

Construction output in Great Britain: July 2026

Short-term measures of output by the construction industry in July 2026.

15 October 2026

Notice

11 September 2026

We have identified a data error within the public housing new work sector from January 2022. While this error increases the level of construction output by approximately 1.2% from January 2022 onwards, growth in construction output is only affected for the month of January 2022, increasing from 1.2% to 1.7%. Users should note that other factors will have contributed to this increase, such as an improvement in a deflator and new seasonal parameters being implemented. Note that there is no impact to gross domestic product (GDP) growth to one decimal place.

This error was because incorrect data were used while processing improvements for Blue Book 2025. Data will be corrected in accordance with our National Accounts Revisions Policy. Data from January 2024 have now been corrected in line with our GDP quarterly national accounts: July to September 2025 bulletin that published on 22 December 2025. Data for 2022 and 2023 will be corrected in Blue Book 2026.

1 . Main points

- Total construction output is estimated to have fallen by 0.5% in the three months to July 2026; this follows four consecutive increases in the three-monthly series, with strong growth seen in the three months to April and May, of 1.3% and 1.5%, respectively.
- Over the three-month period, both new work, and repair and maintenance, fell, by 0.4% and 0.7%, respectively.
- At the sector level, six out of the nine sectors fell in the three months to July 2026; the main negative contribution to the decrease was private housing repair and maintenance, which fell by 1.7%.
- Monthly construction output is estimated to have grown by 0.1% in July 2026; this follows a decrease of 0.1% in June 2026 and a decrease of 0.8% in May 2026.
- The increase in monthly output in July 2026 came solely from an increase in repair and maintenance, which grew by 0.8%, while new work fell by 0.4%; the main contribution to the monthly increase in repair and maintenance was private housing repair and maintenance, which grew by 1.7%, while the largest contribution to the decrease in total new work was a fall of 4.9% in private housing new work.

2 . Data on construction in Great Britain

[Output in the construction industry](#)

Dataset | Released 11 September 2026

Monthly construction output for Great Britain at current price and chained volume measures, seasonally adjusted by public and private sector. Quality measures, including response rates.

[Output in the construction industry: subnational and subsector](#)

Dataset | Released 13 August 2026

Quarterly non-seasonally adjusted type of work and regional data at current prices, Great Britain.

[Construction output price indices](#)

Dataset | Released 13 August 2026

A summary of the Construction Output Price Indices (OPIs) from January 2014 to June 2026, UK.

[New orders in the construction industry](#)

Dataset | Released 13 August 2026

Quarterly new orders at current price and chained volume measures, seasonally adjusted by public and private sector. Quarterly non-seasonally adjusted type of work and regional data.

[Construction statistics annual tables](#)

Dataset | Released 19 February 2026

The construction industry in Great Britain, including value of output and type of work, new orders by sector, number of firms and total employment.

[Output in the Construction Industry – Customise my data](#)

Dataset | Released 14 May 2026

Customise My Data (CMD) is our way of providing filterable, explorable data suitable to individual user needs.

3 . Glossary

Construction output estimates

Construction output estimates are monthly estimates of the amount of output chargeable to customers for building and civil engineering work done in the relevant period, excluding Value Added Tax (VAT) and payments to subcontractors.

Seasonally adjusted estimates

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, leap years such as 2024) and seasonal effects (for example, decreased activity at Christmas because of site shutdowns) from the non-seasonally adjusted estimates.

Value estimates

The value estimates reflect the total value of work that businesses have completed over a reference month.

Volume estimates

The volume estimates are calculated by taking the value estimates and adjusting to remove the impact of price changes.

4 . Data sources and quality

Quality and methodology

More quality and methodology information (QMI) is available in:

- our [Construction output QMI](#)
- our [Construction output price indices \(OPIs\) QMI](#)

Data error in public new housing sector

We have identified a data error within the public housing new work sector from January 2022. While this error increases the level of construction output by approximately 1.2% from January 2022 onwards, growth in construction output is only affected for the month of January 2022, increasing from 1.2% to 1.7%. Users should note that other factors will have contributed to this increase, such as an improvement in a deflator and new seasonal parameters being implemented. Note that there is no impact to gross domestic product (GDP) growth to one decimal place.

This error was because of incorrect data being used while processing improvements for the Blue Book 2025. Data from January 2024 has now been corrected in our Quarterly National Accounts release published on 22 December 2022. In accordance with the National Accounts Revisions Policy, data for 2022 and 2023 will be corrected in the 2026 Blue Book.

We apologise for this data error. We have put in place additional quality assurance to improve our process and prevent a similar error in the future.

Revisions to construction output in this release

This release contains no revisions to previously published data and is consistent with the [National Accounts Revisions Policy](#). This has been updated to ensure we reflect the dynamic nature of the UK economy.

For further information on the revisions profile, see our [Output in the construction industry revisions triangle \(one-month growth\) dataset](#) and our [Output in the construction industry revisions triangle \(three-month growth\) dataset](#).

Seasonal adjustment

Our monthly construction estimates are seasonally adjusted. Seasonal adjustment is the process of removing the variations associated with the time of year, or the arrangement of the calendar, from a data time series.

Construction estimates, as for many data time series, are difficult to analyse using raw data because seasonal effects dominate short-term movements. Identifying and removing the seasonal component leaves the trend and irregular components.

The Office for National Statistics (ONS) uses the X-13-ARIMA-SEATS approach to seasonal adjustment. Seasonal adjustment parameters are monitored closely and regularly reviewed. For more information, please see our [seasonal adjustment methodology page](#).

In our monthly estimates, seasonal adjustment is applied at the sector level and the seasonally adjusted series are aggregated to create estimates by total output. As part of our quality assurance approach, residual seasonality checks are regularly completed by our time series analysis team on both the directly seasonally adjusted series and the indirectly derived aggregate time series.

Based on our quality assurance as part of this publication, there is no statistically significant residual seasonality in our aggregate estimates in the period from January 1997 to July 2026.

This topic is explored further in our [article on assessing residual seasonality](#), published on 12 May 2026.

Subnational and subsector construction output

Data on new orders supplied by Barbour ABI are used to model the breakdown of the overall output figures for Great Britain into the lower level and regional data. This is shown in Tables 1 and 2 of our [Output in the construction industry: subnational and subsector dataset](#). More detail is available in our [Quality assurance of administrative data used in construction statistics methodology](#).

Bias adjustment

Typically, since the move to monthly GDP estimates, an adjustment to address any bias in survey responses for construction output is applied to the early construction output monthly estimates. We show this in our [Improvements to construction statistics: Addressing the bias in early estimates of construction output, June 2018 article](#).

Response rates for July 2026 showed improvement compared with levels in recent years since the coronavirus (COVID-19) pandemic. The survey turnover response rate for July 2026 was 80.0%. This follows first estimate response rates of 75.7% in June 2026 and 83.3% in May 2026. We have continued not to apply a bias adjustment since May 2020 while we review this approach. More information on our response rates is available in our [Output in the construction industry dataset](#).

Differences with monthly GDP construction estimates

In Blue Book 2021, we introduced a new framework to improve how we produce volume estimates of GDP for balanced years as part of the supply use process. This was explained in our [Producing an alternative approach to GDP using experimental double deflation estimates article](#). This framework included the implementation of double-deflated industry-level gross value added (GVA) for the first time. This improvement was reflected in the [GDP quarterly national accounts, UK: April to June 2021 bulletin and dataset](#) and [GDP monthly estimate, UK: August 2021 bulletin](#) for the first time.

As a result, volume estimates in the monthly GDP and construction outputs releases will differ for the period 1997 to 2020. This is because the construction publication measures the volume of construction work (output), while the GDP series measures GVA (that is, output minus intermediate consumption). Construction estimates will align, but on a growth basis from January 2021 onwards.

Information and indicative effects of this change to industry-level GVA volume can be found in our [Impact of double deflation on industry chain volume measure annual estimates article](#) and our [Impact of Blue Book 2021 changes on quarterly volume estimates of gross domestic product by industry article](#).

Accredited official statistics

These accredited official statistics were independently reviewed by the Office for Statistics Regulation in March 2019. They comply with the standards of trustworthiness, quality and value in [the Code of Practice for Statistics](#) and should be labelled "accredited official statistics".

Review of release times for market-sensitive economic statistics

We are reviewing the release times for our market-sensitive economic statistics, such as Construction output in Great Britain. This review will consider whether the current arrangements continue to best serve the public good, support user needs and align with the principles set out in the [Code of Practice for Statistics](#).

We are running [a consultation](#) to gather evidence on the impact of different release times. The consultation asks how you use market-sensitive economic statistics, your views on potential release time options, and any other considerations. Please note that this consultation will be closing on Friday 30 October 2026.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

2A.A CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

2B.A CONSTRUCTION OUTPUT: VOLUME NON-SEASONALLY ADJUSTED BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

3A.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED

PERCENTAGE CHANGE ON PREVIOUS MONTH

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

4A.A CONSTRUCTION OUTPUT: VALUE SEASONALLY ADJUSTED CURRENT PRICES BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
