1 . Overview

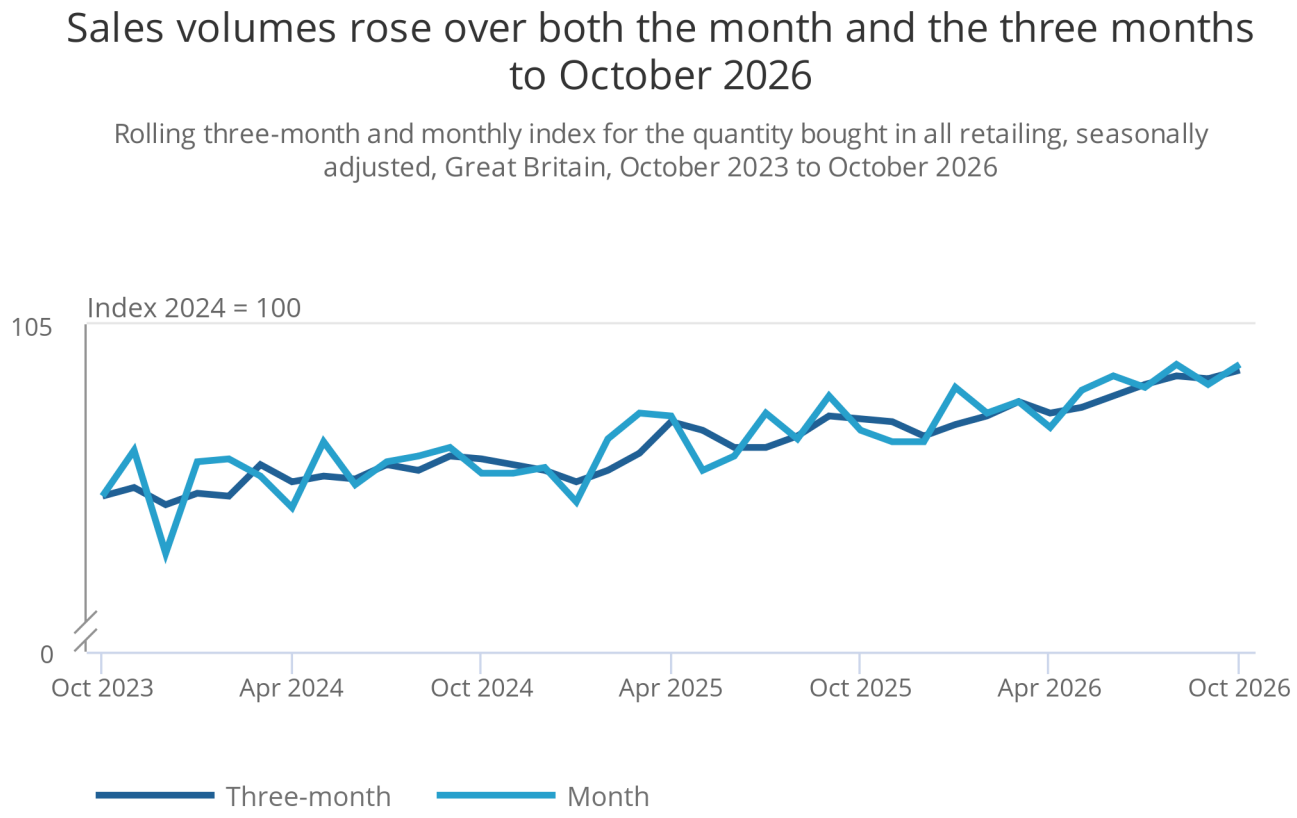

The quantity of goods bought (volume) in retail sales is estimated to have risen by 0.4% in the three months to October 2026, compared with the three months to July 2026. Volumes rose for food stores, while fuel retailers mostly recovered from a fall in the three months to July following a spike in March.

Retail sales volumes are estimated to have risen by 0.7% in October 2026. This follows a fall of 0.6% in September 2026 (revised down from a 0.4% fall in our previous bulletin), and a rise of 0.8% in August 2026 (revised up from a 0.7% rise in our previous bulletin). Food stores sales volumes rose as supermarkets reported increased sales of long-life items such as tinned goods and UHT milk following government advice, while art galleries and clothing stores also rose on the month.

2 . Retail sales in October

Sales volumes rose over both the month and the three months to October 2026

Rolling three-month and monthly index for the quantity bought in all retailing, seasonally adjusted, Great Britain, October 2023 to October 2026

Source: Monthly Business Survey, Retail Sales Inquiry from the Office for National Statistics

Notes:

1. The chart shows the quantity bought in retail sales over time, for both the rolling three-month and the monthly movements.

2. The monthly path shows more volatility than the smoother three-month series.

In the three months to October 2026, sales volumes:

- rose by 0.4% compared with the three months to July 2026
- rose by 1.7% compared with the three months to October 2025

In October 2026, sales volumes:

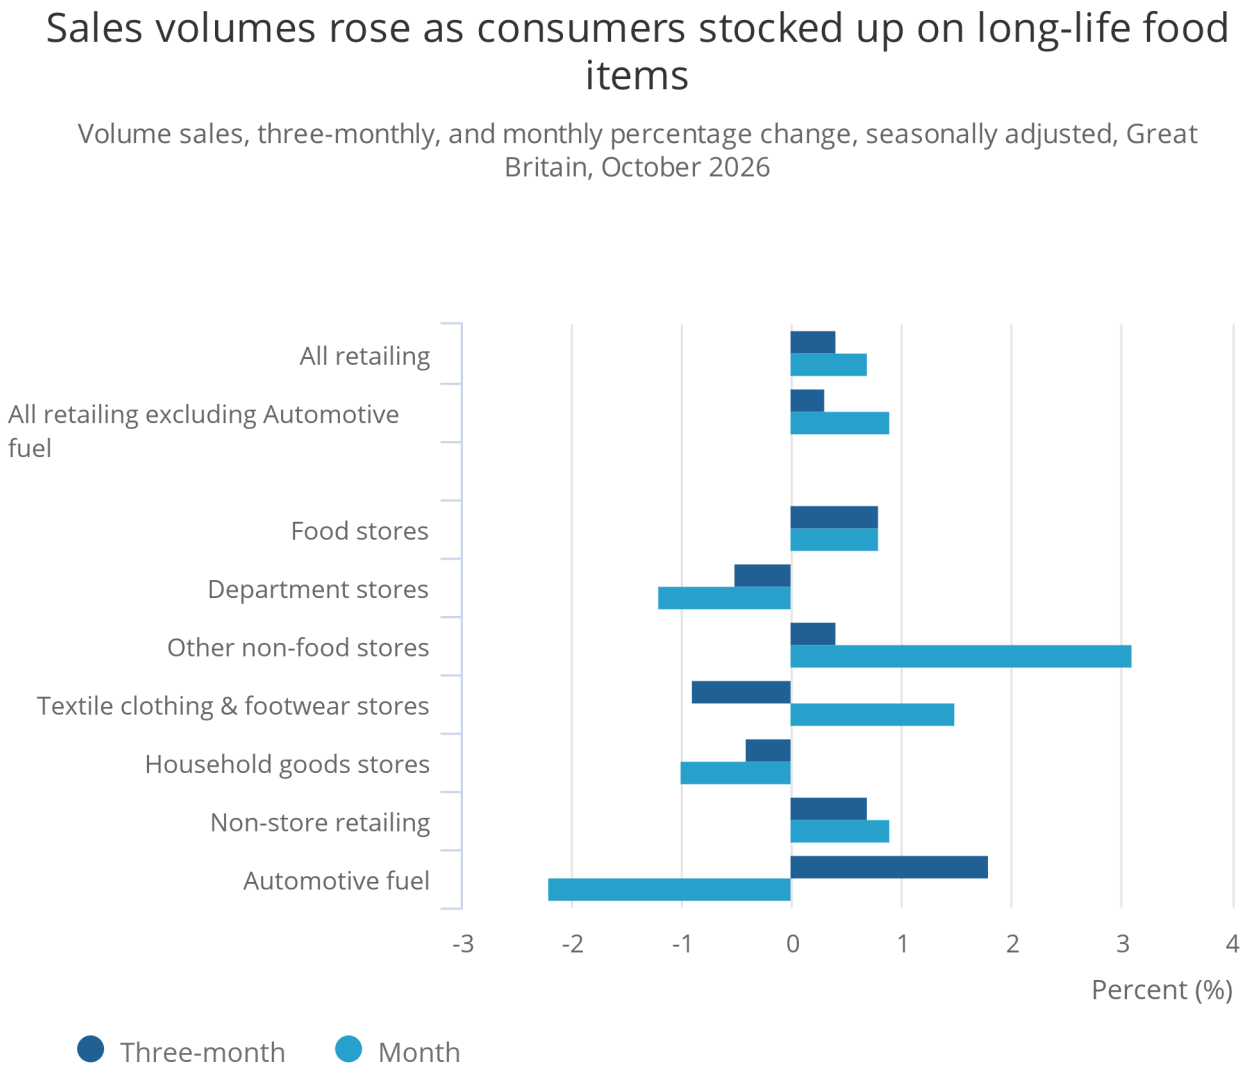

- rose by 0.7% over the month, following a fall of 0.6% in September 2026
- rose by 2.3% compared with October 2025

These data are available in our Retail Sales Index dataset.

3 . Retail sector volumes

Sales volumes rose as consumers stocked up on long-life food items

Volume sales, three-monthly, and monthly percentage change, seasonally adjusted, Great Britain, October 2026

Source: Monthly Business Survey, Retail Sales Inquiry from the Office for National Statistics

Notes:

1. Monthly growth rates can be volatile. Monthly growth should therefore be used with caution and alongside other measures, such as the three-month growth rate.

2. Non-store retailing refers to retailers that do not have a store presence. While the majority is made up of online retailers, it also includes other retailers such as street stalls and markets.

3. More data are available in our Retail Sales Index datasets

Sales volumes rose by 0.4% in the three months to October 2026, compared with the three months to July 2026.

Food stores rose as supermarkets reported an October uplift on emergency items such as UHT milk and tinned goods following the launch of the UK government's Be Ready campaign on 22 October 2026. Meanwhile, specialist food stores such as butchers and bakers reported strong sales volumes in September.

Fuel sales were low in May and June after a spike in sales in March following the outbreak of the conflict in the Middle East, but have since recovered gradually. As a result, sales volumes rose over the three months to October 2026.

Total sales volumes (including automotive fuel) rose by 0.7% over the month to October 2026. Supermarket sales rose following lower clothing sales in September, with October further helped by the boost in long-life food items.

Non-food stores sales volumes (the total of department, clothing, household, and other non-food stores) rose by 1.1% on the month. Other non-food stores were boosted by rises for art galleries, following a quiet September, and sports equipment, games and toy stores. Clothing store sales also rose, which retailers attributed to people buying more per visit, new launches and increased stock following inventory issues in September.

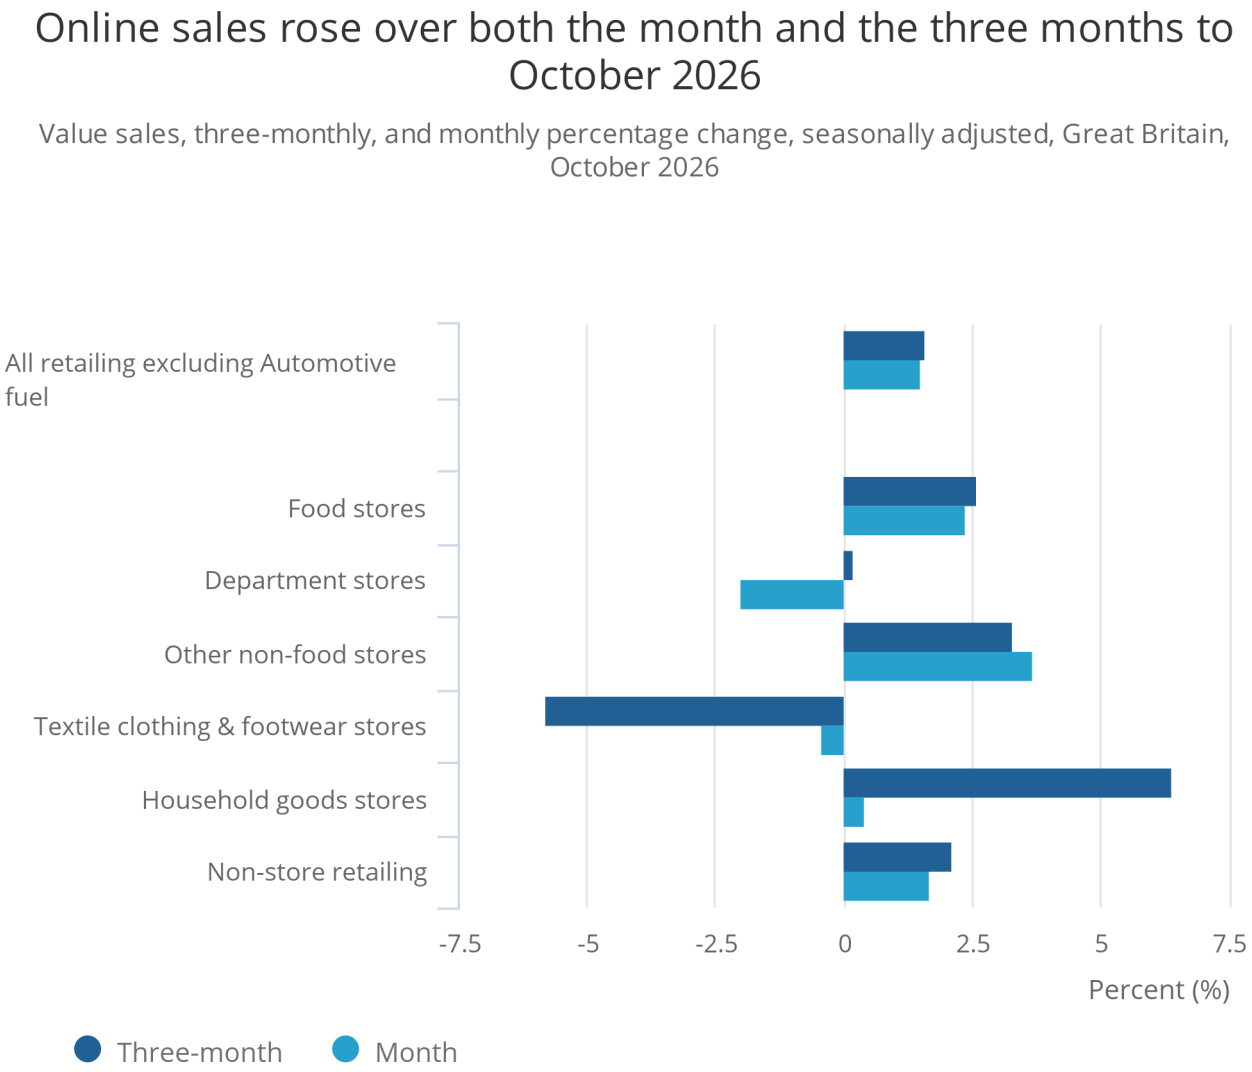

Within non-store retail, volumes partially recovered after a fall in September, with online clothing retailers commenting that the more autumnal October weather supported sales. This followed reports in September that the release of autumn and winter ranges suffered during the unseasonably warm weather.

However, automotive fuel volumes fell back to August levels as prices rose for the third consecutive month.

4 . Online retail values

Online sales rose over both the month and the three months to October 2026

Value sales, three-monthly, and monthly percentage change, seasonally adjusted, Great Britain, October 2026

Source: Monthly Business Survey, Retail Sales Inquiry from the Office for National Statistics

Notes:

1. Monthly growth rates can be volatile. Monthly growth should therefore be used with caution and alongside other measures, such as the three-month growth rate.

2. Non-store retailing refers to retailers that do not have a store presence. While the majority is made up of online retailers, it also includes other retailers, such as street stalls and markets.

3. More data, such as the proportion of sales made online, are available in ourRetail Sales Index internet sales datasets.

The amount spent online, known as "online spending values", rose by 1.6% in the three months to October 2026 compared with the three months to July 2026. Online spending values rose by 8.9% when compared with the three months to October 2025.

Within the monthly series, online sales values rose by 1.5% in October 2026, up from a fall of 0.3% in September, and were 9.7% higher compared with October 2025.

The total spend (the sum of in-store and online sales) rose by 1.2% over the month. As a result, the proportion of sales made online rose from 29.1% in September 2026 to 29.2% in October 2026.

5 . Data on retail sales

Retail Sales Index
Dataset | Released 20 November 2026

Retail sales pounds data
Dataset | Released 20 November 2026
Total sales and average weekly spending estimates for each retail sector in Great Britain in thousands of pounds.

Retail Sales Index internet sales
Dataset | Released 20 November 2026
Internet sales in Great Britain by store type, month, and year.

Retail Sales Index categories and their percentage weights
Dataset | Released 27 March 2026
Retail sales categories and descriptions and their percentage of all retailing in Great Britain.

6 . Data sources and quality

For October 2026, the Retail Sales Index (RSI) survey response rates were 57.5% based on returned forms, which is 1.8 percentage points below the average of the past 12 months. This accounted for 93.8% of total turnover coverage of the sample population, 5.8 percentage points above the average of the past 12 months. Historical response information is available in our Retail sales quality tables dataset.

Information on how we calculated the data, including strengths and limitations, and a glossary of relevant terms, is available in our Retail Sales Index quality and methodology information (QMI) report.

Seasonal adjustment

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, Easter moving between March and April), and seasonal effects (for example, increased spending in December because of Christmas) from the non-seasonally adjusted estimates.

We use the X-13ARIMA-SEATS approach to seasonal adjustment. Seasonal adjustment parameters are monitored closely and are regularly reviewed. Improvements following our full annual seasonal adjustment review were last implemented as part of the June 2026 release. More information is available in our Seasonal adjustment methodology.

Seasonal adjustment is applied at the industry level, and the seasonally adjusted series are aggregated to create estimates by industry sector and total retail. As part of our quality assurance approach, residual seasonality checks are completed regularly by our time series analysis team on both the seasonally adjusted series and the indirectly derived aggregate time series.

Based on current data, we find no residual seasonality in the main aggregate for monthly retail sales estimates. We have separately published our comprehensive methodology on How the Office for National Statistics (ONS) assesses statistical outputs for residual seasonality.

Accredited official statistics

These accredited official statistics were independently reviewed by the Office for Statistics Regulation in March 2015. They comply with the standards of trustworthiness, quality, and value in the Code of Practice for Statistics and should be labelled "accredited official statistics".

Estimates in this table have been produced by combining a breakdown of commodity sales from 57 large retailers with total sales from other retailers.

The monthly periods consist of 4 weeks except for March, June, September and December which are 5 weeks. January 2025 is also a 5 week period.

The quarterly indices are the weighted averages of the monthly indices for the months within the quarter, the weights being the number of weeks in each monthly period.

1 The Food, drink and tobacco category, Household goods category and Other non-food category include revisions to the commodity classifications provided by respondents.

In July 2018, we increased our sample for the commodity breakdown from 31 to 54 retailers to improve coverage and better represent the commodities sold. Growth rates may not be comparable as a result. This does not impact the main retail sales data.

5 VALUE OF RETAIL SALES BY COMMODITY AT CURRENT PRICES NON-SEASONALLY ADJUSTED
