1 . Main points

- Construction output fell 0.8% in May 2021 with the level of output remaining slightly above its pre-pandemic February 2020 level; new work and repair and maintenance both contributed to the monthly decline in May 2021 with anecdotal evidence from businesses suggesting the adverse weather conditions being a contributing factor.
- Monthly construction fell by 0.8% in May 2021 from a month earlier because of declines in both new work (0.4%) and repair and maintenance (1.5%).
- The level of construction output in May 2021 was 0.3% (£43 million) above the February 2020 pre-pandemic level; while new work was 3.5% (£320 million) below the February 2020 level, repair and maintenance work was 7.5% (£363 million) above the February 2020 level.
- In contrast to the monthly fall, construction output grew by 6.3% in the three months to May 2021 compared with the previous three-month period, with increases in both new work and repair and maintenance of 6.6% and 5.8% respectively.
- The increase in new work (6.6%) in the three months May 2021 was because of growth seen in all sectors, the largest contributors to this growth were private housing new work and infrastructure, which grew by 7.4% and 9.7% respectively
- The increase in repair and maintenance (5.8%) in the three months to May 2021 was because of growth in non-housing and private housing repair and maintenance, which grew by 9.0% and 4.7% respectively.

2 . Construction output in May 2021

Monthly construction output fell by 0.8% in May 2021 compared with April 2021, falling to £13,960 million, and follows the 0.7% monthly decline in April 2021.

These recent declines in monthly growths, follow exceptionally strong growth in February and March 2021 (3.7% and 4.7%) respectively. In May 2021 anecdotal evidence received from survey returns suggested adverse weather conditions (PDF, 105KB) (the fourth wettest May on record since 1862) were a contributing factor to the fall, as businesses lost working days.

Figure 1: The monthly index in May 2021 fell for the second consecutive month following strong increases in February and March 2021

Monthly all work index, chained volume measure, seasonally adjusted, Great Britain, January 2010 to May 2021

Source: Office for National Statistics - Construction Output and Employment

Notes:

1. Monthly output records began in January 2010.

With the 0.8% fall in May 2021, the level of construction output is now 0.3% (£43 million) above its February 2020 pre-pandemic level, with a mixed profile of recovery at a type of work level (Table 1).

While repair and maintenance is now 7.5% (£363 million) above the February 2020 level, new work has still yet to recover and is 3.5% (£320 million) below the pre-pandemic level.

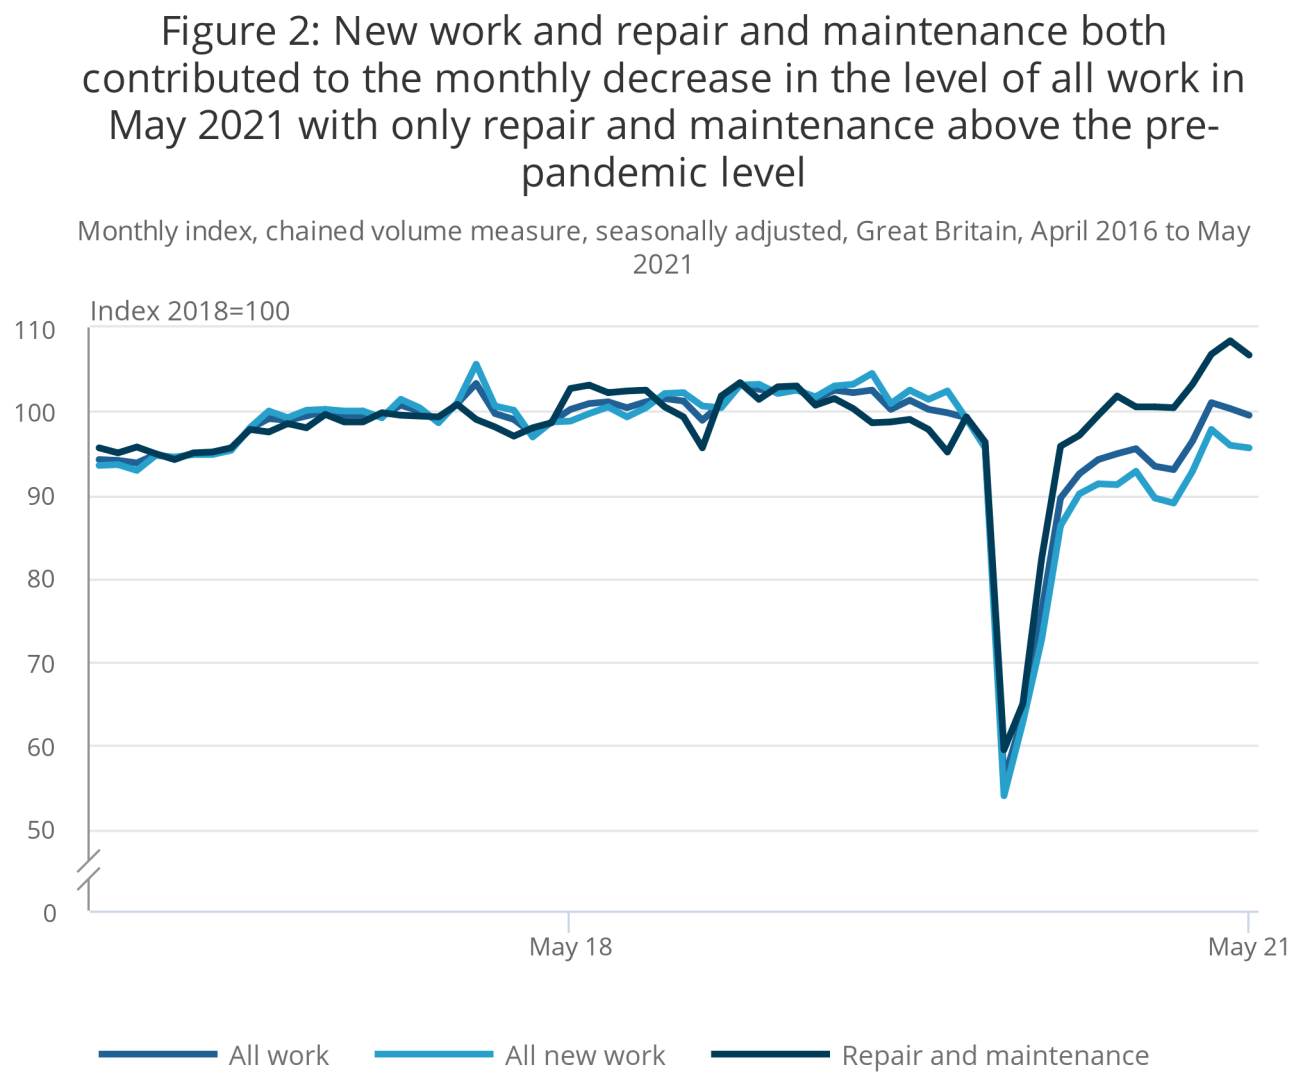

Table 1: Construction output main figures, comparison periods, Great Britain
Chained volume measure, seasonally adjusted, percentage change

Type of work		Initial fall: change in construction output February 2020 to April 2020 (%)	Recovery: change in construction output April 2020 to May 2021 (%)	Difference in construction output February 2020 to May 2021 (%)
Total all work		-43.6	77.9	0.3
	Total all new work	-45.5	77.0	-3.5
	Total repair and maintenance	-40.1	79.4	7.5
New housing				
	Public	-69.6	168.5	-18.4
	Private	-59.8	155.2	2.7
Other new work				
	Infrastructure	-24.1	58.6	20.4
	Public	-26.2	22.8	-9.4
	Private industrial	-52.7	48.0	-30.0
	Private commercial	-44.3	46.0	-18.7
Repair and maintenance				
	Public housing	-51.2	85.8	-9.4
	Private housing	-49.4	112.1	7.4
	Non-housing	-30.4	61.2	12.2

3 . Detailed growth rates

Table 2: Construction output main figures, May 2021, Great Britain
Chained volume measure, seasonally adjusted, £ million and percentage change

Type of work		Value £ million	Most recent month on the previous month	Most recent month on year	Most recent three-months on three-months	Most recent three-months on year
Total all work		13,960	-0.8	56.5	6.3	39.7a
	Total all new work	8,726	-0.4	52.3	6.6	36.3a
	Total repair and maintenance	5,234	-1.5	64.2	5.8	45.8a
New housing						
	Public	451	-6.8	101.9	13.2	53.8a
	Private	3,029	1.4	110.2	7.4	67.9a
Other new work						
	Infrastructure	2,187	2.3	27.1	9.7	29.8a
	Public	803	-4.3	23.7	1.3	17.4a
	Private industrial	327	-6.1	21.8	1.1	6.8
	Private commercial	1,929	-1.7	35.0	4.2	18.1a
Repair and maintenance						
	Public housing	617	-2.0	86.6	-3.1	37.9a
	Private housing	1,873	-2.5	90.2	4.7	63.4a
	Non-housing	2,745	-0.7	46.6	9.0	37.2a

Source: Office for National Statistics - Construction Output and Employment

Notes:

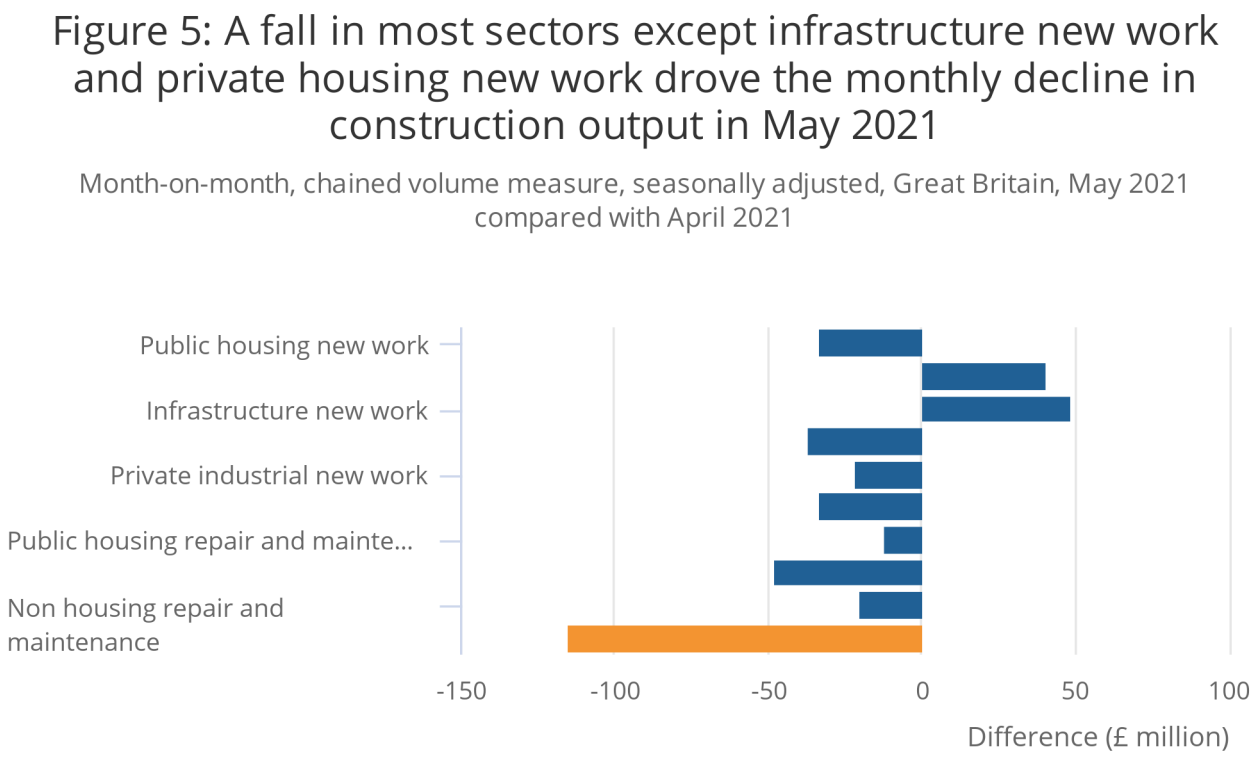

1. a= This denotes a record increase in growth for this series type since the monthly output records began in January 2010.

4 . Month-on-month construction output growth in May 2021 (in monetary terms)

The 0.8% fall in construction output in May 2021 represents a fall of £115 million in monetary terms compared with April 2021.

Figure 5: A fall in most sectors except infrastructure new work and private housing new work drove the monthly decline in construction output in May 2021

Month-on-month, chained volume measure, seasonally adjusted, Great Britain, May 2021 compared with April 2021

Source: Office for National Statistics - Construction Output and Employment

Notes:

1. Please note that sector estimates may not sum because of rounding.

Private housing repair and maintenance was the largest contributor to the monthly decline, falling by 2.5% (£48 million).

Infrastructure new work and private housing new work were the only two sectors that saw monthly growth in May 2021, of 2.3% (£49 million) and 1.4% (£41 million) respectively.

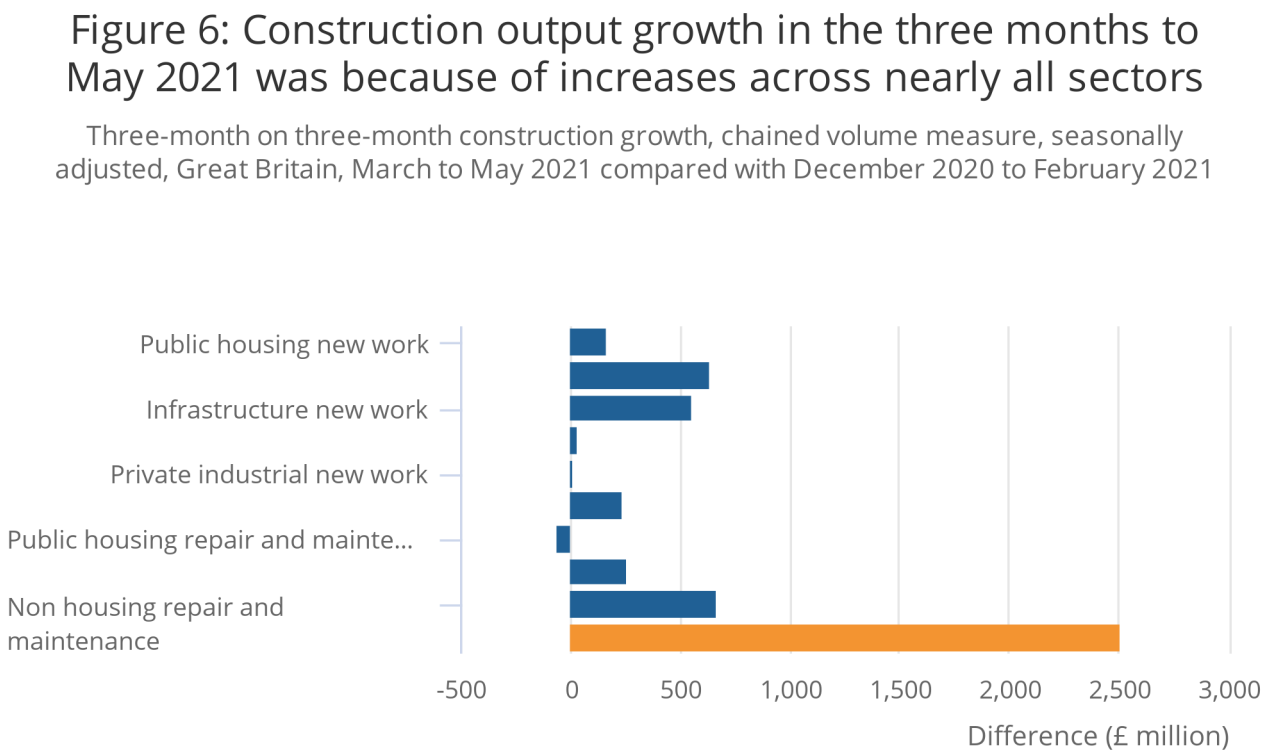

In infrastructure, anecdotal evidence suggests the mixture of a strong pipeline of orders before the coronavirus (COVID-19) pandemic and being able to more easily implement social distancing measures on larger civil engineering sites has meant infrastructure has performed relatively strong over the pandemic period. For private new housing, anecdotal evidence suggests the stamp duty holiday continues to drive demand for housing activity in May 2021.

5 . Three-month on three-month construction output growth in May 2021 (in monetary terms).

Construction output grew by 6.3% (£2,512 million) in the three months to May 2021. Outside of August 2020 to November 2020 this is the largest growth in the three-month on three-month series since monthly records began in January 2010.

Figure 6: Construction output growth in the three months to May 2021 was because of increases across nearly all sectors

Three-month on three-month construction growth, chained volume measure, seasonally adjusted, Great Britain, March to May 2021 compared with December 2020 to February 2021

Source: Office for National Statistics - Construction Output and Employment

Notes:

1. Please note that sector estimates may not sum because of rounding.

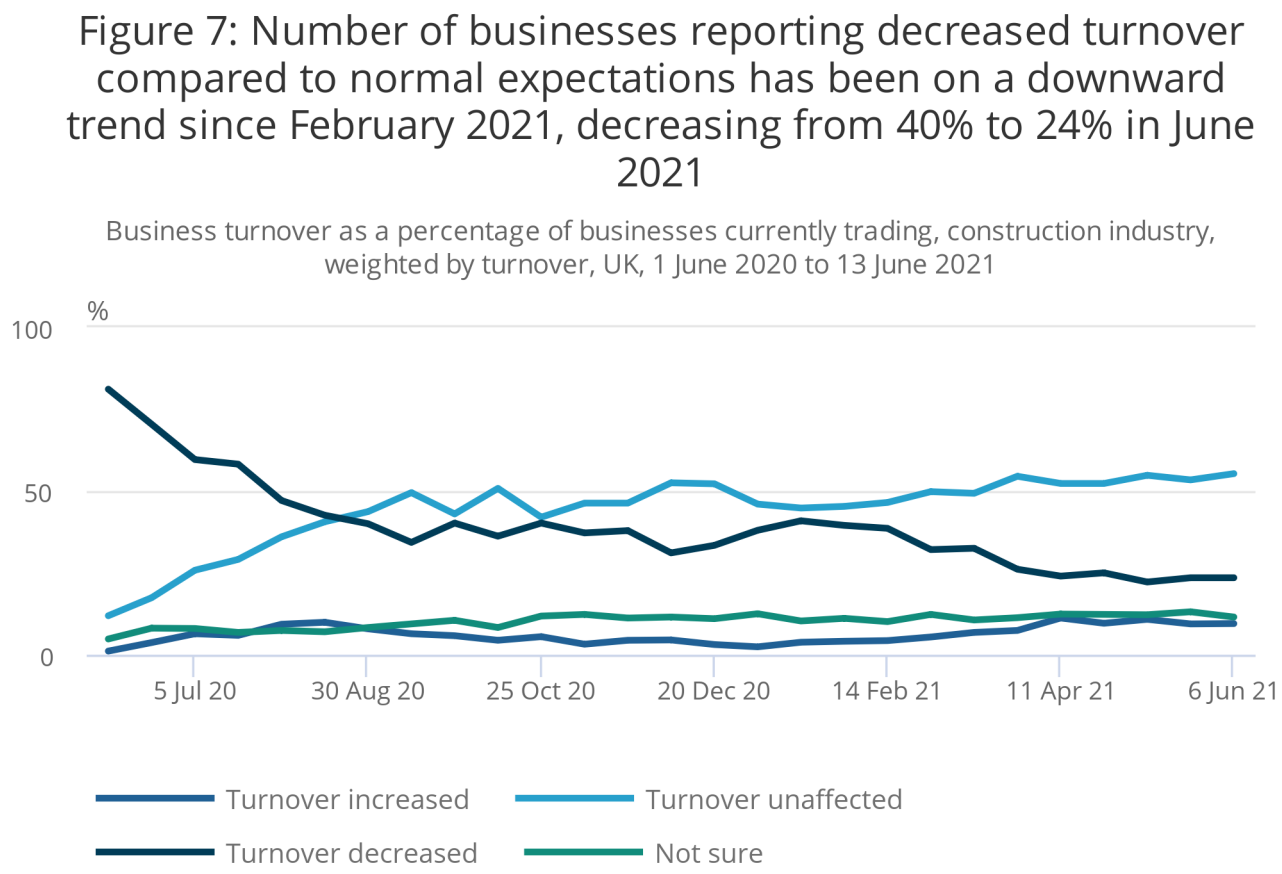

New work grew by 6.6% (£1,640 million) in the three months to May 2021, the largest contributor to which was private housing which grew by 7.4% (£639 million).

Repair and maintenance grew by 5.8% (£872 million) in the three months to May 2021. This was because of growth in both non-housing repair and maintenance and private housing repair and maintenance which grew by 9.0% (£670 million) and 4.7% (£261 million).

Figure 7 shows a time series of how the fortnightly construction turnover estimates compare to normal expectations for this time of year from the Business Insights and Conditions Survey (BICS).

Figure 7: Number of businesses reporting decreased turnover compared to normal expectations has been on a downward trend since February 2021, decreasing from 40% to 24% in June 2021

Business turnover as a percentage of businesses currently trading, construction industry, weighted by turnover, UK, 1 June 2020 to 13 June 2021

Source: Office for National Statistics - Business Insights and Conditions Survey (BICS)

Notes:

1. Final weighted results, Wave 7 to Wave 33, of the Office for National Statistics (ONS) Business Insights and Conditions Survey (BICS).

2. The time series is derived using this survey question result at each Wave: "How does your business's turnover for the last two weeks, compare to normal expectations for this time of year?"

3. Construction output estimates are for Great Britain, whereas BICS estimates are for the UK construction sector, with other notable differences including sample size and response rates to the surveys.

Businesses reporting lower turnover than normal has continued to fall since February 2021 to 24% in June 2021. In turn, businesses reporting “turnover increased” or “turnover unaffected” have both steadily increased since February 2021, remaining broadly stable at 10% and 55% in the latest Wave 33, respectively. This suggests businesses have been returning to normal levels of turnover.

The construction turnover estimates using BICS broadly reflect the three consecutive months of strong growth seen in the three-month on three-month construction output all work estimates since February 2021 to May 2021.

6 . Construction in Great Britain data

Output in the construction industry: sub-national and sub-sector
Dataset | Released 12 May 2021
Quarterly non-seasonally adjusted sub-national and sub-sector data at current prices, Great Britain.

Construction output price indices
Dataset | Released 12 May 2021
Monthly construction Output Price Indices (OPIs) from July 2016 to March 2021, UK.

New orders in the construction industry
Dataset | Released 12 May 2021
Quarterly new orders at current price and chained volume measures, seasonally adjusted by public and private sector. Quarterly non-seasonally adjusted type of work and regional data.

Construction statistics annual tables
Dataset | Released 21 January 2021
The construction industry in Great Britain, including value of output and type of work, new orders by sector, number of firms and total employment.

7 . Glossary

Construction output estimates

Construction output estimates are monthly estimates of the amount of output chargeable to customers for building and civil engineering work done in the relevant period, excluding Value Added Tax (VAT) and payments to subcontractors.

Seasonally adjusted estimates

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, leap years such as 2020) and seasonal effects (for example, decreased activity at Christmas because of site shutdowns) from the non-seasonally adjusted estimates.

Value estimates

The value estimates reflect the total value of work that businesses have completed over a reference month.

Volume estimates

The volume estimates are calculated by taking the value estimates and adjusting to remove the impact of price changes.

8 . Measuring the data

Quality and methodology

More quality and methodology information is available in the Construction output QMI and Construction output price indices QMI.

Sub-national and sub-sector output

Data on new orders supplied by Barbour ABI are used to model the breakdown of the overall output figures for Great Britain into the lower level and regional data seen in Tables 1 and 2 of Construction output: sub-national and sub-sector.

As a result of improvements implemented in our March 2021 dataset, an article addressing these developments including the impact of the changes will be published on 20 July 2021.

Revisions to construction output

Revisions in this release are a result of:

- late responses to survey returns replacing imputations, or revisions to original returns
- revisions to seasonal adjustment factors, which are re-estimated every month and reviewed annually
- revisions to the input series for the Construction Output Price Indices

Table 3: Larger than normal revisions to monthly growth can be seen across all months in 2021 compared with the last release
Monthly growth (percentage points), January 2021 to April 2021, chained volume measure, seasonally adjusted, Great Britain

Month	Previously published (11 June 2021)	Today's publication (9 July 2021)	Revision (percentage points)
Jan 21	0.4	-0.5	-0.9
Feb 21	2.3	3.7	1.4
Mar 21	5.8	4.7	-1.1
Apr 21	-2.0	-0.7	1.3

Source: Office for National Statistics - Construction Output and Employment

For further information on the revisions profile, please see the output in the construction industry revisions triangles published on a one-month and three-month growth basis.

Blue Book 2021

In Blue Book 2021 a new framework will be introduced to improve how we produce volume estimates of GDP for balanced years as part of the supply use process. This framework includes the implementation of double-deflated industry-level gross value added for the first time. This improvement will be reflected in the September quarterly national accounts and October monthly GDP estimates. On 28 June we published Blue Book 2021 indicative impacts of this change to industry level gross value added volume.

Estimates for the construction industry from this new approach will differ to those published in this Construction output release as they account for both the outputs produced and inputs consumed by the industry. There are also some coverage differences given the use of the Annual Business Survey in their compilation.

9 . Strengths and limitations

Data quality

These estimates are widely used by private and public sector institutions to assist in informed decision-making and policymaking.

Further information on Uncertainty and how we measure it for our surveys is available.

Comparability

While monthly data are available for output in the construction industry back to January 2010, a longer time series back to 1997 can be obtained in the Monthly GDP datasets.

Monthly data prior to 2010 are derived using statistical methods from the available quarterly construction output data and should therefore be treated with some caution.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

1A.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED INDEX NUMERS BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

2B.A CONSTRUCTION OUTPUT: VOLUME NON-SEASONALLY ADJUSTED BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

4A.M CONSTRUCTION OUTPUT: VALUE SEASONALLY ADJUSTED CURRENT PRICES BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

4M CONSTRUCTION OUTPUT: VALUE NON-SEASONALLY ADJUSTED CURRENT PRICES BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

3MOMSA CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED PERCENTAGE CHANGE 3 MONTHS ON PREVIOUS 3 MONTHS

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

3MOYSA CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED PERCENTAGE CHANGE 3 MONTHS ON SAME PERIOD A YEAR EARLIER

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
