

Statistical bulletin

Construction output in Great Britain: September 2022, new orders and Construction Output Price Indices, July to September 2022

Short-term measures of output by construction industry in September 2022, contracts awarded for new construction work in Great Britain and a summary of the Construction Output Price Indices (OPIs) in the UK for Quarter 3 (Jul to Sept) 2022.

1 . Main points

- Monthly construction output increased 0.4% in volume terms in September 2022, which is the third consecutive monthly growth following small upward revisions, to 0.6% in August 2022 and 0.2% in July; September 2022 shows the highest level of construction output (£15,125 million) since records began in January 2010.
- The increase in monthly construction output in September 2022 came from increases seen in both new work (0.6%) and repair and maintenance (0.2%) on the month.
- At the sector level, 5 out of the 9 sectors saw a rise in September 2022, with the main contributors to the monthly increase seen in public housing repair and maintenance and infrastructure new work, which increased 11.3% and 2.8%, respectively.
- The level of construction output in September 2022 was 4.0% (£575 million) above the February 2020 pre-coronavirus (COVID-19) pandemic level. New work was 0.3% (£29 million) below its February 2020 level, while repair and maintenance work was 12.0% (£604 million) above the February 2020 level.
- Alongside the monthly increase, construction output saw an increase of 0.6% in Quarter 3 (July to Sept) 2022, although this is the weakest quarterly growth since Quarter 3 2021 (1.1% fall); the increase came solely from growth in new work (2.4%) as repair and maintenance saw a decrease (2.2% fall).
- Total construction new orders increased 6.4% (£774 million) in Quarter 3 2022 compared with Quarter 2 (Apr to Jun) 2022; this quarterly growth came mainly from private commercial new orders, which rose 27.7% (£832 million).
- The annual rate of construction output price growth was 10.1% in the 12 months to September 2022; this has slowed slightly from the record annual price growth in May 2022 (11.5%).

Estimates for September 2022 are affected by the bank holiday for the State Funeral of Her Majesty Queen Elizabeth II, where some businesses may have closed or operated differently on this day.

2 . Construction output in September 2022

Monthly construction output increased 0.4% in September 2022. This is now the third consecutive increase in monthly construction output since June 2022 (0.6% fall), and is the highest level of construction output (£15,125 million) since records began in January 2010.

Figure 1: The monthly all-work construction output index in September 2022 saw an increase on the month, coming from increases in both new work (0.6%) and repair and maintenance (0.2%)

Monthly all-work index, chained volume measure, seasonally adjusted, Great Britain, January 2010 to September 2022

Figure 1: The monthly all-work construction output index in September 2022 saw an increase on the month, coming from increases in both new work (0.6%) and repair and maintenance (0.2%)

Monthly all-work index, chained volume measure, seasonally adjusted, Great Britain, January 2010 to September 2022

Source: Office for National Statistics – Construction Output and Employment

Notes:

1. Monthly output records began in January 2010.

Prices are still historically high, however the annual rate of growth for building materials has slowed from its May 2022 high point in the series (Figure 5), and previous availability issues around sourcing products have eased. Also order books remained strong for businesses, as illustrated with new orders in the construction industry increasing 6.4% in Quarter 3 (July to Sept) 2022, and now being 11.5% above its pre-coronavirus (COVID-19) pandemic level in comparison with Quarter 4 (Oct to Dec) 2019 (Figure 6).

Anecdotal evidence received from returns for our [Monthly Business Survey for Construction and Allied Trades \(MBS\)](#) and our [Business Insights and Conditions Survey \(BICS\)](#) continues the narrative around the increased prices for certain construction products. As in previous months, increased costs of products, most notably concrete, plaster, bricks, sand, gravel and asphalt-related products are mentioned. These high prices coupled with the loss of a working day because of the Bank Holiday for the funeral of Queen Elizabeth II are likely to have lessened growth in September 2022.

Detailed growth rates

Table 1: Construction output main figures, September 2022
Seasonally adjusted, chained volume measure, £ million and percentage change, Great Britain

Type of work	Value £ million	Most recent month on the previous month	Most recent month on year	Most recent three-months on three-months	Most recent three-months on year	Difference in construction output February 2020 to September 2022
Total all work	15,125	0.4	5.7	0.6	5.7	4.0
Total new work	9,499	0.6	6.5	2.4	5.7	-0.3
Total repair and maintenance	5,626	0.2	4.4	-2.2	5.8	12.0
New housing						
Public	463	5.0	11.7	2.4	3.7	-20.9
Private	3,484	-1.4	9.1	2.4	12.7	10.3
Other new work						
Infrastructure	2,290	2.8	-4.6	1.4	-9.7	22.0
Public	742	2.7	-3.5	-4.1	-5.9	-18.6
Private industrial	640	-2.9	53.1	6.7	59.7	28.3
Private commercial	1,880	1.0	9.1	5.0	8.0	-24.7

Month-on-month construction output growth in September 2022

The 0.4% rise in construction output in September 2022 represents an increase of £66 million in monetary terms compared with August 2022, with 5 out of the 9 sectors seeing an increase on the month.

Figure 2: All work saw an increase on the month in September 2022 (0.4%) with 5 out of the 9 sectors seeing an increase

Contributions to monthly growth (September 2022 compared with August 2022), chained volume measure, seasonally adjusted, Great Britain, percentage points

Figure 2: All work saw an increase on the month in September 2022 (0.4%) with 5 out of the 9 sectors seeing an increase

Contributions to monthly growth (September 2022 compared with August 2022), chained volume measure, seasonally adjusted, Great Britain, percentage points

Source: Office for National Statistics – Construction Output and Employment

Notes:

1. Please note that sector estimates may not sum because of rounding.

Public housing repair and maintenance, and infrastructure new work were the largest contributions to the monthly increase in September 2022, increasing 11.3% (£63 million) and 2.8% (£63 million), respectively.

Anecdotal evidence gathered from businesses responding to MBS, for Construction and Allied Trades, and BICS suggested some new projects were continuing as costings were agreed prior to the recent price increases and as such the construction firms were having to absorb these. Some businesses have also mentioned they have seen an increase in work load during this time because of a rise in demand for more efficient energy usage.

Quarter-on-quarter construction output growth in Quarter 3 2022

Alongside the monthly increase, construction output rose to 0.6% (£276 million) in Quarter 3 2022. This is the weakest quarterly growth since Quarter 3 2021, which fell 1.1%.

This quarterly increase came solely from an increase seen in new work (2.4%) as repair and maintenance saw a decrease (2.2% fall).

Figure 3: All work saw an increase in the three months to September 2022 (0.6%), with private commercial new work the main contributor

Contributions to three-month -on-three-month growth (July to September 2022 compared with April to June 2022), chained volume measure, seasonally adjusted, Great Britain, percentage points

Figure 3: All work saw an increase in the three months to September 2022 (0.6%), with private commercial new work the main contributor

Contributions to three-month -on-three-month growth (July to September 2022 compared with April to June 2022), chained volume measure, seasonally adjusted, Great Britain, percentage points

Source: Office for National Statistics – Construction Output and Employment

Notes:

1. Please note that sector estimates may not sum because of rounding.

Of the 9 sectors, 5 saw an increase in Quarter 3 2022, with the largest contributors being private commercial, and private housing new work. These sectors increased 5.0% (£269 million) and 2.4% (£242 million), respectively.

Figure 4 illustrates the slowing in the rate of overall construction output growth since the start of 2022. This is coming from repair and maintenance activity, which decreased 2.2% in September 2022. In September 2022, all 3 sectors within repair and maintenance saw decreases.

Figure 4: The rate of construction output growth has decreased in the three-month-on-three-month measure since the start of 2022, with repair and maintenance seeing a large fall

Three-month-on-three-month growth (March 2022 to September 2022), chained volume measure, seasonally adjusted, Great Britain, percentage points

Figure 4: The rate of construction output growth has decreased in the three-month-on-three-month measure since the start of 2022, with repair and maintenance seeing a large fall

Three-month-on-three-month growth (March 2022 to September 2022), chained volume measure, seasonally adjusted, Great Britain, percentage points

Source: Office for National Statistics – Construction Output and Employment

3 . Construction output price indices in September 2022

Prices in the construction industry, as estimated by our [Construction Output Price Index \(OPI\)](#), increased to 10.1% in the 12-month period to September 2022. Although the rate of annual price growth has slowed slightly from the record increase seen in May 2022, prices still remain above historic price levels.

Figure 5: Annual construction output price growth slowed in September 2022 compared with the record prices seen in May 2022

Annual rate of construction output price growth, percentage change, January 2014 to September 2022

Figure 5: Annual construction output price growth slowed in September 2022 compared with the record prices seen in May 2022

Annual rate of construction output price growth, percentage change, January 2014 to September 2022

4 . New orders in the construction industry in Quarter 3 2022

Total construction new orders increased by 6.4% (£774 million) in Quarter 3 2022 compared with Quarter 2 2022. This partly reverses quarterly falls seen in the first half of 2022 (6.4% and 3.5% respectively). See our [New orders in the construction industry dataset](#) for more detail.

Other new work new orders (that is, non-housing) was the main contributor to quarterly increase in Quarter 3 2022 as it rose 11.6%. This mainly came from private commercial new orders, which increased 27.7% (£832 million). Specifically within private commercial, new orders for offices increased to above the £2 billion mark again, after a large quarterly decrease in Quarter 2 2022. Project-level data suggests that a large number of businesses are continuing to carrying out office refits and refurbishments as workers return to the office.

Figure 6: Total new orders saw a quarterly increase (6.4%) in Quarter 3 2022 for the first time since Quarter 4 2021

Components of work, new orders, constant prices, seasonally adjusted Great Britain, Quarter 3 (July to Sept) 2016 to Quarter 3 (July to Sept) 2022, £millions

Figure 6: Total new orders saw a quarterly increase (6.4%) in Quarter 3 2022 for the first time since Quarter 4 2021

Components of work, new orders, constant prices, seasonally adjusted Great Britain, Quarter 3 (July to Sept) 2016 to Quarter 3 (July to Sept) 2022, £millions

Source: Office for National Statistics and Barbour ABI

Total construction new orders in Quarter 3 2022 are now 11.5% above it pre-pandemic level (Quarter 4 2019) with private new housing the only sector still to recover.

Table 2: Construction new orders main figures, Quarter 3 (July to Sept) 2022
Seasonally adjusted volume, £ million and percentage change, Great Britain

Type of work	Value (£m)	Most recent quarter on previous quarter	Most recent quarter on a year earlier	Most recent year on year	Difference in new orders 2019 Q4 to 2022 Q3
All new work	12,896	6.4	8.5	8.9	11.5
All new housing	3,437	-5.8	-14.0	-4.2	0.8
Public	276	-25.2	-31.3	6.7	22.7
Private	3,160	-3.6	-12.0	-5.2	-0.8
All other work	9,460	11.6	7.4	12.1	15.9
Infrastructure	2,508	6.5	50.2	25.9	19.1
Public	1,455	-1.1	0.8	16.2	11.0
Private industrial	1,657	1.0	10.0	7.2	20.3
Private commercial	3,840	27.7	17.3	12.5	14.0

6 . Glossary

Construction output estimates

Construction output estimates are monthly estimates of the amount of output chargeable to customers for building and civil engineering work done in the relevant period, excluding Value Added Tax (VAT) and payments to subcontractors.

Seasonally adjusted estimates

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, leap years such as 2020) and seasonal effects (for example, decreased activity at Christmas because of site shutdowns) from the non-seasonally adjusted estimates.

Value estimates

The value estimates reflect the total value of work that businesses have completed over a reference month.

Volume estimates

The volume estimates are calculated by taking the value estimates and adjusting to remove the impact of price changes.

7 . Measuring the data

Quality and methodology

More quality and methodology information is available in our:

- [Construction output QMI](#)
- [New orders in construction QMI](#)
- [Construction output price indices QMI](#)

Reasons for revisions in this release

In this release, revisions to construction output estimates are back to July 2022. Monthly growth figures from both July 2022 and August 2022 are revised upwards by 0.1 and 0.2 percentage points, respectively, to 0.2% and 0.6%.

Revisions in this release are a result of:

- late responses to survey returns replacing imputations, or revisions to original returns
- revisions to seasonal adjustment factors, which are re-estimated every month and reviewed annually
- revisions to the input series for the Construction Output Price Indices

For further information on the revisions profile, see our [Output in the construction industry revisions triangle \(one-month growth\) dataset](#) basis and our [Output in the construction industry revisions triangle \(three-month growth\) dataset](#).

Sub-national and sub-sector construction output

Data on new orders supplied by Barbour ABI, as explained in our [methodology, Quality assurance of administrative data used in construction statistics](#), are used to model the breakdown of the overall output figures for Great Britain into the lower level and regional data seen in Tables 1 and 2 of our [Construction output: sub-national and sub-sector dataset](#).

Bias adjustment

Typically, since the move to monthly GDP estimates, an [adjustment, as explained in our article, Improvements to construction statistics from June 2018](#), to address any bias in survey responses for construction output is applied to the early construction output monthly estimates.

As the response rate for September 2022 has improved and is nearing a level of response comparable with pre-coronavirus (COVID-19) pandemic levels, we have applied a bias adjustment for September 2022.

Differences with Monthly GDP construction estimates

In Blue Book 2021, we introduced [a new framework, as explained in our article, Producing an alternative approach to GDP using experimental double deflation estimates](#) to improve how we produce volume estimates of gross domestic product (GDP) for balanced years as part of the supply use process. This framework included the implementation of double-deflated industry-level gross value added (GVA) for the first time. This improvement was reflected in our [September 2021 quarterly national accounts](#) and our [October 2021 monthly GDP estimates](#) for the first time.

As a result, volume estimates in the monthly GDP and construction outputs releases will differ for the period 1997 to 2020 because the construction publication measures the volume of construction work (output), while the GDP series measures GVA (that is, output minus intermediate consumption). Construction estimates will align, however, from January 2021 onwards on a growth basis.

Our articles on the [impact of double deflation](#) and [Blue Book changes](#) provide information and indicative effects of this change to industry-level GVA volume.

Construction Statistics Annual

The 2021 edition of our [construction statistics annual](#), which will have data for the 2021 reference year, will be released on 18 November 2022.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

2A.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

2B.M CONSTRUCTION OUTPUT: VOLUME NON-SEASONALLY ADJUSTED BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

3B.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED PERCENTAGE CHANGE ON SAME PERIOD A YEAR EARLIER

%

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

4A.M CONSTRUCTION OUTPUT: VALUE SEASONALLY ADJUSTED

CURRENT PRICES BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
