pattern of revisions for both output and new orders data which have occurred in the open period can be found in the [revision triangles](#) on the construction web page. Please note that these indicators only report summary measures for revisions. The revised data may be subject to sampling or other sources of error. Details about this revisions material can be found on [our revisions page](#).

It should be noted that due to seasonal adjustment taking place on a short span of data points used to interpret the seasonal effects, there is potential for increased revisions until the seasonal pattern is established within the time series. The seasonal pattern is generally established after 60 months in a monthly time series.

Please note that a monthly seasonally adjusted chained volume series is not available pre-2010. This is due to monthly data not being available for this period. These data are a requirement for creating previous year's prices from which chain linked volume measures are created.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

# 3A.A CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED PERCENTAGE CHANGE ON SAME PERIOD A YEAR EARLIER

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
