Statistical bulletin

Index of Production, UK: June 2026

Movements in the volume of production for UK production industries: manufacturing, mining and quarrying, energy supply, and water and waste management.

Contact:
Short Term Outputs for Production and Services (STOPS) team
indexofproduction@ons.gov.uk

Release date:
13 August 2026

Next release:
11 September 2026

Table of contents

1 . Main points

- Production output was estimated to have no growth (0.0%) during Quarter 2 (Apr to June) 2026, compared with Quarter 1 (Jan to Mar) 2026; this follows quarterly growth of 0.2% in Quarter 1 2026.
- Of the four main sectors, positive contributions came from “manufacturing” (up 1.0%) and “mining and quarrying” (up 0.2%), during Quarter 2 2026; this was offset by negative contributions from “electricity and gas” (down 2.3%) and “water supply and sewerage” (down 3.7%).
- 8 of the 13 subsectors in “manufacturing” increased during Quarter 2 2026, with the largest positive contributions coming from “basic pharmaceutical products” (up 4.2%) and “computer, electronic and optical products” (up 3.0%).
- Monthly production output was estimated to have decreased by 0.2% in June 2026; this follows a fall in May 2026 (down 0.7%) and a rise in April 2026 (up 0.4%).
- Monthly production in June 2026 saw falls from “manufacturing” (down 0.5%), “water supply and sewerage” (down 1.5%) and “electricity and gas” (down 0.3%); this was partially offset by a rise in “mining and quarrying” (up 5.1%), with “extraction of crude petroleum and natural gas” (up 6.2%) recovering from the large fall in May 2026 (down 5.5%).
- 7 of the 13 manufacturing subsectors saw decreased output in June 2026, with the largest negative contributions from “basic pharmaceutical products” (down 5.1%); this has fallen back after two consecutive growths in the quarter, April 2026 (up 4.3%) and May 2026 (up 0.2%).

2 . Data on the Index of Production

Index of Production time series
Dataset DIOP | Released 13 August 2026
Movements in the volume of production for the UK production industries: manufacturing, mining and quarrying, energy supply, and water and waste management. Figures are seasonally adjusted.

Output of the production industries
Dataset | Released 13 August 2026
Index values and growth rates for production, manufacturing, and the main industrial groupings in the UK.

Index of Production and industry sectors to four decimal places
Dataset | Released 13 August 2026
Monthly index values for production and the main Index of Production sectors in the UK to four decimal places.

Monthly Business Survey turnover in production industries
Dataset | Released 13 August 2026
Monthly Business Survey production industries' total turnover, domestic sales, and exports in the UK. Figures are in current price and are non-seasonally adjusted.

Export proportions for manufacturing industries
Dataset | Released 13 August 2026
Monthly, quarterly, and annual export data for the manufacturing industries, collected by the Monthly Business Survey at industry level in the UK.

All data related to the Index of Production (IoP) are available on our Related data page.

3 . Data sources and quality

The Index of Production (IoP) uses data from a variety of sources. It is calculated by taking turnover and removing the effect of price changes, or by using direct volume estimates.

Most of these data are collected as "turnover values" through the Monthly Business Survey (MBS). Direct volume series are also collected by the Department for Energy Security and Net Zero (DESNZ), and the International Steel Statistics Bureau (ISSB) for steel industries.

The MBS is fully online. Business owners can log in from any location and submit their data at an appropriate time.

Value Added Tax (VAT) data have also been included for 64 production industries for small and medium-sized businesses from January 2018. More information is available in our VAT turnover data in National Accounts: background and methodology.

A comprehensive list of the IoP source data can be found in our Gross domestic product (GDP) data sources catalogue.

Response rates for June 2026

MBS response rates were 74.9% for June 2026, based on forms returned. This accounted for 88.1% of total turnover coverage of the sample population. For further information, see our Monthly Business Survey (production) response rates dataset.

Quality and methodology

The data reported in IoP bulletins and datasets are estimates that are subject to uncertainty, such as sampling variability and non-sampling error. More information is available in Section 2 of our Uncertainty and how we measure it for our surveys methodology.

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in our Index of Production, UK quality and methodology information (QMI).

Accredited official statistics

These accredited official statistics were independently reviewed by the Office for Statistics Regulation in April 2014. They comply with the standards of trustworthiness, quality, and value in the Code of Practice for Statistics, and should be labelled "accredited official statistics".

Revisions to Index of Production

This release gives data for June 2026 for the first time. We are open to revisions for April 2026 and May 2026. Please see our National Accounts Revisions Policy: updated January 2026 for further details.

Table 1 shows the revisions from the current release against the previous IoP release (May 2026) published on 16 July 2026.

Table 1: Revisions to month-on-month growth for IoP and its sectors
Percentage growth, UK, April 2026 to May 2026

Date	IoP	Section B - Mining and Quarrying	Section C - Manufacturing	Section D - Electricity and Gas	Section E - Water Supply and Sewerage
Apr 2026	0.2	-0.1	0.0	1.4	-0.3
May 2026	-0.2	-0.5	-0.3	1.2	-0.7

Changes to datasets

We would like to notify users that there will be some changes to the structure of our published datasets from September 2026.

As a result of improvements in the upcoming Blue Book 2026, we will merge the industries of mining of coal and lignite (Standard Industrial Classification SIC industry 05) with the extraction of crude petroleum and natural gas extraction (SIC industry 06) in our Index of Production time series dataset.

We will also no longer publish the chained volume measures for the manufacture of vegetable and animal oils and fats (SIC industry 10.4). This will still form part of the aggregate series for the manufacture of food products (SIC industry 10) and higher aggregates. Current prices will continue to be published in our quarterly Index of Production time series dataset.

These changes will be implemented in the Quarterly national accounts release on 30 September 2026 and the subsequent Index of Production release on 15 October 2026. Further information on these changes will be published in an upcoming article, Blue Book 2026: industry impact analysis.

Seasonal adjustment

The monthly estimates of IoP are seasonally adjusted. Seasonal adjustment is the process of removing the variations associated with the time of year, or the arrangement of the calendar, from a data time series.

IoP estimates, as for many data time series, are difficult to analyse using raw data because seasonal effects dominate short-term movements. Identifying and removing the seasonal component leaves the trend and irregular components.

We use the X-13-ARIMA-SEATS approach to seasonal adjustment. Seasonal adjustment parameters are monitored closely and are regularly reviewed. For more information, please see our Seasonal adjustment methodology.

In our IoP estimates, seasonal adjustment is applied at the industry level. The seasonally adjusted series are aggregated to create estimates by sector and total IoP output. As part of our quality assurance approach, residual seasonality checks are regularly completed by our time series analysis team on both the directly seasonally adjusted series and the indirectly derived aggregate time series.

Based on our quality assurance as part of this publication, there is no statistically significant residual seasonality in our aggregate estimates for IoP in the period from January 1997 to June 2026.

This topic is explored further in our How the ONS assesses statistical outputs for residual seasonality methodology, published on 12 May 2026.

Since May 2026, we have published non-seasonally adjusted chained volume measure time series in our updated Monthly GDP low level industry dataset. There are conceptual differences between indirect and direct seasonal adjustment. Indirect seasonal adjustment is the sum of the directly seasonally adjusted component series, typically chosen at an optimal level and depending on user needs. For the national accounts, GDP aggregates are created with indirect seasonal adjustment. Because of processing, including benchmarking and chain-linking, direct seasonal adjustment of the non-seasonally adjusted GDP aggregate will not give the same results as the indirect seasonally adjusted output.
