1 . Overview

The quantity of goods bought (volume) in retail sales is estimated to have risen by 0.9% in Quarter 3 (July to Sept) 2025 when compared with Quarter 2 (Apr to June) 2025. Good weather in July and August helped clothing sales in Quarter 3, while non-store retailers showed sustained monthly rises over both quarters.

Retail sales volumes are estimated to have risen by 0.5% in September 2025, following an increase of 0.6% in August 2025 (revised up from a 0.5% rise in our previous bulletin). Computer and telecommunications retailers' sales volumes grew strongly alongside continued growth among non-store retailers, where online jewellers reported strong demand for gold.

2 . Retail sales in September

Sales volumes hit their highest level since 2022

Rolling three-month and monthly index for the quantity bought in all retailing, seasonally adjusted, Great Britain, September 2022 to September 2025

Sales volumes hit their highest level since 2022

Rolling three-month and monthly index for the quantity bought in all retailing, seasonally adjusted, Great Britain, September 2022 to September 2025

Source: Monthly Business Survey, Retail Sales Inquiry from the Office for National Statistics

Notes:

1. The chart shows the quantity bought in retail sales over time, for both the rolling three-month and the monthly movements.
2. The monthly path shows more volatility than the smoother three-month series.

Sales volumes rose by 0.9% in the three months to September 2025 (Quarter 3) compared with the three months to June 2025 (Quarter 2). When compared with Quarter 3 2024, sales volumes rose by 1.0%

Sales volumes rose by 0.5% over the month during September 2025, following a 0.6% rise in August, and rose by 1.5% over the year to September 2025.

Volumes were down by 1.6% compared with their pre-coronavirus (COVID-19) pandemic level in February 2020.

These data are available in our [Retail Sales Index dataset](#).

3 . Retail sector volumes

Sales volumes rose in Quarter 3 2025 with strong performances by clothing and non-store retailers

Volume sales, three-monthly and monthly percentage change, seasonally adjusted, Great Britain, September 2025

Sales volumes rose in Quarter 3 2025 with strong performances by clothing and non-store retailers

Volume sales, three-monthly and monthly percentage change, seasonally adjusted, Great Britain, September 2025

Source: Monthly Business Survey, Retail Sales Inquiry from the Office for National Statistics

Notes:

1. Monthly growth rates can be volatile. Monthly growth should therefore be used with caution and alongside other measures, such as the three-month growth rate.
2. Non-store retailing refers to retailers that do not have a store presence. While the majority is made up of online retailers, it also includes other retailers, such as stalls and markets.
3. More data are available in our [Retail Sales Index dataset](#).

Sales volumes rose over Quarter 3 (July to Sept) 2025, with good weather in July and August 2025 helping sales of clothing. Non-store retail also had a good quarter, as mail order retailers experienced their eighth consecutive monthly rise. This was partly offset by poor sales volumes of automotive fuel across the quarter.

Total sales volumes rose over the month to September 2025, marking the fourth consecutive monthly rise and bringing volumes to their highest level since July 2022. Non-food stores (the total of department, clothing, household, and other non-food stores) rose by 0.9%. Among other non-food stores, computer and telecommunications retailers grew strongly.

Sales volumes for non-store retail also rose in September 2025, hitting their highest level since February 2022. A notable contributor to this rise was online jewellers reporting a strong demand for gold.

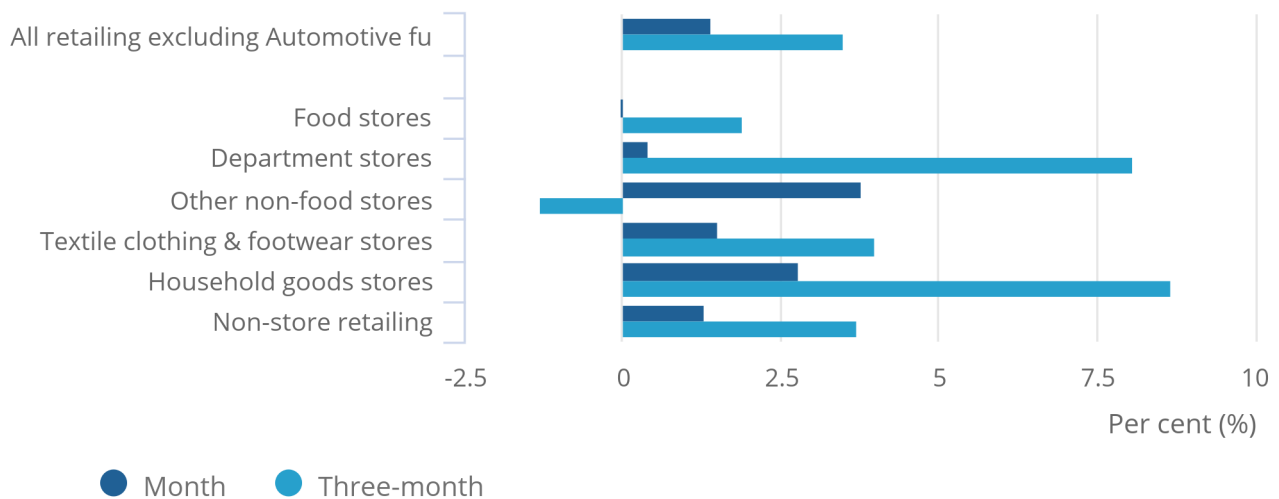

4 . Online retail values

Monthly online sales rose for the eighth consecutive period in September 2025

Value sales, three-monthly and monthly percentage change, seasonally adjusted, Great Britain, September 2025

Monthly online sales rose for the eighth consecutive period in September 2025

Value sales, three-monthly and monthly percentage change, seasonally adjusted, Great Britain, September 2025

Source: Monthly Business Survey, Retail Sales Inquiry from the Office for National Statistics

Notes:

1. Monthly growth rates can be volatile. Monthly growth should therefore be used with caution and alongside other measures, such as the three-month growth rate.
2. Non-store retailing refers to retailers that do not have a store presence. While the majority is made up of online retailers, it also includes other retailers, such as stalls and markets.
3. More data, such as the proportion of sales made online, are available in our [Retail Sales Index internet sales dataset](#).

The amount spent online, known as “online spending values”, rose by 3.5% when comparing Quarter 3 (July to Sept) 2025 with Quarter 2 (Apr to June) 2025, and by 5.0% when comparing with Quarter 3 2024.

With the monthly series, sales values rose by 1.4% over the month to September 2025, and by 5.6% when comparing September 2025 with September 2024.

Total spend (the sum of in-store and online sales) rose by 0.7% over the month. As a result, the proportion of sales made online increased from 27.8% in August 2025 to 28.0% in September 2025.

5 . Data on retail sales

[Retail Sales Index](#)

Total sales and average weekly spending estimates for each retail sector in Great Britain in thousands of pounds.

[Retail Sales Index internet sales](#)

Dataset | Released 24 October 2025

Internet sales in Great Britain by store type, month and year.

[Retail Sales Index categories and their percentage weights](#)

Dataset | Released 28 March 2025

Retail sales categories and descriptions, and their percentage of all retailing in Great Britain.

6 . Data sources and quality

For September 2025, the Retail Sales Index (RSI) survey response rates were 61.2% based on returned forms, 3.3 percentage points above August 2025. This accounted for 84.1% of total turnover coverage of the sample population. Historical response information is available in our [Retail sales quality tables dataset](#).

Information on how we calculated the data, including strengths and limitations, and a glossary of relevant terms, is available in our [RSI quality and methodology information \(QMI\)](#).

Seasonal adjustment

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, Easter moving between March and April) and seasonal effects (for example, increased spending in December because of Christmas) from the non-seasonally adjusted estimates.

The Office for National Statistics (ONS) uses the X-13ARIMA-SEATS approach to seasonal adjustment. Seasonal adjustment parameters are monitored closely and regularly reviewed. Improvements following our annual seasonal adjustment review have been implemented in this release. More information is available on our [Seasonal adjustment methodology page](#).

Seasonal adjustment is applied at the industry level, and the seasonally adjusted series are aggregated to create estimates by industry sector and total retail. As part of our quality assurance approach, residual seasonality checks are completed regularly by our time series analysis team on both the directly seasonally adjusted series and the indirectly derived aggregate time series. Based on current data, we find no residual seasonality in the main aggregate for monthly retail sales estimates.

Accredited official statistics

These [accredited official statistics](#) were independently reviewed by the Office for Statistics Regulation in March 2015. They comply with the standards of trustworthiness, quality and value in the [Code of Practice for Statistics](#) and should be labelled "accredited official statistics".

Estimates in this table have been produced by combining a breakdown of commodity sales from 54 large retailers with total sales from other retailers.

The monthly periods consist of 4 weeks except for March, June, September and December which are 5 weeks. January 2025 is also a 5 week period.

The quarterly indices are the weighted averages of the monthly indices for the months within the quarter, the weights being the number of weeks in each monthly period.

¹ The Food, drink and tobacco category, Household goods category and Other non-food category include revisions to the commodity classifications provided by respondents.

In July 2018, we increased our sample for the commodity breakdown from 31 to 54 retailers to improve coverage and better represent the commodities sold. Growth rates may not be comparable as a result. This does not impact the main retail sales data.
