Release date:
13 August 2026

Next release:
11 September 2026

Table of contents

1. [Main points](#)
2. [Data on Index of Services](#)
3. [Data sources and quality](#)
4. [Related links](#)
5. [Cite this statistical bulletin](#)

1 . Main points

- Services output for Quarter 2 (Apr to June) 2026 was estimated to have increased by 0.5%, compared with Quarter 1 (Jan to Mar) 2026; this follows 0.8% growth in Quarter 1 2026.
- In Quarter 2 2026, 10 of the 14 sectors saw a rise, with the main positive contributing sectors being "information and communication" (up by 2.7%), and "professional, scientific and technical activities" (up by 1.7%).
- In Quarter 2 2026, 2 of the 14 sectors saw a fall; these falls were in "administrative and support service activities" (down by 0.9%) and "education" (down by 0.4%); two sectors saw no growth (0.0%).
- Monthly services output was estimated to have increased by 0.4% in June 2026; this follows an increase in May 2026 (up by 0.1%) and a fall in April 2026 (down by 0.1%).
- There were monthly increases in 8 of the 14 sectors in June 2026; the largest positive contributions on the month came from "professional, scientific and technical activities" (up by 1.0%) and "administrative and support service activities" (up by 1.8%).
- There was a monthly decrease in 1 of the 14 sectors in June 2026 with "activities of households as employers" (down by 0.3%) providing the only negative growth; five sectors saw no growth (0.0%).

2 . Data on Index of Services

[Index of Services time series](#)

Dataset | Dataset ID: IOS1 | Released 13 August 2026

Monthly movements in output for the services industries: distribution, hotels and restaurants; transport, storage and communication; business services and finance; and government and other services.

[Monthly Business Survey turnover of services industries](#)

Dataset | Released 13 August 2026

Monthly Business Survey services industries' total turnover in current price and non-seasonally adjusted, UK.

[Index of Services, main components and sectors to four decimal places](#)

Dataset | Released 13 August 2026

Monthly historical movements in output for services and their industry components, by chained volume indices of gross value added, UK.

[Index of Services revisions triangles](#)

Dataset | Released 13 August 2026

Monthly chained volume indices in gross value added for services and its main components.

All data related to the Index of Services are available on our [Related data page](#).

3 . Data sources and quality

Response rates for June 2026

The response rates for June 2026 were 71.5%, based on forms returned. This accounted for 87.2% of total turnover coverage of the sample population. More information is available in our [Current and historical Monthly Business Survey \(MBS\) \(services\) response rates dataset](#).

Data sources and collection

The Index of Services (IoS) is compiled using data from several different sources (share of overall economy based on latest gross value added (GVA) weights).

These include the:

- Office for National Statistics (ONS) MBS (34.9%)
- ONS Retail Sales Inquiry (4.8%)
- ONS Government Expenditure (15.3%)
- ONS Households' Expenditure (11.2%)
- ONS Finance Expenditure (8.0%)
- ONS Households and non-profit institutions serving households (1.9%)
- Other (3.6%)

The MBS data are published alongside this release in our [MBS turnover of services industries dataset](#).

More information on what is included within "other" is available in our [Gross domestic product \(GDP\(o\)\) data sources catalogue](#).

The percentage of each data source is based on their GVA weight.

Our [IoS methods and sources pages](#) provide more information on the data that underpin these statistics; of particular note is our GDP(o) data sources catalogue.

Value Added Tax (VAT) data are also included for small- and medium-sized businesses to help inform estimates. More information is available in our [VAT turnover data in National Accounts: background and methodology](#).

Quality and methodology

The data reported in IoS bulletins and datasets are estimates that are subject to uncertainty, for example, sampling variability and non-sampling error. More information on these is available in Section 2 of our [Uncertainty and how we measure it for our surveys methodology](#).

More quality and methodology information (QMI) on strengths, limitations, appropriate uses, and how the data were created is available in our [Index of Services Quality and Methodology Information](#).

Accredited official statistics

These [accredited official statistics were independently reviewed by the Office for Statistics Regulation in May 2014](#). They comply with the standards of trustworthiness, quality and value in the [Code of Practice for Statistics](#) and should be labelled "accredited official statistics".

Revisions to Index of Services

This release gives data for June 2026 for the first time. We are open to revisions for April 2026 and May 2026. More details are available in our [National Accounts Revisions Policy: updated January 2026](#).

Table 1 shows the revisions from the current release against the previous IoS release (May 2026) published on 16 July 2026.

Table 1: Revisions to month-on-month growth for IoS and its sectors
Percentage growth, April 2026 to May 2026, UK

	Apr 2026 May 2026	
IoS	0.0	-0.2
Sections G and I – Distribution, Hotels and Restaurants	0.0	-0.1
Sections H and J – Transport, Storage and Communications	-0.1	-0.2
Sections K to N – Business Services and Finances	0.0	-0.1
Sections O to T – Government and other services	-0.1	-0.2

Seasonal adjustment

The monthly estimates of IoS are seasonally adjusted. Seasonal adjustment is the process of removing the variations associated with the time of year, or the arrangement of the calendar, from a data time series.

IoS estimates, as for many data time series, are difficult to analyse using raw data because seasonal effects dominate short-term movements. Identifying and removing the seasonal component leaves the trend and irregular components.

We use the X-13-ARIMA-SEATS approach to seasonal adjustment. Seasonal adjustment parameters are monitored closely and regularly reviewed. More information is available in our [seasonal adjustment methodology](#).

In our IoS estimates, seasonal adjustment is applied at the industry level and the seasonally adjusted series are aggregated to create estimates by sector and total IoS output. As part of our quality assurance approach, [residual seasonality checks](#) are regularly completed by our time series analysis team on both the directly seasonally adjusted series and also the indirectly derived aggregate time series.

Based on our quality assurance as part of this publication, there is no statistically significant residual seasonality in our aggregate estimates for IoS in the period from January 1997 to June 2026.

This topic is explored further in our [article on assessing residual seasonality](#), published on 12 May 2026.

Since June 2026, we have published non-seasonally adjusted chained volume measure series in our updated [Monthly GDP low level industry dataset](#). There are conceptual differences between indirect and direct seasonal adjustment. Indirect seasonal adjustment is the sum of the directly seasonally adjusted component series, typically chosen at an optimal level and depending on user needs.

For the National Accounts, GDP aggregates are created with indirect seasonal adjustment. Because of processing, including benchmarking and chain-linking, direct seasonal adjustment of the non-seasonally adjusted GDP aggregate will not give the same results as the indirect seasonally adjusted output.
