Next release:  
19 June 2020

## Correction

### 22 May 2020 08:21

In Section 6: Borrowing in April 2020 when describing the increase in central government current expenditure April 2020 an incorrect percentage growth rate was stated. We stated that central government current expenditure increased by 38.3% in April 2020 when compared with April 2019. The 38.3% quoted was the change in cash terms, and not a percentage change. The correct growth rate is a 53.9% increase in central government current expenditure between April 2019 and April 2020.

# 1 . The effects of the coronavirus pandemic

The coronavirus (COVID-19) pandemic is expected to have a significant impact on the UK public sector finances. These effects will arise from both the introduction of public health measures and from new government policies to support businesses and individuals.

This release presents the second provisional estimates of UK public sector finances for the latest full financial year (April 2019 to March 2020) and the first estimate of April 2020. These are initial estimates and the extent of the COVID-19 impact is uncertain.

The full effects of COVID-19 on the public finances will become clearer in the coming months. This means that some of the statistics included in this release, particularly those for April 2020, will be prone to larger revisions than normal, once more data become available.

Section 3 of this release outlines the challenges of measuring the effects of COVID-19 on the public finances, particularly those we face in capturing the impact on tax receipts recorded on a national accounts (or accrued) basis.

Given the uncertainty of data underpinning our borrowing measure, we place greater emphasis than usual on our leading cash measure – the central government net cash requirement (CGNCR) – in this release. This measure will be affected by changes in the timing of tax payments by individuals and businesses but does not depend on forecast tax receipts in the same way as our national accounts-based (accrued) figures. It contains the timeliest information and is less susceptible to revision.

Our article [Recent and upcoming changes to public sector finance statistics: April 2020](#) explains our provisional assessments of some of the largest COVID-19 schemes.

## 2 . Main points

- The effects of the coronavirus (COVID-19) pandemic are not fully captured in this release, meaning that estimates of national accounts-based (accrued) tax receipts, borrowing and gross domestic product (GDP) in particular are subject to greater than usual uncertainty.
- Central government net cash requirement (central government net cash requirement excluding UK Asset Resolution Ltd, Network Rail and the COVID Corporate Finance Facility) in April 2020 was £63.5 billion, £73.3 billion more than in April 2019; the highest cash requirement in any month on record (records began in April 1984).
- Central government net cash requirement in the latest full financial year was £56.5 billion, £19.6 billion more than in the previous financial year; the highest cash requirement in any financial year since the financial year ending March 2017.
- Borrowing (public sector net borrowing excluding public sector banks, PSNB ex) in April 2020 is estimated to have been £62.1 billion, £51.1 billion more than in April 2019; the highest borrowing in any month on record (records began in January 1993).
- Borrowing in March 2020 was revised up by £11.7 billion to £14.7 billion, largely due to a reduction in the previous estimate of tax receipts and National Insurance contributions and the recording of expenditure associated with the Coronavirus Job Retention scheme.
- Borrowing in the latest full financial year (April 2019 to March 2020) is estimated to have been £62.7 billion, £22.5 billion more than in the previous financial year; these are not final figures and will be revised over the coming months as we replace our initial estimates with provisional and then final outturn data, and as more information on the effects of the COVID-19 pandemic becomes available.
- Debt (public sector net debt excluding public sector banks, PSND ex) at the end of April 2020 was £1,887.6 billion (or 97.7% of GDP), an increase of £118.4 billion (or 17.4 percentage points) compared with April 2019; the largest year-on-year increase in debt as a percentage of GDP on record (monthly records began in March 1993).

### **3 . Challenges of measuring the effects of the coronavirus pandemic on the public finances**

The [UK government](#) and the [Bank of England](#) have announced policies and schemes to support the economy and individuals affected by the coronavirus (COVID-19) pandemic.

The full impact of the COVID-19 pandemic on the public finances will not be immediately apparent and initial estimates will be revised as improved data become available. It is important to note the following.

- The effects of COVID-19 are not fully captured in this release, which contains the second provisional estimates of public sector finances data for the financial year ending March 2020 and the first estimates for April 2020.
- The scale of future revisions will probably be larger than normal as more information about the effects of COVID-19 becomes available.
- This month HM Revenue and Customs (HMRC) have replaced tax forecast data which previously aligned to information published in the Office for Budget Responsibility's (OBR) [Supplementary forecast published on 13 March 2020](#) with data published in their [Coronavirus Reference Scenario](#) published 14 May 2020. These data do not represent official forecasts but are the latest published estimates made by OBR of the impact of the Coronavirus on the public sector finances; these data impact on our national accounts-based (accrued) estimates of tax receipts and are likely to be refined by OBR over the coming months.
- We have updated our presentation of borrowing to reflect the provisional treatment of the Coronavirus Job Retention Scheme (CJRS) for the first time; CJRS substantially increased central government expenditure in both March and April 2020 and so increases our headline public sector net borrowing measures, this provisional treatment of CJRS may be revised once official statistical guidance has been published.
- We have updated our presentation of debt to reflect the provisional treatment of the COVID Corporate Finance Facility Fund (CCFF) for the first time, CCFF has no impact on the headline public sector net debt measures; this provisional treatment of CCFF may be revised once official statistical guidance has been published.
- The estimates of GDP used to present borrowing and debt as a percentage of GDP have been updated to reflect the first estimates of the COVID-19 period, including official estimates for the first quarter of 2020 published by the Office for National Statistics (ONS) and future estimates of GDP published in OBR's [Coronavirus Reference Scenario](#) published 14 May 2020. These estimates are subject to more uncertainty than usual and are likely to be subject to revision in future months.
- Central government net cash requirement, a measure of the difference between cash spending and receipts, is unlikely to be revised substantially in subsequent releases.

Here we begin to describe the impact of COVID-19 on the public finances and the implications on the data presented in this release. As a part of our article [Recent and upcoming changes to public sector finance statistics](#), we provide our initial assessment of the main COVID-19 support schemes announced to date.

## **The possible impact of coronavirus on our publishing timetable**

The COVID-19 pandemic presents a significant challenge. We are working hard to ensure the UK government has the vital information needed to respond to the impact of this pandemic on our economy and society. But, inevitably, the disruption caused by the pandemic means we may need a little extra time to quality assure some of our data before publication.

We will review our publication dates and announce any future short delays in due course. We have released a [public statement on COVID-19 and the production of statistics](#).

## **Tax receipts**

To estimate borrowing, tax receipts are recorded on a national accounts (accrued) basis rather than on a cash receipt basis. In other words, we attempt to record receipts at the point where the liability arose, rather than when the tax is actually paid.

This has a particular impact where individuals or businesses make tax payments in arrears – at the end of a financial year, for example. In this case, on a cash receipts basis, receipts will appear to be zero for the first 11 months of the year in this case, with a single large payment in the final period. On a national accounts (accrued receipts) basis, the same amount is spread over all the months of the financial year as small payments – reflecting the period during which the liability arose.

This process means that national accounts (or accrued) based tax receipts for the current period depend on information from both current cash payments and on projections of future tax receipts, which are "accrued" (or time adjusted) back to the current month. For this purpose, we use official forecasts of future cash receipts, produced by the Office for Budget Responsibility (OBR).

The latest official forecasts, published on 13 March 2020 were made before the full effects of the COVID-19 pandemic were apparent. It is widely recognised that these forecasts were likely to overstate future revenues. In turn, this made future downward revisions to revenues and upward revisions to borrowing more likely.

This month HMRC have updated the projections of future tax receipts used in our accrued estimates based on those in the OBR's [Coronavirus Reference Scenario published on 14 May 2020](#). These data do not represent official forecasts but are the latest published estimates made by OBR of the impact of COVID-19 on future tax receipts. The reference scenario assumes a three-month lockdown period followed by a gradual return to normal over the subsequent three months. It also suggests a significant reduction in future revenues compared with the earlier, official forecast.

Basing forecasts on this scenario is a key improvement to the tax receipts recorded on a national accounts-basis (accrued), though they are still highly provisional. The OBR will continue to monitor developments over the coming months and update their estimates as the impact of COVID-19 becomes clearer.

The Office for National Statistics (ONS) and HM Treasury have been working with both HM Revenue and Customs (HMRC) and the OBR to determine whether there is enough information to make exceptional adjustments that estimate COVID-19 effects.

Where data are available, we have adjusted the recording of national accounts-based (accrued) tax receipts for April and earlier periods. These adjustments are described later in this section. These exceptional adjustments, and their underlying assumptions, will be revisited over the coming months as more information becomes available.

## **Pay as you earn**

Pay as you earn (PAYE) Income Tax is normally recorded on a national accounts (accrued) basis by time-adjusting cash receipts using a one-month lag, which means that, for example, accrued PAYE receipts for April are based on forecast May cash receipts.

The amount of cash received for PAYE Income Tax in April 2020 was lower than usual, with much of that weakness likely attributable to lower earnings/employment and non-payment of liabilities. April 2020 receipts recorded on a national accounts (accrued) basis are estimated based on the OBR [Coronavirus Reference Scenario published 14 May 2020](#).

We currently assume that non-paid tax from April 2020 will still be paid, but in a later period than originally expected. Therefore, we have made an exceptional adjustment to increase PAYE cash tax receipts recorded in April to anticipate these future cash receipts for the purpose of calculating March 2020 on a national accounts (accrued) basis.

## Value Added Tax

Value Added Tax (VAT) data for any month are normally recorded on a national accounts (accrued) basis by time-adjusting the average cash receipts expected in the following three months. This means that, for example, VAT receipts on a national accounts (accrued) basis in April depend on forecast cash receipts for May, June and July.

The government announced a [deferral scheme for Value Added Tax](#) payments, enabling UK businesses to pay VAT due between 20 March 2020 and 30 June 2020 at a later date (though before 31 March 2021). As a result, cash VAT receipts are lower than usual in April 2020.

Our current assumption is that all the deferred tax owed will still be paid, but in a later period than originally expected, as is permitted under the deferral scheme. This means that we have not made any adjustments to VAT receipts recorded on a national accounts (accrued) basis in April, and this is still calculated as the average for May, June and July, where these three months are based on OBR's [Coronavirus Reference Scenario published 14 May 2020](#).

There are not enough data available yet on which to estimate the amount of VAT that will not be paid because of lower economic activity or businesses ceasing to trade. We have, however, made an exceptional adjustment to prevent the effects of the deferral scheme on VAT receipts from impacting accrued receipts in the December to March period.

## Corporation Tax

Corporation Tax data for any month are normally recorded on a national accounts (accrued) basis by time-adjusting cash receipts for the subsequent 2 to 21 months, depending on the profits of the company.

As with PAYE and VAT, estimates of future months' cash receipts are now based OBR's [Coronavirus Reference Scenario published 14 May 2020](#).

We are not yet able to estimate the amount of Corporation Tax that will not be paid, for example, because of reduced trading activity leading to lower profits, firms deferring tax payments to a future date or firms going out of business altogether. The OBR Coronavirus Reference Scenario assumes a non-payment rate of 10% and therefore this is our current assumption.

## Other taxes

The update of HMRC's tax forecast based on OBR's [Coronavirus Reference Scenario published 14 May 2020](#) has led to improvements in the recording of many taxes recorded on a national accounts (accrued) basis. However, limited information has meant that those taxes not collected by HMRC (such as business rates) are currently likely to be overestimated. Such taxes will be reviewed over the coming months when more information becomes available.

## Expenditure

As is usual at this stage, expenditure data for the full financial year ending March 2020 are still provisional and will be revised when outturn data are available, which could be later than usual this year.

Expenditure data for April 2020 are initial estimates, which will be updated over time. This is true of expenditure estimates at this point in all financial years, but estimates this year may be subject to even more uncertainty given the COVID-19 impacts. Sizeable revisions to these data may be expected in later months.

This month we have recorded the spending for the CJRS for the first time, based on estimates from OBR's [Coronavirus Reference Scenario published 14 May 2020](#). Section 5 discusses the impact of CJRS-related expenditure on borrowing in both March and April 2020.

## The debt impact of Coronavirus

This month, the impact of the Bank of England's (BoE) [recently announced financial interventions](#) in response to COVID-19 is becoming apparent. In addition to the COVID Corporate Finance Facility Fund (CCFF) discussed in the next section, we discuss the expansion of the Bank of England Asset Purchase Facility Fund and Term Funding Scheme in section 8.

## COVID Corporate Finance Facility Fund

This month we have recorded the CCFF for the first time. The CCFF is a scheme under which the BoE, acting for HM Treasury, will buy commercial paper issued by larger, non-financial corporations, in order to help with their cash flow position.

Our recording of CCFF is provisional and based on the information currently available. We assume that the £15.9 billion of commercial paper is purchased in April 2020 was at nominal value and as a result, there is no change to the liquid assets held by central government when cash is exchanged for this commercial paper.

In April 2020, the provisional treatment of CCFF means that total central government gross debt increased by £16.7 billion, reflecting the loan liability to the BoE. However, since BoE owns the counterpart loan asset there is an equal and offsetting impact at a public sector level, meaning that there is no net impact on public sector net debt.

We will continue to assess this provisional treatment of CCFF and other lead COVID-19 schemes to fully reflect them in the Public sector finances as soon as possible.

## Gross domestic product (GDP) impact

[Estimates of gross domestic product \(GDP\) used to present debt and other headline measures](#) are partly based on official forecast data. This month the estimates of GDP used to present these ratios have been updated.

We have updated our previous estimate of GDP in the first quarter of 2020 (January to March 2020) with the first published estimate [GDP first quarterly estimate, UK: January to March 2020](#). It is likely that these provisional estimates of GDP will be revised in future months. Estimates of GDP for the subsequent three quarters are now based on expectations published in the OBR's [Coronavirus Reference Scenario published 14 May 2020](#). These data do not represent official forecasts but are the latest published estimates made by OBR of the impact of COVID-19 on future GDP.

On 6 May 2020, we published [Coronavirus and the effects on UK GDP](#), which explains how the global COVID-19 pandemic and the wider containment efforts are expected to impact on UK gross domestic product (GDP) as well as some of the challenges that National Statistical Institutes are currently facing.

## 4 . Central government net cash requirement

Given the uncertainty around our national accounts-based (accrued) measures, this month we place a greater emphasis than usual on our leading cash measure, the central government net cash requirement (excluding both UK Asset Resolution Ltd and Network Rail).

The central government net cash requirement (CGNCR) is the amount of cash needed immediately for the UK government to meet its obligations. To obtain cash, the UK government sells financial instruments, gilts or Treasury Bills.

The amount of cash required will be affected by changes in the timing of tax payments by individuals and businesses but does not depend on forecast tax receipts in the same way as our national accounts-based (accrued) measures.

The CGNCR contains the timeliest information and is less susceptible to revision. However, as for any cash measure, the CGNCR does not reflect the overall amount for which government is liable or the point at which any liability is incurred – it only reflects when cash is received and spent.

Table 1 demonstrates how central government's net cash requirement is calculated from its cash receipts and cash outlays. This presentation focuses on the central government's own account and excludes cash payments to both local government and public non-financial corporations.

Notably, in April 2020 VAT cash receipts were negative at minus £0.9 billion, because VAT repayments, being made as normal, exceeded VAT payments.

Businesses can generally reclaim the VAT paid on goods and services purchased for use in their business. Where a business charges its customers less VAT than they paid on their purchases, HM Revenue and Customs (HMRC) repays the difference to the business.

Also, the government announced a [deferral scheme for Value Added Tax](#) payments, enabling UK businesses to pay VAT due between 20 March 2020 and 30 June 2020 at a later date (though before 31 March 2021). With some payments being deferred and repayments being made, overall cash VAT receipts are lower than usual in April 2020.

On the same day as we release the public sector finances, HMRC publish a [Summary of HM Revenue and Customs tax receipts, National Insurance contributions \(NICs\), tax credit expenditure and Child Benefit for the UK](#) containing a detailed list of cash receipts.

## 5 . Borrowing

The coronavirus (COVID-19) pandemic has had an unprecedented impact on borrowing, with the £62.1 billion borrowed in April 2020 being the highest in any month on record (records began January 1993).

Last month we explained the uncertainty around our provisional estimate of borrowing in March 2020. This month we have increased that estimate by £11.7 billion to £14.7 billion, largely due to reductions in the previous estimate of taxes and the additional expenditure associated with the Coronavirus Job Retention scheme.

In their [Coronavirus Reference Scenario published 14 May 2020](#), the Office for Budget Responsibility (OBR) estimate that borrowing in the current financial (April 2020 to March 2021) will be £298.4 billion, around five times the amount borrowed in the latest full financial year (April 2019 to March 2020) and almost twice as much that borrowed in the financial year ending March 2010, at the peak of the financial crisis.

**Figure 1: The Office for Budget Responsibility Coronavirus reference scenario<sup>1</sup> estimate borrowing to increase to £298.4 billion for the financial year ending March 2021**

Notes:

1. OBR Coronavirus reference scenario originally published 14 April 2020. This chart uses the updated fiscal data published 14 May 2020.
2. The Office for Budget Responsibility (OBR) full financial year forecast of PSNB ex for the FYE March 2021, taken from the March 2020 Supplementary (13 March 2020).

## 6 . Borrowing in April 2020

In April 2020, the public sector spent more money than it received in taxes and other income. Over this period, the public sector borrowed £62.1 billion, £51.1 billion more than it borrowed in April 2019. This unprecedented increase in borrowing reflects the emerging effects of the government's coronavirus (COVID-19) measures.

In their [Coronavirus Reference Scenario published 14 May 2020](#), the Office for Budget Responsibility (OBR) estimate that borrowing in April 2020 would be £66.6 billion, £4.5 billion more than our initial estimate.

The difference between central government's income and spending makes the largest contribution to the amount borrowed by the public sector.

In April 2020, central government borrowed £66.2 billion, while local government was in surplus by £7.3 billion. This local government surplus partially reflects the increase in current transfers from central government to fund its COVID-19 measures.

The data for the latest month of every release contain some forecast data. The initial outturn estimates for the early months of the financial year, particularly April, contain more forecast data than other months, as profiles of tax receipts, along with departmental and local government spending are still provisional. This means that the data for these months are typically more prone to revision than other months and can be subject to sizeable revisions in later months.

Figure 2 summarises how each of the five sub-sectors (central government, local government, non-financial public corporations, public sector pensions and the Bank of England (BoE)) contribute to the overall growth in monthly borrowing in April 2020 and compares this with the equivalent measures in the same month a year earlier (April 2019).

**Figure 2: How each sector contributes to the growth in monthly borrowing**

## Central government receipts

In April 2020, central government receipts fell by £16.4 billion compared with April 2019 to £45.6 billion, including £29.6 billion in tax revenue.

These figures are always subject to some uncertainty, as many tax measures such as Value Added Tax (VAT), Corporation Tax and Pay As You Earn (PAYE) income tax contain some forecast cash receipts data and are liable to revision when actual cash receipts data are received. These forecasts are currently based on OBR's [Coronavirus Reference Scenario published 14 May 2020](#).

## Newly recorded central government revenue

In April 2020, the government introduced a [digital services tax](#) that applies to businesses providing a social media service, search engine or an online marketplace available to UK users.

In April 2020, central government received £29.0 million in digital services tax revenue.

Though the Digital Services Tax applies from April 2020, receipts are recorded on a national accounts (accrued) basis from January 2020 not April 2020. This arises from our method of time-adjusting cash receipts and it occurs because many businesses use a calendar year accounting period.

## Bank of England Asset Purchase Facility Fund

In April 2020, there was a £4.0 billion dividend transfer from the Bank of England Asset Purchase Facility Fund (BEAPFF) to HM Treasury.

As with other such transfers, central government net borrowing will be reduced by an amount equivalent to the transfer, while the net borrowing of Bank of England will be increased by an equal and offsetting amount, with no impact at a public sector borrowing level.

## Central government expenditure

In April 2020, central government spent £109.3 billion, an increase of 53.9% on April 2019. Of this amount, around three quarters was spent by central government on providing services and grants (for example, related to education, defence, and health and social care), with the remainder was spent on social benefits (such as pensions, unemployment payments, Child Benefit and Statutory Maternity Pay), capital investment and interest on the government's outstanding debt.

### Subsidies paid by central government

This month we have recorded the expenditure associated with the Coronavirus Job Retention Scheme (CJRS) for the first time. CJRS is a temporary scheme designed to help employers pay wages and salaries to those employees who would otherwise be made redundant.

While there remains international debate about the appropriate treatment of similar schemes in other countries, our provisional assessment is that these payments are subsidies on production by central government to the employers.

In April 2020, central government subsidy expenditure was £16.3 billion, of which £14.0 billion were CJRS payments. Additionally, the subsidies paid by central government in March 2020 have been increased by £7.0 billion to reflect the additional CJRS payments not previously recorded.

Estimates of accrued CJRS payments are currently based on OBR's [Coronavirus Reference Scenario published 14 May 2020](#).

### Departmental expenditure on goods and services

Departmental expenditure on goods and services in April 2020 increased by £7.1 billion compared with April 2019, including a £1.2 billion increase in expenditure on staff costs and a £5.7 billion increase in the purchase of goods and services. This increase in pay and procurement partially reflects expenditure by the Department of Health and Social Care to respond to the COVID-19 pandemic.

### Current transfers from central to local government

Central government grants to local authorities in April 2020 increased by £14.2 billion compared with April 2019, mainly to fund additional support because of the COVID-19 pandemic.

While transfers from central government to local government increase central government's borrowing, it reduces local government's borrowing by an equal and offsetting amount and so has no direct borrowing impact at a public sector level.

### Interest payments on the government's outstanding debt

Interest payments on the government's outstanding debt in April 2020 were £5.0 billion, a £1.2 billion decrease compared with April 2019. Changes in debt interest are largely a result of movements in the Retail Prices Index (RPI) to which index-linked bonds are pegged.

## Local government and public corporations data

Both the local government and public corporations data for April 2020 are initial estimates, largely based on OBR's [Coronavirus Reference Scenario published 14 May 2020](#). We have reflected our estimation of impact of COVID-19 in these data.

Current and capital transfers between these sectors and central government are based on administrative data supplied by HM Treasury.

## 7 . Borrowing in the financial year ending March 2020

This month we publish the second provisional estimate of borrowing for the full financial year ending March 2020.

Between April 2019 and March 2020, the public sector borrowed a total of £62.7 billion, £22.5 billion (or 56.1%) more than in the same period the previous financial year.

These are not final figures and will be revised over the coming months as we replace our initial estimates with provisional and then final outturn data, and as more information on the effects of the coronavirus (COVID-19) pandemic becomes available.

Since our first estimate of borrowing for the full financial year ending March 2020 (published 23 April 2020), we have revised borrowing up by £14.0 billion, largely due to reductions in the previous estimate of taxes and the additional expenditure associated with the Coronavirus Job Retention scheme in March 2020.

Figure 3 summarises how each of the five sub-sectors (central government, local government, non-financial public corporations, public sector pensions and the Bank of England (BoE)) contribute to the overall growth in monthly public sector net borrowing excluding public sector banks (PSNB ex) in the latest full financial year and compares this with the equivalent measures in the financial year ending March 2019.

**Figure 3: How each sector contributes to the growth in borrowing**

Public sector net borrowing by sub-sector, UK, latest full financial year (April 2019 to March 2020) compared with the financial year ending March 2019

Borrowing has generally been falling since its peak in the financial year ending March 2010. However, borrowing in the latest full financial year (April 2019 to March 2020) was £62.7 billion, £22.5 billion more than in the previous financial year, largely due to the impact of the COVID-19 pandemic in March.

**Figure 4: Borrowing in the latest financial year was around one-third (30.7%) of the amount borrowed in the financial year ending March 2010**

Public sector net borrowing excluding public sector banks, UK, April 1993 to April 2020

Source: Office for National Statistics – Public Sector Finances

**Notes:**

2. Financial year 2019 to 2020 represents the FYE 2020 (April 2019 to March 2020).
3. Financial year-to-date represents April.
4. OBR Coronavirus reference scenario originally published 14 April 2020. This chart uses the updated fiscal data published 14 May 2020.

## 8 . Debt

At the end of April 2020, the amount of money owed by the public sector to the private sector was approximately £1.9 trillion (or £1,887.6 billion), which equates to 97.7% of gross domestic product (GDP).

In April 2020, the Debt Management Office (DMO) issued £51.7 billion in gilts at nominal value, raising £58.5 billion in cash. This represents an unprecedented increase in gilts issuance (at nominal value) compared with March 2020.

Further, on 23 April 2020, the DMO published [April 2020: Revision to the DMO's 2020-21 Financing Remit for May to July 2020](#) (PDF, 264KB), in which it announced that it will raise £180 billion during the May to July 2020 (inclusive) period, exclusively through issuance of conventional and index-linked gilts.

When the government borrows, this normally adds to the total debt, but it is important to remember that [reducing the deficit is not the same as reducing the debt](#).

## **The Bank of England's contribution to debt**

The Bank of England's contribution to debt is largely a result of its quantitative easing activities via the Bank of England Asset Purchase Facility Fund and Term Funding Schemes.

If we were to remove these temporary effects, debt at the end of April 2020 would reduce by £184.5 billion (or 9.6% percentage points of GDP) to £1,703.1 billion (or 88.1% of GDP).

### **Bank of England Asset Purchase Facility Fund**

In March 2020, the [Bank of England announced the expansion of its Asset Purchase Facility Fund \(APF\)](#) to £200 billion in total, made up of £190 billion in gilts and £10 billion in corporate bonds.

At the end of April 2020, the gilt holdings of the APF have increased by £43.7 billion (at nominal value) compared with the end of March 2020, to £428.5 billion in total. This increase is of a similar order of magnitude to the new issuance by the DMO in April 2020 of around £51.7 billion (at nominal value), which means that gilt holdings by units other than the APF have changed to a much smaller degree than the level of issuance in April.

As a result of these gilt holdings, the impact of the APF on public sector net debt stands at £85.8 billion, the difference between the nominal value of its gilt holdings and the market value it paid at the time of purchase. Note that the final debt impact of the APF depends on the disposal of the gilts at the end of the scheme.

### **Term Funding Scheme and Term Funding Scheme incentives for Small and Medium-sized Enterprises**

In March 2020, the Bank of England announced the expansion of its Term Funding Scheme with the introduction of Term Funding Scheme incentives for Small and Medium-sized Enterprises (TFS SME).

In April 2020, £8.2 billion of loans were made under the TFS SME scheme, bringing the total stock of loans under the TFS umbrella to £115.4 billion and so adding an equivalent amount to public sector net debt.

**Figure 5: Debt as a percentage of gross domestic product (GDP) has been falling in recent financial years; however the measures introduced to address the COVID-19 pandemic have increased this ratio considerably**

Public sector net debt excluding public sector banks, UK, March 1994 to the end of April 2020

Source: Office for National Statistics – Public Sector Finances

Notes:

1. Includes Asset Purchase Facility (APF), which includes the Term Funding Scheme (TFS) and TFS incentives for small and medium-sized enterprises (TFS SME).
2. Public sector net debt excluding public sector banks (PSND ex) is the combination of PSND ex Bank of England (BoE) plus the BoE's contribution to PSND ex.
3. Public sector net debt excluding public sector banks (PSND ex) shown at the end of each financial year (March), unless otherwise stated.

Unusually, this month our published table [REC3: Reconciliation of Central Government Net Cash Requirement and Changes in Net Debt](#), has a £10.9 billion in "other" category in April 2020. We will investigate this figure with a view to re-allocating it in the May 2020 presentation.

## 9 . Revisions

Table 2 shows the revisions to the headline statistics presented in this bulletin compared with those presented in the [previous bulletin](#) (published on 23 April 2020), while Figure 6 shows how each element of the public sector contributes to the revision in the latest full financial year net borrowing (public sector banks net borrowing excluding public sector banks, PSNB ex).

The data for the latest months of every release contain a degree of forecasts; subsequently these are replaced by improved forecasts as further data are available and finally outturn. The revisions presented in this section are largely the result of new tax data received from our data suppliers and the inclusion of the estimated expenditure associated with the Coronavirus Job Retention Scheme (CJRS) for the first time.

We have updated the estimates of gross domestic product (GDP) used to present a number of our measures, notably public sector net debt, as a percentage of GDP with the latest Office for National Statistics (ONS) figures (published 13 May 2020) and the estimates in OBR's [Coronavirus Reference Scenario published on 14 May 2020](#).

## Central government receipts

Tax receipts and National Insurance Contributions for the financial year ending March 2020 have been reduced by £6.6 billion and £2.0 billion respectively, compared with those published in our previous bulletin (published 23 April 2020). Of this £8.6 billion downward revision, £4.5 billion related to March 2020 alone, with the remaining portion spread across the other 11 months of the financial year.

To estimate borrowing, tax receipts are recorded on a national accounts (accrued) rather than on a cash receipt basis. In other words, we attempt to record receipts at the point where the liability arose, rather than when the tax is actually paid. This process means many receipts are provisional for the latest period(s) as they depend on both actual cash payments and on projections of future tax receipts based on official forecasts, which are "accrued" (or time adjusted) back to the current month(s).

The observed revisions reflect the uncertainty of the impact of coronavirus (COVID-19) on future cash tax receipts and further revisions are likely.

The update of HMRC's tax forecast based on the Office for Budget Responsibility's (OBR) [Coronavirus Reference Scenario published 14 May 2020](#) has led to improvements in the recording of many taxes recorded on a national accounts (accrued) basis. These data do not represent official forecasts but are best estimates made by OBR of the impact of COVID-19. The exceptional adjustments described in Section 3 remain in place for March 2020 and for earlier periods where relevant. These will be revisited when more information becomes available.

Due to the extended accruals period required to estimate Corporation Tax on a national accounts basis, these updated forecasts have also reduced expected Corporation Tax revenue by £0.8 billion in the financial year ending March 2019 which still relies on a portion of forecast cash receipts.

## Central government expenditure

This month we have included the estimated expenditure associated with the Coronavirus Job Retention Scheme (CJRS) for the first time. Pending published statistical guidance, we have recorded CJRS payments as subsidies paid by central government. The subsidies paid by central government in March 2020 have therefore been increased by £7.0 billion to reflect the additional CJRS payments not previously recorded.

## Local government borrowing

We have increased our previous estimate (published 23 April 2020) of local government borrowing in the financial year ending March 2020 by £0.6 billion due to a reduction in the estimate of grants received from central government. These payments net out at a public sector level and so have no impact on public sector borrowing.

## **Revisions to the net cash requirement and net debt of public sector banks**

Estimates of the net cash requirement and net debt of public sector banks are derived from the balance sheet of these organisations, supplied to us by the Bank of England twice annually.

This month we have received the balance sheet data covering the period July to December 2019 for the first time, enabling us to update previous estimates associated with public sector banks. Further, our own estimates covering the period January 2020 to date have been updated to reflect this new information.

As a consequence of receiving these data, our previous estimate of the impact of the public sector banks on net debt at the end of March 2020 has increased by £2.5 billion, while their net cash requirement over the financial year ending March 2020 has reduced by £1.4 billion.

## 10 . Public sector finances data

### [Public sector finances borrowing by sub-sector](#)

Dataset | Released 22 May 2020

An extended breakdown of public sector borrowing in a matrix format and estimates of total managed expenditure (TME).

### [Public sector finances tables 1 to 10: Appendix A](#)

Dataset | Released 22 May 2020

The data underlying the public sector finances statistical bulletin are presented in the tables PSA 1 to 10.

### [Public sector finances revisions analysis on main fiscal aggregates: Appendix C](#)

Dataset | Released 22 May 2020

Revisions analysis for central government receipts, expenditure, net borrowing and net cash requirement statistics for the UK over the last five years.

### [Public sector current receipts: Appendix D](#)

Dataset | Released 22 May 2020

A breakdown of UK public sector income by latest month, financial year-to-date and full financial year, with comparisons with the same period in the previous financial year.

### [Impact of student loans, public sector-funded pension scheme changes and capital consumption changes introduced in September 2019: Appendix G](#)

Dataset | Released 22 May 2020

Latest estimates of public sector net borrowing (PSNB) (and further into current budget deficit and net investment spending), net debt and net financial liabilities, with the impacts of changes to the accounting for student loans, public sector pensions and capital consumption introduced in September 2019.

[All datasets related to this publication](#) are available on our website.

## 11 . Glossary

### The public sector

In the UK, the public sector consists of six sub-sectors: central government, local government, public non-financial corporations, public sector pensions, the Bank of England (BoE) and public financial corporations (or public sector banks).

### Public sector current budget deficit

Public sector current budget is the difference between revenue (mainly from taxes) and current expenditure, on an accrued basis; it is the gap between current expenditure and current receipts (having taken account of depreciation). The current budget is in surplus when receipts are greater than expenditure.

### Public sector net investment

Net investment refers to the balance of acquisition less disposals of capital assets and liabilities.

## Public sector net borrowing

Public sector net borrowing excluding public sector banks (PSNB ex) measures the gap between revenue raised (current receipts) and total spending (current expenditure plus net investment (capital spending less capital receipts)). Public sector net borrowing (PSNB) is often referred to by commentators as "the deficit".

## Public sector net cash requirement

The public sector net cash requirement (PSNCR) represents the cash needed to be raised from the financial markets over a period of time to finance the government's activities. This can be close to the deficit for the same period; however, there are some transactions, for example, loans to the private sector, that need to be financed but do not contribute to the deficit. It is also close but not identical to the changes in the level of net debt between two points in time.

## Public sector net debt

Public sector net debt excluding public sector banks (PSND ex) represents the amount of money the public sector owes to private sector organisations including overseas institutions, largely as a result of issuing gilts and Treasury Bills, minus the amount of cash and other short-term assets it holds. Public sector net debt (PSND) is often referred to by commentators as "the national debt".

## Debt interest to revenue ratio

The debt interest to revenue ratio (DIR) represents the proportion of net interest paid (gross interest paid less interest received) by the public sector (excluding public sector banks), compared with the non-interest receipts it receives in a given period.

Other important terms commonly used to describe public sector finances are listed in the [Public sector finances glossary](#).

## 12 . Measuring the data

The [Monthly statistics on the public sector finances: a methodological guide](#) provides comprehensive contextual and methodological information concerning the monthly public sector finances statistical bulletin. The guide sets out the conceptual and fiscal policy context for the bulletin, identifies the main fiscal measures, and explains how these are derived and interrelated. Additionally, it details the data sources used to compile the monthly estimates of the fiscal position.

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in [the Public sector finances QMI](#).

## Departure from the EU

As the UK leaves the European Union (EU), it is important that our statistics continue to be of high quality and are internationally comparable. During the transition period, those UK statistics that align with EU practice and rules will continue to do so in the same way as before 31 January 2020.

These statistics, and our sector classification process, draw on the [European System of Accounts \(ESA\) 2010](#), the [Manual on Government Deficit and Debt](#), and associated guides.

After the transition period, we will continue to produce our public sector finance statistics in line with the UK Statistics Authority's [Code of Practice for Statistics](#) and in accordance with internationally agreed statistical guidance and standards.

To ensure comparability with other countries, the statistical aggregates within the Public sector finances release will continue to be produced according to the existing definitions and standards until further notice or those standards are updated.

## Comparisons with official forecasts

The independent Office for Budget Responsibility (OBR) is responsible for the production of official forecasts for government. These forecasts are usually produced twice a year, in spring and autumn.

The most recent official forecasts, presented in the OBR's [Supplementary forecast \(13 March 2020\)](#) were made before the full effects of the Coronavirus (COVID-19) pandemic were apparent. It was widely recognised that these forecasts are likely to overstate future revenues. In turn, this made future downward revisions to revenues and upward revisions to borrowing more likely.

This month we have updated our presentations based on OBR's [Coronavirus Reference Scenario published 14 May 2020](#). The reference scenario assumes a three-month lockdown period followed by a gradual return to normal over the subsequent three months. These data do not represent official forecasts but are the latest published estimates made by OBR of the impact of COVID-19 on future tax receipts.

Table 3 presents the headline public sector finance fiscal aggregates published in both OBR's Supplementary forecast (13 March 2020) and [Coronavirus Reference Scenario published 14 May 2020](#).

Table 3: How the latest outturn public sector figures compare with official OBR forecasts for the financial year ending March 2020, UK

£ billion, unless otherwise stated (not seasonally adjusted)

	Current budget deficit	Net investment	Net borrowing	Net debt <sup>1</sup>	Net debt % of GDP
Outturn 2019/20	13.6	49.1	62.7	1,804.0	93.3
OBR forecast 2019/20 <sup>2</sup>	-1.7	49.1	47.4	1,798.9	79.5
Difference	15.3	0.0	15.3	5.1	13.8
OBR forecast 2020/21 <sup>2</sup>	-4.9	59.7	54.8	1,818.3	77.4
OBR scenario 2020/21 <sup>3</sup>	-	-	298.4	2,230.3	95.8
Outturn April 2020	54.7	7.4	62.1	1,887.6	97.7
OBR scenario April 2020 <sup>3</sup>	-	-	66.6	1,864.8	96.1
Difference	-	-	-4.5	22.8	1.6

## 13 . Strengths and limitations

### National Statistics status for public sector finances

On 20 June 2017, the UK Statistics Authority [published a letter](#) confirming the designation of the monthly Public sector finances bulletin as a [National Statistic](#). This letter completes the 2015 assessment of [public sector finances](#).

### Local government

Local government data for the financial year ending (FYE) March 2020 are mainly based on budget data for England, Wales and Scotland, and estimates for Northern Ireland.

In recent years, planned expenditure initially reported in local authority budgets has been systematically higher than the final outturn expenditure reported in the audited accounts. We therefore include adjustments to reduce the amounts reported at the budget stage.

For the FYE March 2020, we include a £2.0 billion downward adjustment to England's current expenditure on goods and services, along with £0.7 billion and £0.2 billion adjustments to Scotland's and Wales' capital expenditure respectively. We apply a further £2.5 billion downward adjustment to current expenditure on benefits in the FYE March 2020, to reflect the most recently available data for housing benefits. Further information on these and additional adjustments can be found in the [Public sector finances QMI](#).

Local government data for the FYE March 2021 are initial estimates, based on the Office for Budget Responsibility (OBR) forecasts. We have reflected our estimation of impact of coronavirus (COVID-19) in these data.

Current and capital transfers between local and central government are based on administrative data supplied by HM Treasury.

## **Non-financial public corporations**

Public corporations data for the FYE March 2021 are initial estimates, based on the Office for Budget Responsibility (OBR) forecasts. Current and capital transfers between public corporations and central government are based on administrative data supplied by HM Treasury.

## **Public sector funded pensions**

Pensions data for the FYE March 2020 are our estimates based on the latest available data. Some of these estimates rely on actuarial modelling; this is a complex process that most public sector schemes conduct every three to four years. Until such valuations become available, we forecast the change in pension liability using our knowledge of the economic climate. [Pensions in the public sector finances: a methodological guide](#) outlines both the theory and practice behind our calculation of pension scheme estimates.

## **Public sector banks**

Unless otherwise stated, the figures quoted in this bulletin exclude public sector banks (that is, currently only Royal Bank of Scotland(RBS)). The reported position of debt, and to a lesser extent borrowing, would be distorted by the inclusion of RBS's balance sheet (and transactions). This is because the government does not need to borrow to fund the debt of RBS, nor would surpluses achieved by RBS be passed on to the government, other than through any dividends paid as a result of the government equity holdings.

1 Unless otherwise stated.

2 Current Budget Deficit is the difference between current expenditure and current receipts.

3 Net Investment is investment less depreciation.

4 Net Borrowing is Current Budget Deficit less Net Investment.

5 APF - Bank of England Asset Purchase Facility.

6 SLS - Special liquidity Scheme.

7 Nominal GDP in the 12 months ending at each month.

8 Nominal GDP in the 12 months centred at each month.

9 Change measured in percentage points.

10 Funded pensions only.

Relationship between columns: 1=2+4+7 ; 11=2+3+6+9+10 ; 13=11+12

1 Previously known as the borrowing requirement of the sector concerned

2 BoE includes Bank of England Asset Purchase Facility Fund and Special Liquidity Scheme

Figures derived from Bank of England accounts and ONS estimates

Figures for most recent months are ONS estimates

3 Excluding public sector banks

4 NCR = Net Cash Requirement

5 Funded public sector pensions only

6 Public Sector

7 Central Government

General Government NCR (series RUUI) =1+5

Relationships between columns 1+3+4+5=6 ; 2+3+4+5=7 ; 7+8+9=6

1 NRAM = Northern Rock Asset Management, B&B = Bradford and Bingley, CCF<sup>1</sup> = Covid Corporate Financing Facility

2 NCR = Net Cash Requirement

3 Does not include Net Cash Requirement to Central Government

4 Negative NCR reflects change in financing as from 2014/15 new financing requirements of Network Rail were met through core central government borrowing and are therefore included in main CGNCR.

# PSA7D Central Government Net Cash Requirement on own account (receipts and outlays on a cash basis)

Relationships between columns 1+6+7=8; 9+10+11=12; 12-8=13

1 Comprises payments into the Consolidated Fund and all payovers of NICs excluding those for Northern Ireland.

2 Income tax includes capital gains tax and is gross of any tax credits treated by HM Revenue and Customs (HMRC) as tax deductions.

3 UK receipts net of personal pension rebates; gross of Statutory Maternity Pay and Statutory Sick Pay.

4 Payments into Consolidated Fund.

5 Including some elements of expenditure not separately identified.

6 Mainly comprises privatisation proceeds.

7 Net of certain receipts, and excluding on-lending to local authorities and public corporations.

8 A much more detailed breakdown of tax receipts is available from HMRC at [www.gov.uk/government/organisations/hm-revenue-customs](http://www.gov.uk/government/organisations/hm-revenue-customs)

9 NCR = Net Cash Requirement. Without Northern Rock Asset Management & Bradford and Bingley.

10 Gross of tax credits. Includes diverted profit tax.

# REC3 Reconciliation of Central Government Net Cash Requirement and Changes in Net Debt

Relationship between columns 14=1+2+3+4+5+6+7+8+9+10+11+12

1 Excluding Northern Rock Asset Management (NRAM), Bradford & Bingley (B&B) and Network Rail (NR) - although cash flows relating to NRAM and B&B are included from October 2014 and for NR from April 2015

2 All adjustments reflect differences between when, and at what value, liabilities and assets are scored in net debt and their related cash flows

3 Includes gilts that are transferred to central government (such as those previously held by the Royal Mail Pension Plan) as well as timing differences where cash flows and debt movements were recorded in adjacent months

4 Includes the impact of imputed finance leases as well as the reclassifications of London Continental Railway and the reorganisation of the Housing Revenue Account

1 Interest flows are HM Treasury estimates based on publicly available data

2 Up to the 19th January 2019, Term Funding Scheme was recorded within the Asset Purchase Facility. From 19th January, TFS was transferred to the Bank of England balance sheet

3 APF has also held and could in future hold assets other than gilts

4 TFS SME is the Term Funding Scheme with additional incentives for small and medium-sized enterprises which started 15th April 2020.
