1 . Main points

- Public sector net borrowing (excluding public sector banks) decreased by £6.6 billion to £50.0 billion in the current financial year-to-date (April 2017 to December 2017), compared with the same period in 2016; this is the lowest year-to-date net borrowing since 2007.
- The Office for Budget Responsibility (OBR) forecasts that public sector net borrowing (excluding public sector banks) will be £49.9 billion during the financial year ending March 2018, an increase of £3.9 billion on the outturn net borrowing in the financial year ending March 2017.
- Public sector net borrowing (excluding public sector banks) decreased by £2.5 billion to £2.6 billion in December 2017, compared with December 2016 helped in part by a £1.2 billion credit from the European Union; this is the lowest December net borrowing since 2000.
- Public sector net debt (excluding public sector banks) was £1,759.5 billion at the end of December 2017, equivalent to 85.4% of gross domestic product (GDP), an increase of £62.3 billion (or 0.7 percentage points as a ratio of GDP) on December 2016.
- Public sector net debt (excluding both public sector banks and Bank of England) was £1,591.4 billion at the end of December 2017, equivalent to 77.2% of GDP, a decrease of £26.8 billion (or 3.6 percentage points as a ratio of GDP) on December 2016.
- Central government net cash requirement decreased by £31.1 billion to £49.4 billion in the current financial year-to-date (April 2017 to December 2017), compared with the same period in 2016; this is the lowest year-to-date central government net cash requirement since 2007.

2 . In summary

Public sector net borrowing (excluding public sector banks) is currently tracking below that of the last financial year. In December 2017, the gap in financial year-to-date borrowing has widened by £3.5 billion to £6.6 billion, helped in part by a credit of £1.2 billion from the European Union.

However, in their [latest set of official forecasts](#), Office for Budget Responsibility states that it expects receipts growth to slow in the latter half of the current financial year which, if it happened, would exert an upward pressure on borrowing.

3 . What's changed in this release?

This section presents information on aspects of data or methodology that is important to understand when reading this bulletin. Where appropriate, further details of individual changes are discussed in the “Quality and methodology” section of this bulletin.

UK VAT, GNI and abatement contribution to the European Union budget

In December 2017, the UK's net contribution to the European Union (EU) was £1.2 billion lower than in December 2016.

December can see atypical payments between member states and the EU. December 2017 saw a credit to the UK of £1.2 billion following the adoption of agreed amendments to the 2017 EU budget which reduced the size of the 2017 budget and adjusted member states' contributions to reflect updated economic forecasts. Both of these changes were anticipated by the OBR in their November 2017 forecast.

4 . Recent events that may impact on public sector finances

This section acknowledges recent government announcements that may have future implication on public sector finances.

Carillion declares insolvency

Following the announcement of the insolvency of Carillion PLC, [the government](#) has stated that it will provide the necessary funding required by the Official Receiver to maintain public services. Any impact of these financial interventions on public sector finances will be announced in due course.

Carillion held approximately 450 contracts with government, representing 38% of Carillion's 2016 reported revenue.

5 . Planned changes for the next release

This section outlines the methodology changes planned for introduction in the January 2018 bulletin (published 21 February 2018).

Value Added Tax on electronic services

On 1 January 2015, Value Added Tax (VAT) rules relating to the supply of telecommunications, radio and television broadcasting and electronically-supplied services changed.

Prior to 1 January 2015, supplies made by EU businesses to EU resident customers were subject to VAT in the country where the suppliers were established; from 1 January 2015, the supplies have been subject to VAT in the country where the customer is resident. The tax changes are as a result of European legislation.

The legislation provides for a transition period of four years, during which the tax authority in the country where the supplier is located can retain a part of the VAT collected prior to passing on the remainder of the collected tax to the country where the customer is resident. From 1 January 2019, all collected tax must be transferred to the tax authority in the appropriate country.

Currently, the VAT on electronic services collected for the UK is recorded net of retained amounts; however, to comply with international guidance these collection fees should not be recorded as tax but as current transfers between countries.

To comply with legislation, the accrued measure of VAT recorded in public sector finances will be increased by an amount equal to the VAT retained by other EU countries (as an administration fee). This increase in accrued VAT will be offset in central government expenditure as a current transfer.

The money that the UK retains will be recorded as a current transfer between countries (revenue) and as a result public sector net borrowing will be reduced by between £0.1 and £0.2 billion in each of the 3 financial years from that ending March 2016 to date.

The sale of the English student loan book

On 6 December 2017, the government issued a statement on the [sale of part of the pre-2012, English student loan book](#). This sale of government assets was completed in January 2018 and so will be recorded in the January 2018 public sector finances, which will be published in February 2018.

The proceeds from this sale will reduce the central government net cash requirement (CGNCR) and public sector net debt (PSND) by £1.7 billion (the cash raised from the sale) but have no impact on public sector net borrowing.

6 . Things you need to know about this release

What are the most important terms I need to know?

Public sector net borrowing excluding public sector banks (PSNB ex) measures the gap between revenue raised (current receipts) and total spending (current expenditure plus net investment (capital spending less capital receipts)). Public sector net borrowing is often referred to by commentators as “the deficit”.

The public sector net cash requirement (PSNCR) represents the cash needed to be raised from the financial markets over a period of time to finance the government's activities. This can be close to the deficit for the same period but there are some transactions, for example, loans to the private sector, which need to be financed but do not contribute to the deficit. It is also close but not identical to the changes in the level of net debt between two points in time.

Public sector net debt excluding public sector banks (PSND ex) represents the amount of money the public sector owes to private sector organisations including overseas institutions, largely as a result of issuing gilts and Treasury Bills, less the amount of cash and other short-term assets it holds.

While borrowing (or the deficit) represents the difference between total spending and receipts over a period of time, debt represents the total amount of money owed at a point in time.

The debt has been built up by successive government administrations over many years. When the government borrows (that is, runs a deficit), this normally adds to the debt total. So reducing the deficit is not the same as reducing the debt.

If you'd like to know more about the relationship between debt and deficit, please refer to our article [The debt and deficit of the UK public sector explained](#).

What does the public sector include?

In the UK, the public sector consists of five sub-sectors: central government, local government, public non-financial corporations, Bank of England and public financial corporations (or public sector banks).

Unless otherwise stated, the figures quoted in this bulletin exclude public sector banks (that is currently only Royal Bank of Scotland (RBS)), as the reported position of debt (and to a lesser extent borrowing) would be distorted by the inclusion of RBS's balance sheet (and transactions). This is because government does not need to borrow to fund the debt of RBS, nor would surpluses achieved by RBS be passed on to government, other than through any dividends paid as a result of government equity holdings.

The sub-sector breakdown of public sector net borrowing is summarised in Table PSA2 in the [Public sector finances Tables 1 to 10: Appendix A dataset](#).

Should I look at monthly or financial year-to-date data to understand public sector finances?

A financial year is an accounting period of 12 months running from 1 April one year to 31 March the following year. For example, the financial year ending March 2016 comprises the months from April 2015 to March 2016.

Due to the volatility of the monthly data, the cumulative financial year-to-date borrowing figures provide a better indication of the position of the public finances than the individual months.

Are our figures adjusted for inflation?

All monetary values in the public sector finances (PSF) bulletin are expressed in terms of "current prices, that is, they represent the price in the period to which the expenditure or revenue relates and are not adjusted for inflation.

In order to compare data over long time periods, to aid international comparisons and provide an indication of a country's ability to service borrowing and debt, commentators often discuss changes over time to fiscal aggregates in terms of gross domestic product (GDP) ratios. GDP represents the value of all the goods and services currently produced by the UK economy in a period of time.

The use of GDP in public sector fiscal ratio statistics

An article, [The use of GDP in public sector fiscal ratio statistics](#), explains that for debt figures reported in the monthly public sector finances, a 12-month GDP total centred on the month is employed, while in the [UK government debt and deficit statistical bulletin](#), the total GDP for the preceding 12 months is used.

As a consequence of using a centred GDP estimate, our estimates include a degree of official forecast data produced by the OBR and are subject to revision when OBR updates its estimates (usually in March and November each year).

Are our figures adjusted for seasonal patterns?

All monetary values in the public sector finances (PSF) bulletin are not seasonally adjusted. We recommend you use year-on-year comparisons (be it cumulative financial year-to-date or individual monthly borrowing figures) rather than making month-on-month comparisons.

Are our monthly figures likely to change over time?

Each PSF bulletin contains the first estimate of public sector borrowing for the most recent period and is likely to be revised in later months as more data become available.

In publishing monthly estimates, it is necessary to use a range of different types of data sources. Some of these are subject to revision as budget estimates (forecasts) are replaced by outturn data and these then feed into the published aggregates.

In addition to those that stem from updated data sources, revisions can also result from methodology changes. An example of the latter is the changes that were due to the introduction of improved methodology for the recording of Corporation Tax, Bank Corporation Tax Surcharge receipts and Bank Levy implemented in the PSF estimates released in February 2017.

7 . How much is the public sector borrowing?

In the current financial year-to-date (April 2017 to December 2017), the public sector spent more money than it received in taxes and other income. This meant it had to borrow £50.0 billion; that is, £6.6 billion less than in the same period in the previous financial year.

Of this £50.0 billion of public sector net borrowing excluding public sector banks (PSNB ex), £24.0 billion related to the cost of the “day-to-day” activities of the public sector (the current budget deficit), while £26.0 billion related to capital spending (or net investment) such as infrastructure.

Figure 1 presents both monthly and cumulative public sector net borrowing (excluding public sector banks) in the current financial year-to-date and compares these with the previous financial year.

Figure 1: Public sector net borrowing (excluding public sector banks) in the current financial year-to-date (April to December 2017) compared with the latest full financial year (April 2016 to March 2017), UK

Figure 1: Public sector net borrowing (excluding public sector banks) in the current financial year-to-date (April to December 2017) compared with the latest full financial year (April 2016 to March 2017), UK

Source: Office for National Statistics

The difference between central government's income and spending makes the largest contribution to the amount borrowed by the public sector. In the current financial year-to-date, of the £50.0 billion borrowed by the public sector, £48.5 billion was borrowed by central government.

In the current financial year-to-date, central government received £504.0 billion in income, including £376.8 billion in taxes. This was around 4% more than in the same period in the previous financial year.

Over the same period, central government spent £538.9 billion, around 3% more than in the same period in the previous financial year. Of this amount, just below two-thirds was spent by central government departments (such as health, education and defence), around one-third on social benefits (such as pensions, unemployment payments, Child Benefit and Maternity Pay), with the remaining being spent on capital investment and interest on government's outstanding debt.

Appendix D to this release contains a detailed breakdown of [public sector current receipts](#).

Figure 2 summarises public sector borrowing by sub-sector in the current financial year-to-date (April to December 2017) and compares these with the same period in the previous financial year.

This presentation splits PSNB ex into each of its four sub-sectors: central government, local government, public corporations and Bank of England.

A further breakdown (receipts, expenditure (both current and capital) and depreciation) is provided for central government, local government and public corporations, with central government current receipts and current expenditure being presented in further detail.

Figure 2: Contributions to public sector net borrowing (excluding public sector banks) by sub-sector in the current financial year-to-date (April to December 2017), UK

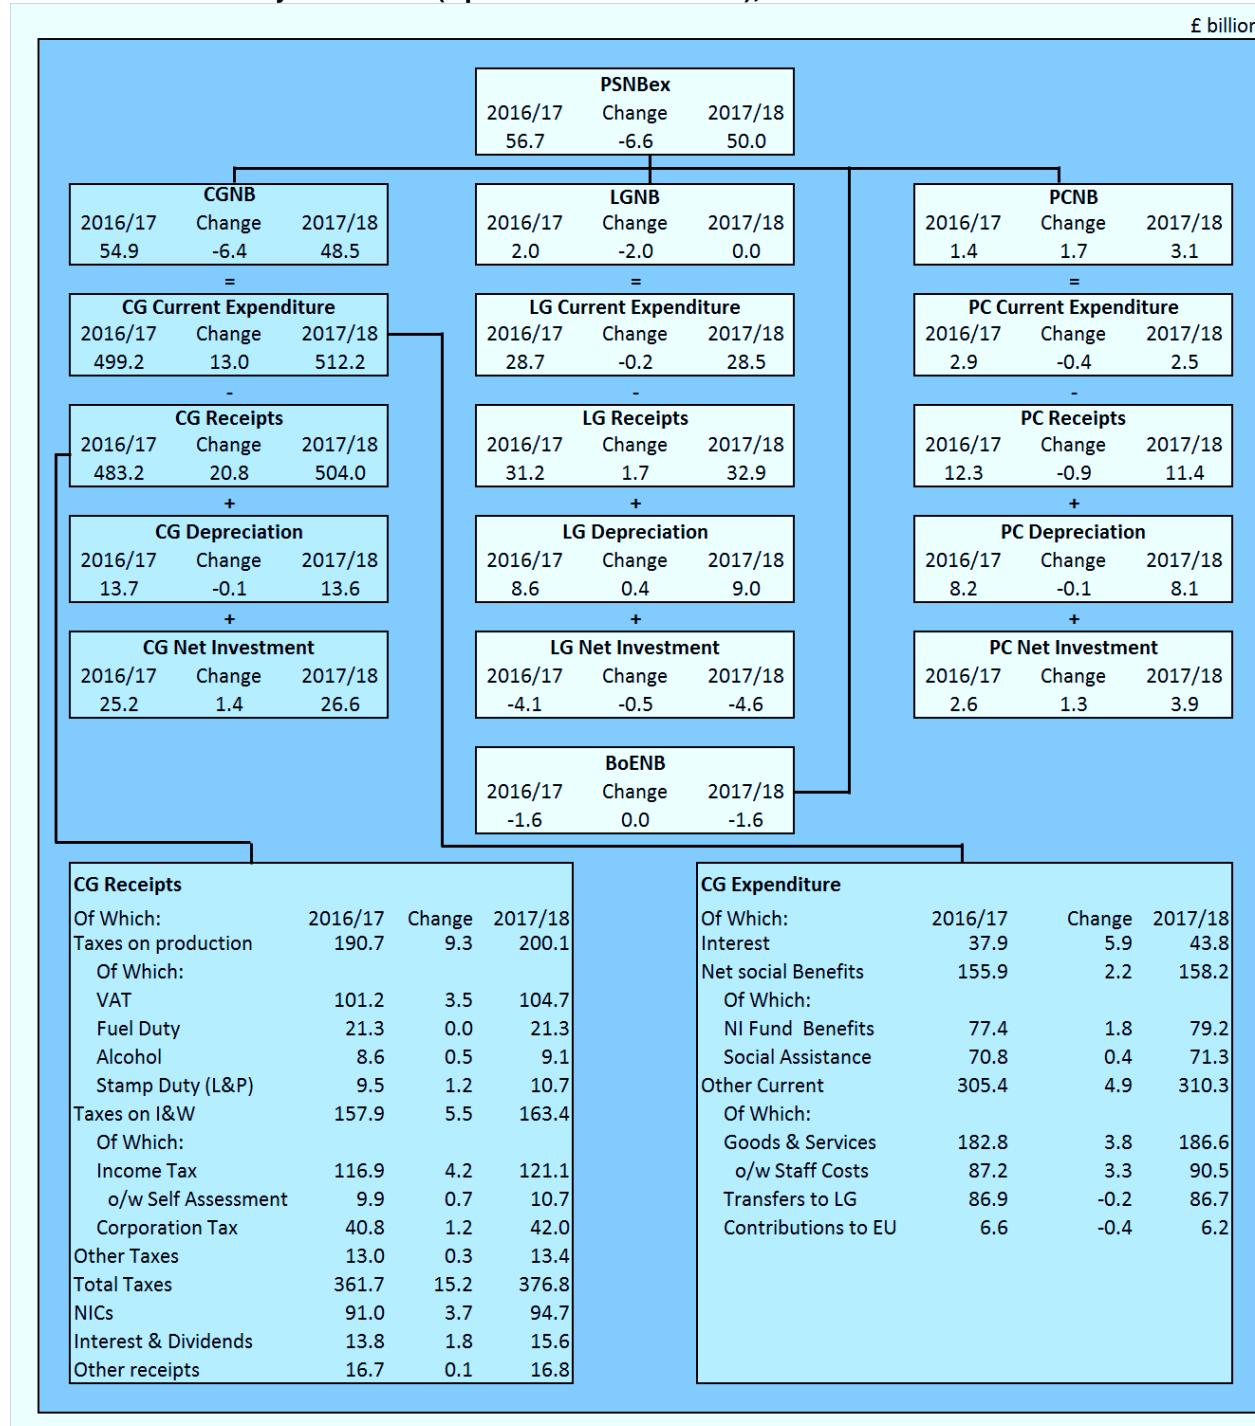

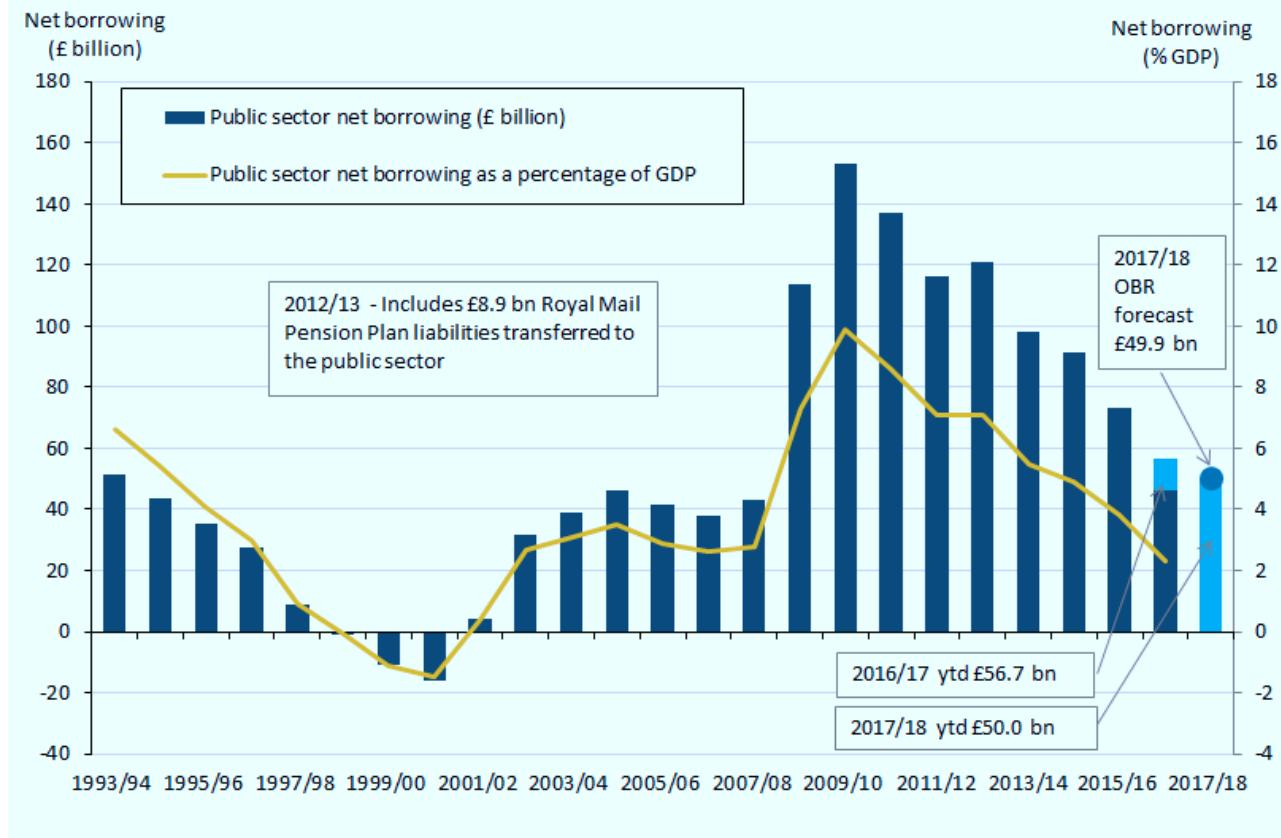

Figure 3 illustrates that annual borrowing has generally been falling since the peak in the financial year ending March 2010 (April 2009 to March 2010).

In the financial year ending March 2017 (April 2016 to March 2017), the public sector borrowed £46.0 billion, or 2.3% of gross domestic product (GDP). This was £27.1 billion lower than in the previous full financial year and around one-third of that borrowed in the financial year ending March 2010, when borrowing was £153.0 billion or 9.9% of GDP.

Figure 3: Public sector net borrowing (excluding public sector banks), April 1993 to December 2017, UK

Since the first estimate of public sector net borrowing (excluding public sector banks) for the financial year ending March 2017 (April 2016 to March 2017) was published on 25 April 2017, the estimate has been revised downwards by £6.0 billion, from £52.0 billion to £46.0 billion. However, these are not final figures and may be revised further over the coming months as we replace our provisional estimates with final outturn data.

Currently, for the financial year ending March 2017:

- central government net borrowing comprises largely audited account data
- local government data are mainly based on final outturn figures published by the Ministry of Housing, Communities and Local Government (MHCLG) and the devolved administrations
- public corporations' net borrowing is based on provisional returns from HM Treasury Whole of Government Accounts for financial year ending 2017, final outturn figures published by the MHCLG, published accounts for individual public corporations and OBR forecasts

The data for the latest month of every release contain some forecast data. The initial outturn estimates for the early months of the financial year, particularly April, contain more forecast data than other months, as profiles of tax receipts, along with departmental and local government spending are still provisional. This means that the data for these months are typically more prone to revision than other months and can be subject to sizeable revisions in later months.

[Appendix G](#) shows revisions to the first reported estimate of financial-year-end public sector net borrowing (excluding public sector banks) by sub-sector. It summarises revisions to the first estimate of public sector net borrowing (excluding public sector banks) by sub-sector for the last six financial years. Revisions are shown at 6 and 12 months after year-end.

We have published an article, [Public Sector Finances – Sources summary and their timing](#) (PDF, 23KB), which provides a brief summary of the different sources used and the implications of using those data in the monthly public sector finances (PSF) statistical bulletin.

Focusing on the current month

In December 2017, the public sector spent more money than it received in taxes and other income. This meant it had to borrow £2.6 billion; that is, £2.5 billion less borrowing than in December 2016.

Appendix D to this release contains a detailed breakdown of [public sector current receipts](#).

Figure 4 summarises public sector borrowing by sub-sector in December 2017 and compares this with the equivalent measures in the same month a year earlier (December 2016).

This presentation splits public sector net borrowing excluding public sector banks (PSNB ex) into each of its four sub-sectors: central government, local government, public corporations and Bank of England.

A further breakdown (receipts, current expenditure, capital expenditure and depreciation) is provided for central government, local government and public corporations. Central government current receipts and current expenditure are presented in further detail.

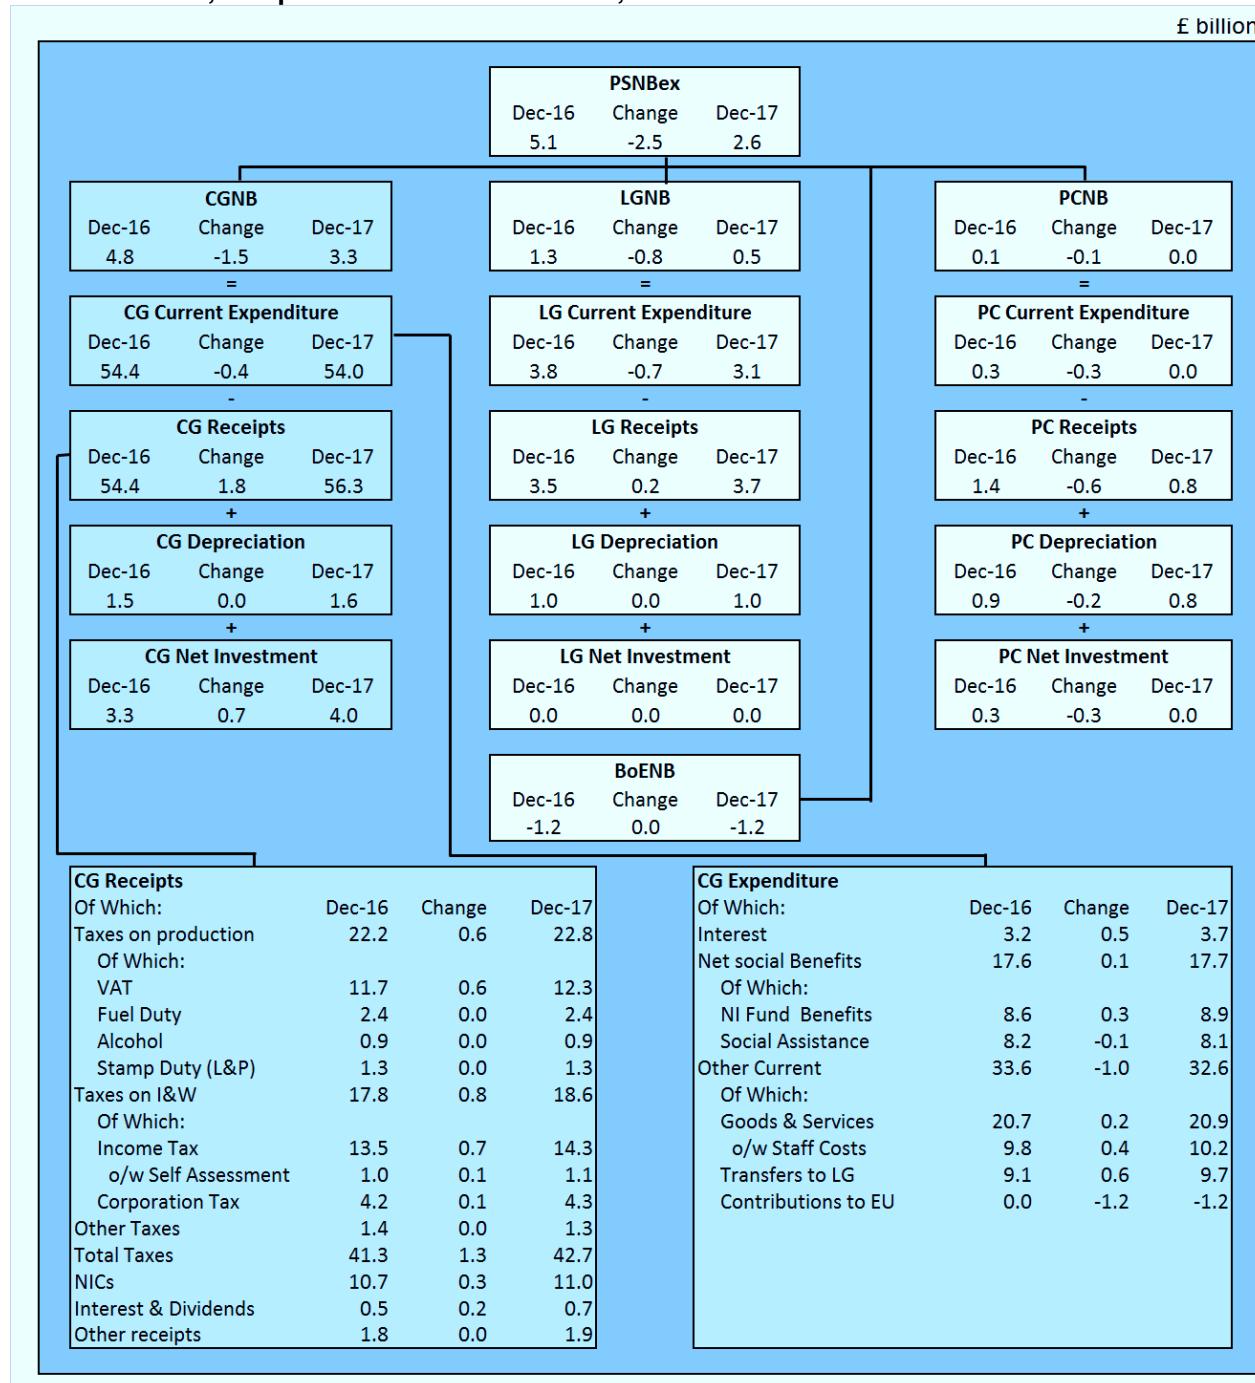

Both local government and public corporations data for December 2017 are provisional estimates.

While some components of local government net borrowing are still based on [Office for Budget Responsibility \(OBR\)](#) forecasts, principally these have now been replaced with budget data received from the MHCLG and the devolved administrations.

Components of public corporations' net borrowing remain calculated by Office for National Statistics (ONS) and are based on estimates for financial year ending March 2017 for the majority of public corporations, and a combination of quarterly survey returns and OBR forecasts for larger public corporations.

For both local government and public corporations, administrative source data are used for transfers to each of these sectors from central government.

Figure 4: Contributions to public sector net borrowing (excluding public sector banks) by sub-sector in December 2017, compared with December 2016, UK

8 . How big is public sector debt?

The amount of money owed by the public sector to the private sector stood at nearly £1.8 trillion at the end of December 2017, which equates to 85.4% of the value of all the goods and services currently produced by the UK economy in a year (or gross domestic product (GDP)).

This £1.8 trillion (or £1,759.5 billion) debt at the end of December 2017 represents an increase of £62.3 billion since the end of December 2016.

Following passage of the Regulation of Social Housing (Influence of Local Authorities) (England) Regulations 2017, we have concluded that [housing associations \(HAs\) in England are now private market producers](#) and as such they have been reclassified to the private non-financial corporations sub-sector for the purpose of national accounts and other economic statistics. This reclassification took effect from 16 November 2017, the date the regulations came into force. Prior to this date they remained classified as public non-financial corporations. As of the end of October 2017, English HAs' net debt amounted to £65.5 billion, which from November 2017 is no longer to be counted as public sector debt.

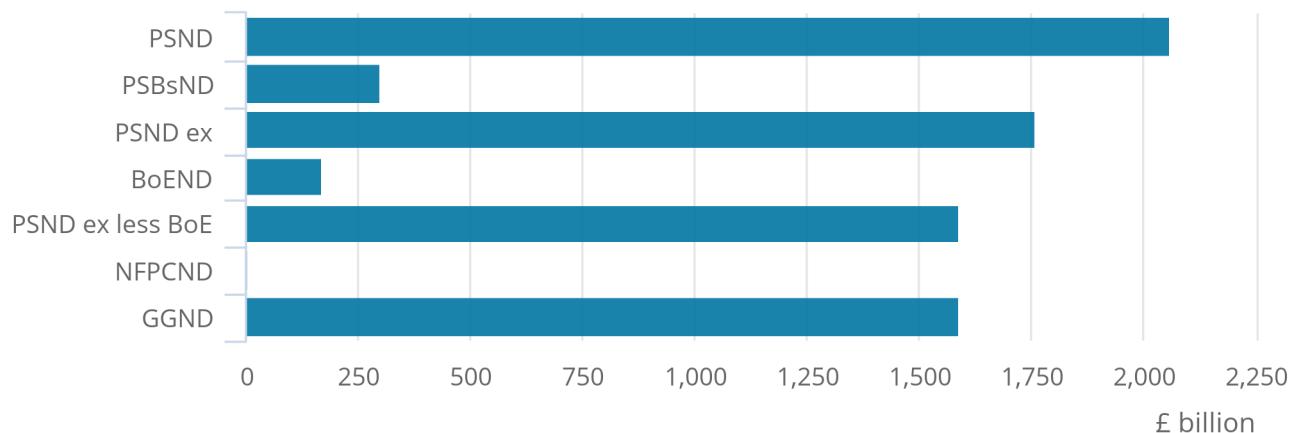

Since December 2016, the debt associated with Bank of England increased by £89.2 billion to £168.1 billion. Nearly all of this growth is due to the activities of the Asset Purchase Facility, including £82.2 billion from the Term Funding Scheme (TFS).

If we were to exclude the activities of the Bank of England in the estimation of public sector net debt (excluding public sector banks), then public sector net debt (excluding both public sector banks and Bank of England) would reduce by £168.1 billion, from £1,759.5 billion to £1,591.4 billion, or from 85.4% of GDP to 77.2%.

Figure 5 breaks down outstanding public sector net debt at the end of December 2017 into the sub-sectors of the public sector. In addition to public sector net debt excluding public sector banks (PSND ex), this presentation includes the effect of public sector banks on debt.

Figure 5: Contributions to public sector net debt by sub-sector at the end of December 2017, UK

Figure 5: Contributions to public sector net debt by sub-sector
at the end of December 2017, UK

Source: Office for National Statistics

Notes:

1. PSND - Public sector net debt.
2. PSBsND - Public sector Banks net debt.
3. PSNDex - Public sector net debt excluding public sector banks.
4. BoEND - Bank of England's contribution to net debt.
5. PSND ex Boe - Public sector net debt excluding both public sector banks and Bank of England.
6. NFPCND - Non-financial public corporations' net debt.
7. GGND - General government net debt.

Net debt is defined as total gross financial liabilities less liquid financial assets, where liquid assets are cash and short-term assets, which can be released for cash at short notice without significant loss. These liquid assets comprise mainly foreign exchange reserves and bank deposits.

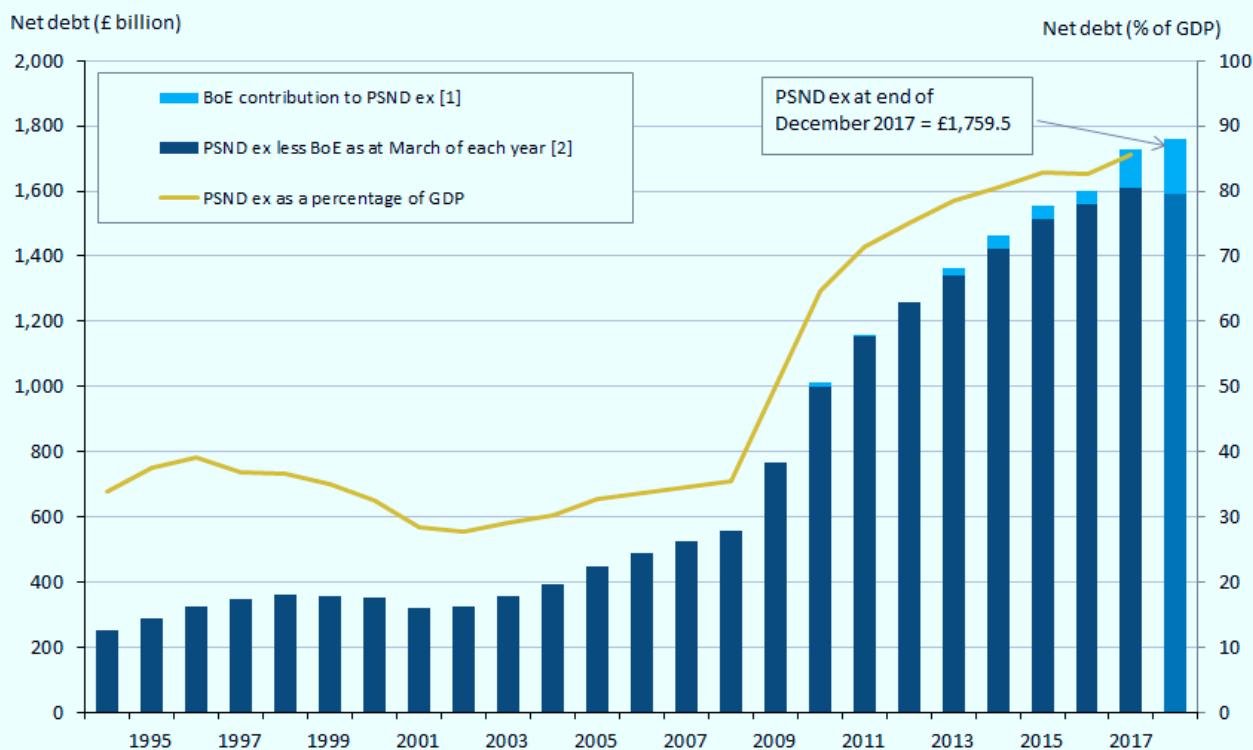

Figure 6 presents public sector net debt excluding public sector banks (PSND ex) at the end of December 2017 by sub-sector. Time series for each of these component series are presented in Tables PSA8A to D in the [Public sector finances Tables 1 to 10: Appendix A dataset](#).

Figure 6: Contributions to public sector net debt (excluding public sector banks) by sub-sector at the end of December 2017 (£ billion), UK

Central Government (CG) gross debt £1,764.9 Series: BKPW	+	Local Government (LG) gross debt £94.8 Series: EYKP	+	Cross holdings ¹ of debt (CG/LG) -£73.9 Series: -KSC7	=	General Government (GG) gross debt [Maastricht Debt] £1,785.8 Series: BKPX

Figure 7 illustrates PSND ex from the financial year ending March 1994 to the end of December 2017.

Figure 7: Public sector net debt (excluding public sector banks), March 1994 to the end of December 2017, UK

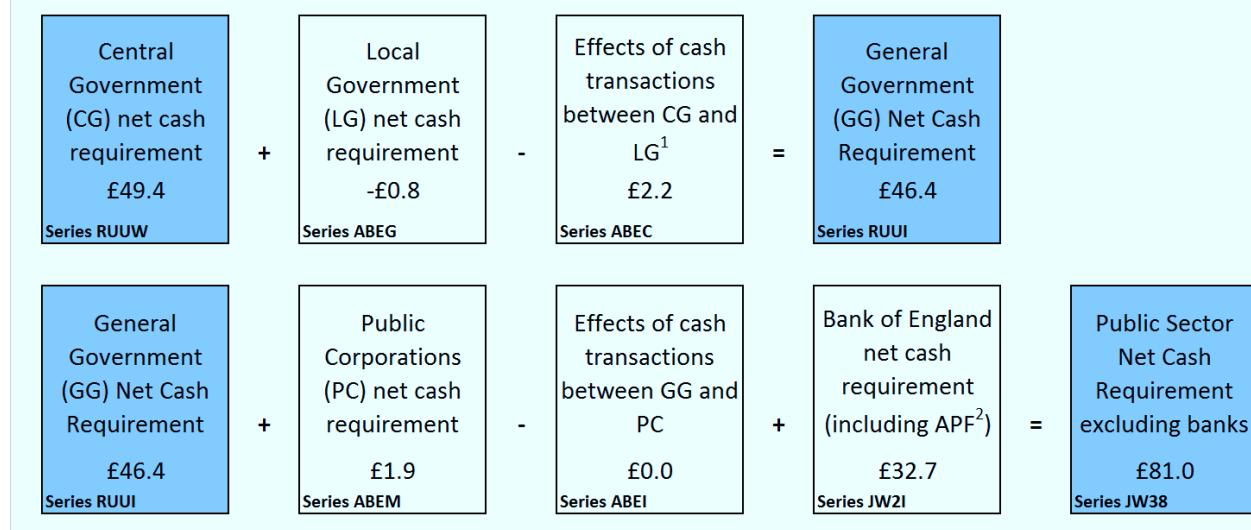

PSND ex increased at the time of the economic downturn. Since then, it has continued to increase but at a slower rate. The introduction of the Term Funding Scheme in late 2016 has led to a rise in net debt, as the loans provided under the scheme are not liquid assets and therefore do not net off in public sector net debt (against the liabilities incurred in providing the loans).

9 . How much cash does the public sector need to raise?

The net cash requirement is a measure of how much cash the public sector needs to raise from the financial markets (or pay out from its cash reserves) to finance its activities. This amount can be close to net borrowing for the same period but there are some transactions, for example, lending to the private sector or the purchase of shares, that need to be financed but do not contribute to net borrowing. Similarly, repayments of principal on loans extended by government or sales of shares will reduce the level of financing necessary but not reduce the net borrowing.

Figure 8 presents public sector cash requirement by sub-sector in the current financial year-to-date (April 2017 to December 2017). Time series for each of these component series are presented in Table PSA7A in the [Public sector finances Tables 1 to 10: Appendix A dataset](#).

Figure 8: Contributions to public sector net cash requirement (excluding public sector banks) by sub-sector in the current financial year-to-date (April to December 2017) (£ billion), UK

Central government net cash requirement (CGNCR) is a focus for some users, as it provides an indication of the volume of gilts (government bonds) the Debt Management Office may issue to meet the government's borrowing requirements.

In the current financial year-to-date (April to December 2017), CGNCR was £49.4 billion, that is, £31.1 billion less than in the same period in the previous year. A number of one-off factors have led to this decrease.

The sale of central government assets

The sale of £11.8 billion of Bradford and Bingley loans to Prudential plc in April 2017, reduced CGNCR by a corresponding amount in the current financial year-to-date.

The redemption of index-linked gilts

The redemption of any government security requires the raising of cash to pay investors:

- the redemption of a 2.5% index-linked gilt in July 2016 required £9.4 billion to repay investors
- the redemption of a 1.25% index-linked gilt in November 2017 required £4.2 billion to repay investors

While both these redemptions increased CGNCR by a corresponding amount in their respective financial year-to-date, £5.2 billion less cash was required in the current financial year-to-date than in the corresponding period in the previous financial year.

CGNCR is quoted both including and excluding the net cash requirement of Network Rail (NR) and UK Asset Resolution Ltd (UKAR, which manages the closed mortgage books of both Bradford and Bingley, and Northern Rock Asset Management). It is the CGNCR excluding NR and UKAR that is the particular focus of users with an interest in the gilt market.

CGNCR excluding NR and UKAR decreased by £34.2 billion to £50.1 billion in the current financial year-to-date (April 2017 to December 2017) compared with the same period in 2016.

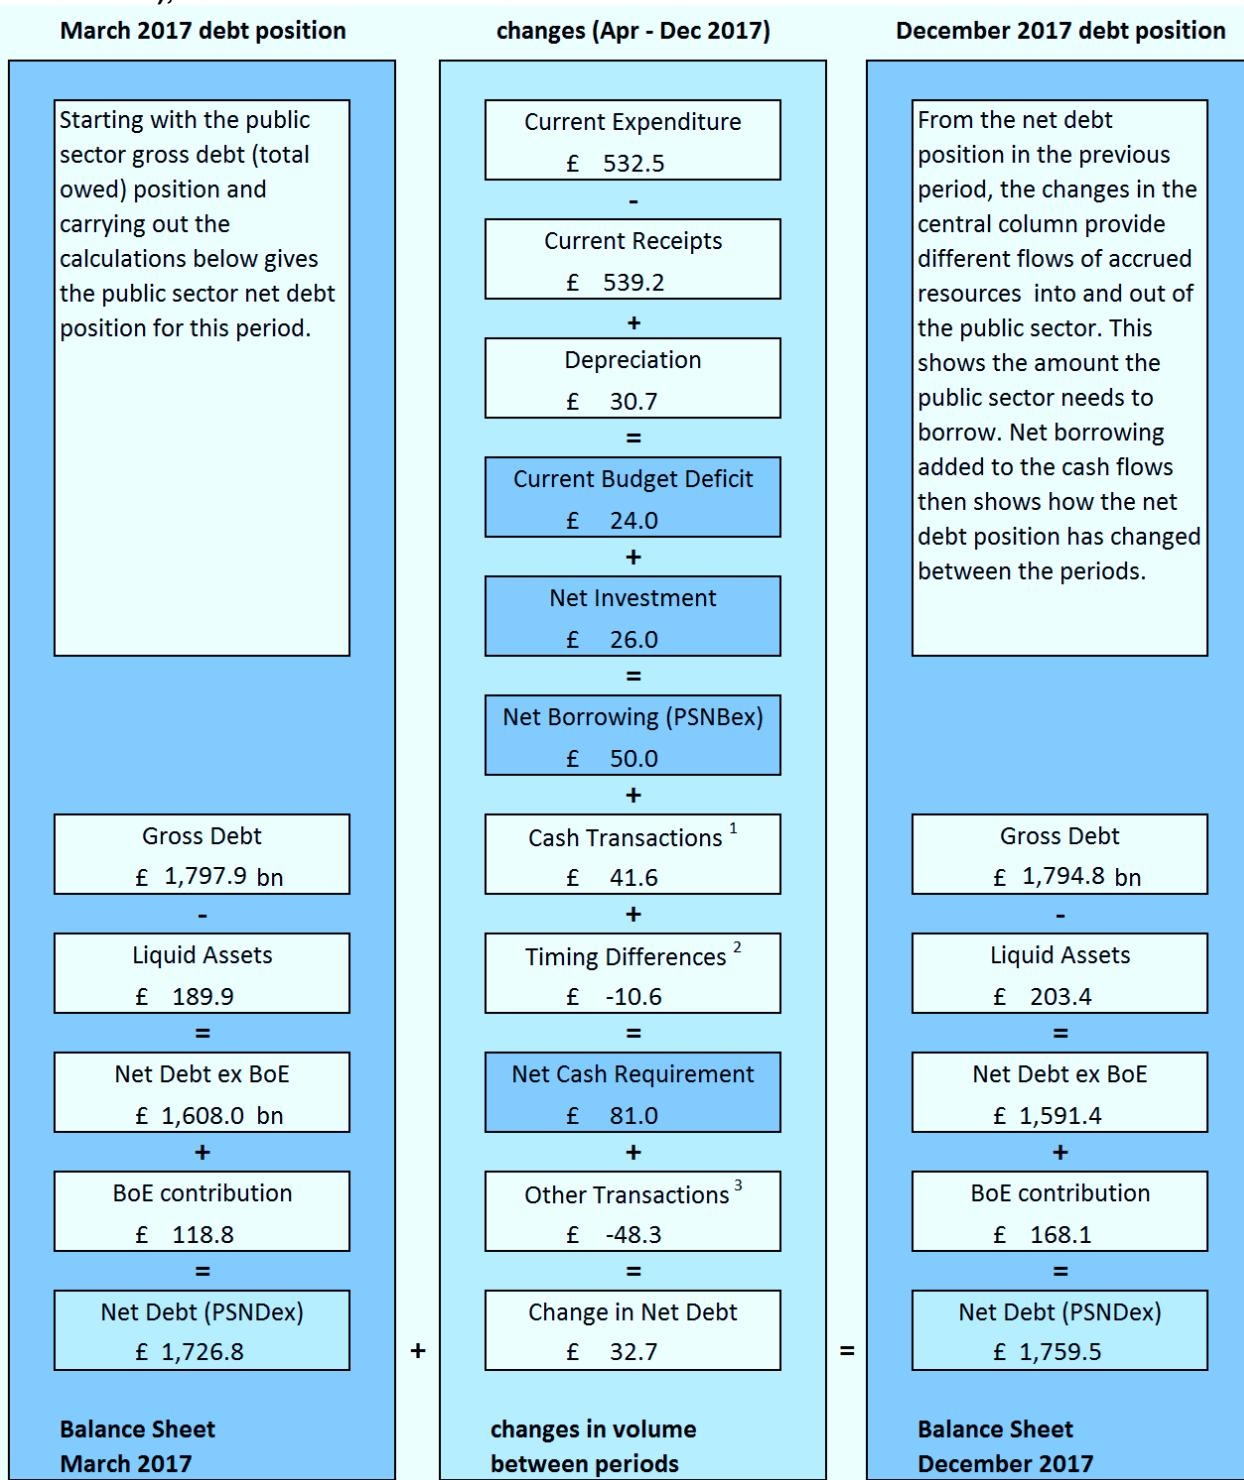

10 . How was debt in the current financial year-to-date accumulated?

Figure 9 brings together the borrowing components detailed in Figure 2 to illustrate how the differences between income and spending (both current and capital) have led to the accumulation of debt in the current financial year-to-date (April to December 2017).

This presentation excludes public sector banks, focusing instead on the public sector net borrowing excluding public sector banks (PSNB ex) measure.

The reconciliation between public sector net borrowing and net cash requirement is presented in more detail in Table REC1 in the [Public sector finances Tables 1 to 10: Appendix A dataset](#).

Figure 9: How the difference in expenditure and receipts affect public sector net debt (excluding public sector banks), UK

11 . How do these figures compare with official forecasts?

The [Office for Budget Responsibility \(OBR\)](#) normally produces forecasts of the public finances twice a year (currently in March and November). The [OBR forecasts](#) used in this bulletin are based on those published on 22 November 2017.

The government has adopted OBR forecasts as its official forecast.

The OBR forecasts that the public sector will borrow £49.9 billion during the current financial year (April 2017 to March 2018), an increase of £3.9 billion on the current outturn estimate for the financial year ending March 2017.

Figure 10 presents the cumulative public sector net borrowing for the latest and previous full financial years. The figure also presents the OBR forecast for the latest financial year.

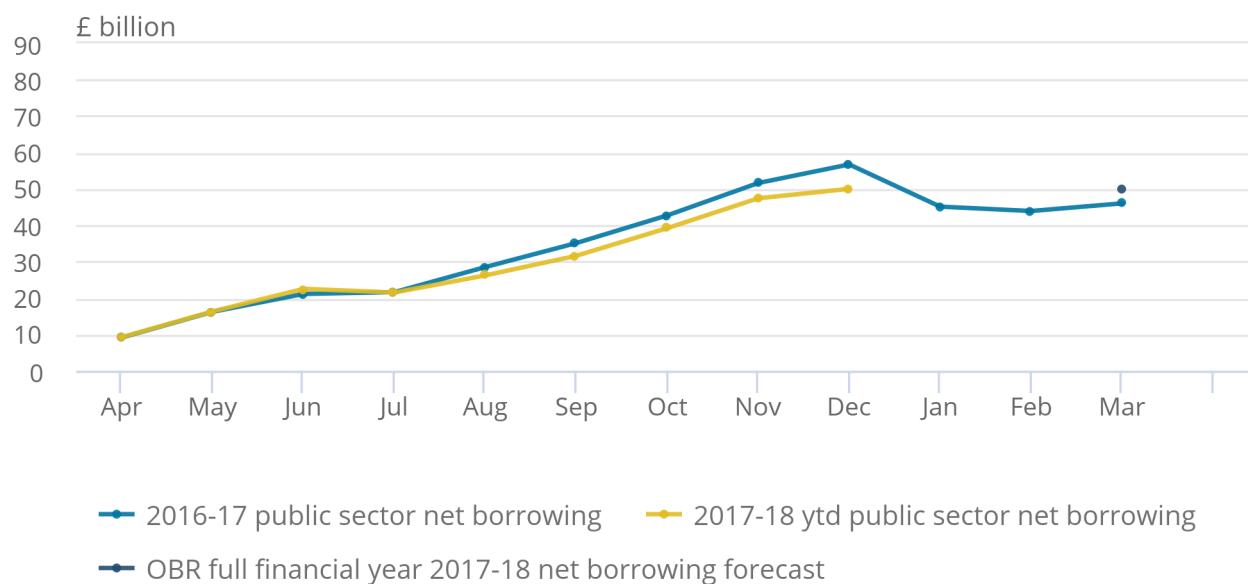

The monthly path of spending and receipts is not smooth within the financial year and also can vary compared with previous years, both of which can affect year-on-year comparisons.

Public sector net borrowing (excluding public sector banks) is currently tracking below that of the last financial year. In December 2017, the gap in financial year-to-date borrowing widened by £3.5 billion to £6.6 billion, helped in part to a credit of £1.2 billion from the European Union.

However, in paragraph 4.40 of their [Economic and fiscal outlook – November 2017](#), the OBR states that it expects receipts growth to slow in the second half of the current financial year which, if it happened, would exert an upward pressure on borrowing.

Figure 10: Public sector net borrowing (excluding public sector banks) in the current financial year-to-date (April to December 2017) compared with the latest full financial year (April 2016 to March 2017), UK

Figure 10: Public sector net borrowing (excluding public sector banks) in the current financial year-to-date (April to December 2017) compared with the latest full financial year (April 2016 to March 2017), UK

Source: Office for National Statistics

Notes:

1. For the financial year ending 2017 (April 2016 to March 2017).
2. For the financial year-to-date ending 2018 (April to December 2017).
3. OBR forecast for public sector net borrowing excluding public sector banks from November 2017 Economic and Fiscal Outlook (EFO).

Table 1 compares the current outturn estimates for each of our main public sector (excluding public sector banks) aggregates for the latest full financial year with corresponding OBR forecasts for the following financial year. Further, it compares the current year-to-date outturn estimates with those of the previous financial year-to-date.

Caution should be taken when comparing public sector finances data with OBR figures for the full financial year, as data are not finalised until sometime after the financial year ends, with initial estimates made soon after the end of the financial year often subject to sizeable revisions in later months as forecasts are replaced with audited outturn data.

There may also be known methodological differences between OBR forecasts and outturn data.

Table 1: Latest out-turn estimates compared with Office for Budget Responsibility (OBR) forecasts in the current financial year-to-date (April to December 2017) compared with the latest full financial year (April 2016 to March 2017), UK

UK, excluding public sector banks	£ billion ¹ (not seasonally adjusted)						
	Financial year-to-date ⁷			Full financial year ⁸			
	2016/17	2017/18 ⁸	% change	2016/17 Outturn	2017/18 OBR Forecast ⁹	% change

Source: Office for National Statistics

Notes

1. Unless otherwise stated.
2. Current budget deficit is the difference between current expenditure (including depreciation) and current receipts.
3. Net investment is gross investment (net capital formation plus net capital transfers) less depreciation.
4. Net borrowing is current budget deficit plus net investment.
5. Net debt is financial liabilities (for loans, deposits, currency and debt securities) less liquid assets.
6. GDP at current market price.
7. Financial year-to-date refers to the period from April to December.
8. 2017/18 refers to financial year ending in March 2018 and 2016/17 refers to financial year ending in March 2017.
9. All OBR figures are from the OBR Economic and Fiscal Outlook published in November 2017.
10. NA means "not applicable".

12 . Revisions since previous release

Revisions can be the result of both updated data sources and methodology changes. This month, all reported revisions are as a result of updated data sources.

Table 2 presents the revisions to the headline statistics presented in this bulletin compared with those presented in the previous publication (published on 21 December 2017).

Revisions to public sector net borrowing in the current financial year-to-date

Public sector net borrowing excluding public sector banks (PSNB ex) for the period April to November 2017 has been revised down by £0.7 billion compared with figures presented in the previous public sector finances (PSF) bulletin (published on 21 December 2017).

Figure 11 breaks down this revision to PSNB ex by each of its four sub-sectors: central government, local government, non-financial public corporations and Bank of England (BoE).

Given that, in the latest financial year-to-date, £48.5 billion of the £50.0 billion borrowed by the public sector was borrowed by central government, a further breakdown of central government current receipts and current expenditure is provided to reflect the significance of these components.

Central government net borrowing was revised down by £0.6 billion, due largely to an increase in the estimate of taxes.

Both the £0.7 billion downward revision to Value Added Tax (VAT) and the £0.9 billion upward revision to Corporation Tax are a result of updated cash data received from HM Revenue and Customs replacing previous forecasts. Further, this month we report upward revisions of £0.1 billion to both taxes on alcohol and tobacco.

Rewvisions to tax receipts are not unusual and occur to varying extents each month as (provisional) outturn data replace forecasts.

Rewvisions to public sector net borrowing in previous financial years

In the financial year ending March 2017, PSNB ex has been revised up by £0.5 billion since the [previous PSF publication \(published on 21st December 2017\)](#). In this period, central government net borrowing revised up by £0.5 billion due to a decrease in the estimate of corporation tax.

Rewvisions to public sector net debt

Public sector net debt excluding public sector banks (PSND ex) at the end of November 2017 has been revised upwards by £0.5 billion compared with that presented in the previous PSF bulletin (published on 21 December 2017).

This change is largely the result of an upward revision of £0.3 billion to the Bank of England's contribution to net debt, via its Asset Purchase Facility Fund.

The reporting of errors in the public sector finances dataset

It is important to note that revisions do not occur as a result of errors; errors lead to corrections and are identified as such when they occur.

As a result of the ongoing quality assurance of our systems, in the process of compiling this bulletin, we have identified and corrected two (unrelated) errors in our central government cash reconciliations. Neither of these errors affected our estimates of public sector net borrowing, net cash requirement or net debt.

Further checks have been introduced in our central government reconciliations to mitigate the risk of such errors re-occurring.

The reconciliation of central government net cast requirement

We identified that cash components relating to dividends from the Asset Purchase Facility Fund were being incorrectly recorded in the current financial year-to-date (April to November 2017). These overstated receipts were offset in “net departmental outlays” (expenditure) and so maintaining the correct central government net cash requirement.

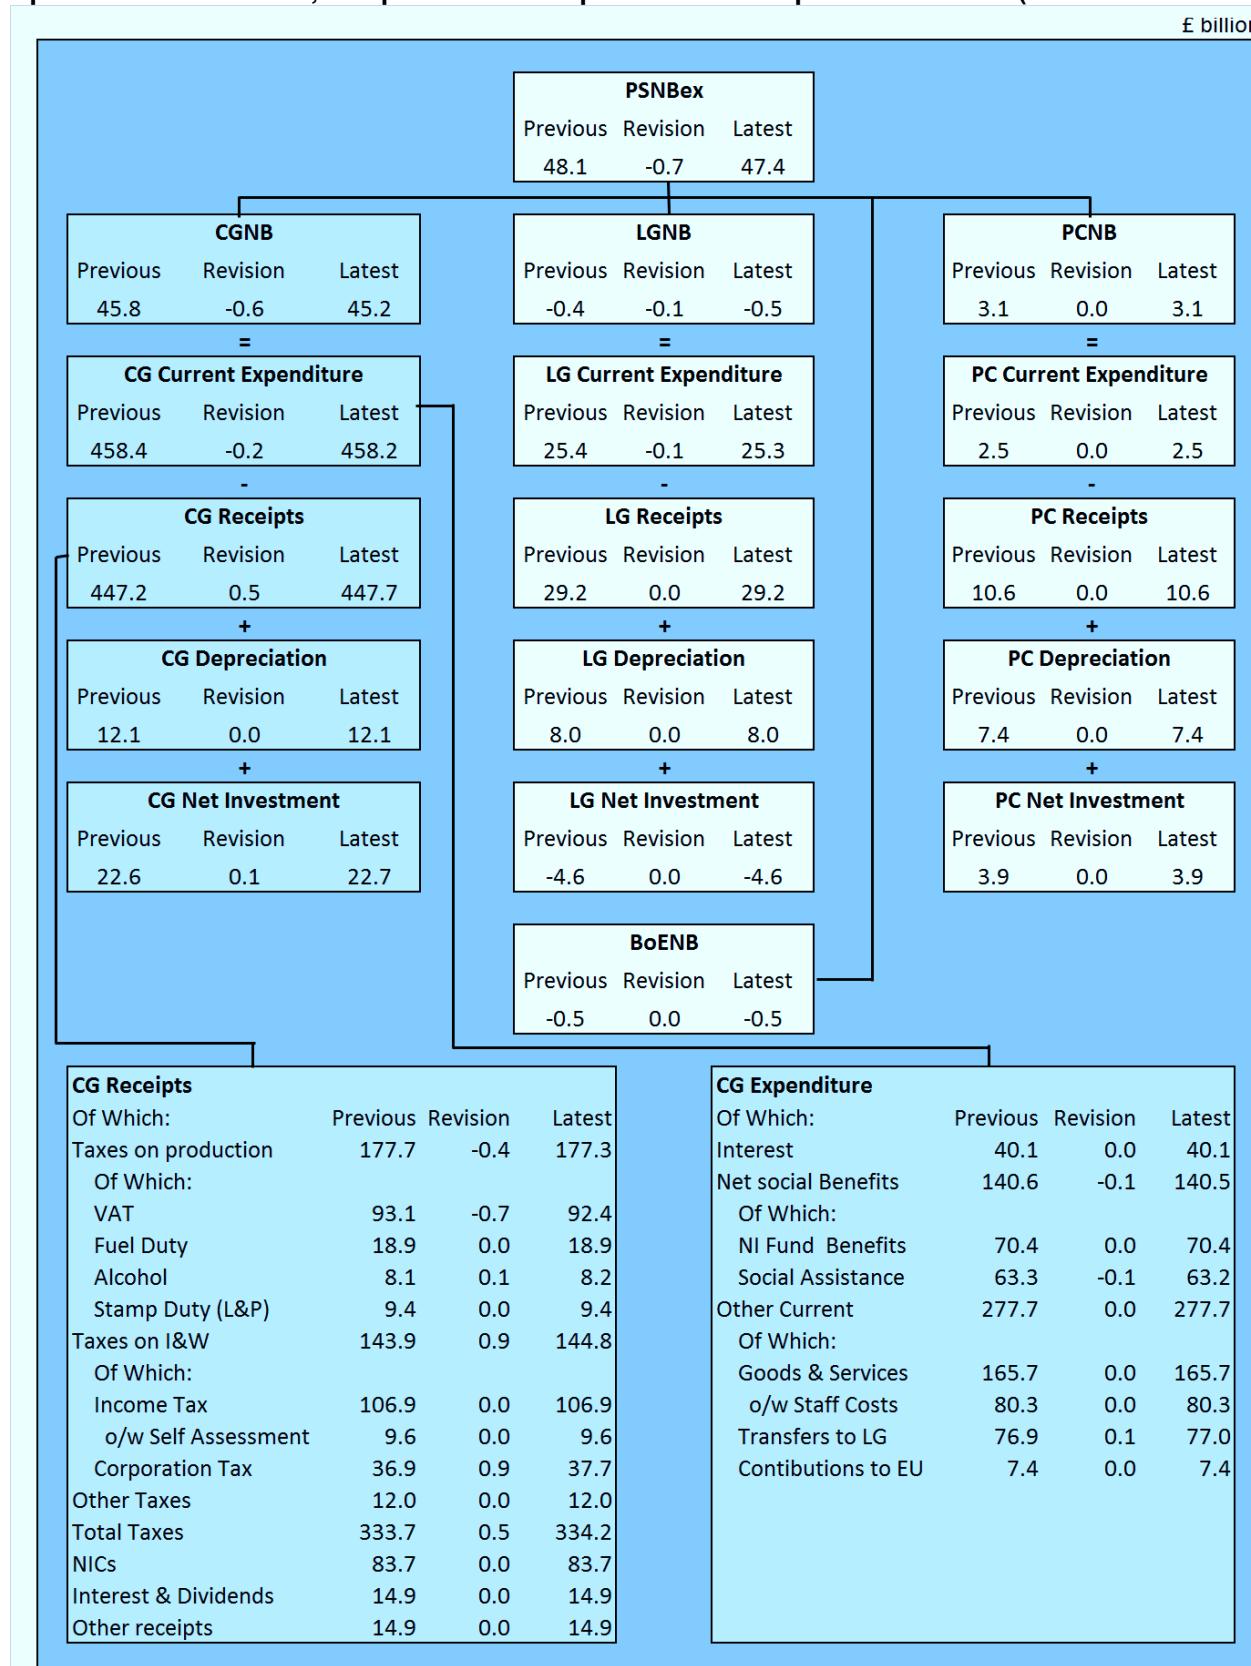

As a result of this correction, in Table PSA7D, “other” central government receipts and “net department outlays” (expenditure) have both been reduced by a total of £17.1 billion in the current financial year-to-date.

The reconciliation of central government net borrowing and net cast requirement

We identified that the timing adjustments recorded between cash and accrued Corporation Tax receipts had been included twice in our central government net borrowing to net cash requirement reconciliation, Table REC2.

This error, affecting the period April 2000 to date, has now been corrected with an off-setting switch of between positive £4.4 billion and negative £6.4 billion per financial year between “Accounts receivable/payable” and “Other financial transactions”. This correction only impacts on the presentations of Tables REC1 and REC2.

Figure 11: Latest estimate of public sector net borrowing (excluding public sector banks) over the period April to November 2017, compared with that presented in the previous bulletin (21 December 2017), UK

13 . International comparisons of borrowing and debt

The UK government debt and deficit statistical bulletin is published quarterly (in January, April, July and December each year), to coincide with when the UK and other EU member states are required to report on their deficit (or net borrowing) and debt to the European Commission.

On 17 January 2018, we published the latest [UK government debt and deficit statistical bulletin](#), consistent with the [November 2017 public sector finances bulletin](#) (published on 21 December 2017). In this publication we stated that:

- general government gross debt was £1,720.0 billion at the end of March 2017, equivalent to 86.7% of gross domestic product (GDP); an increase of £68.1 billion on March 2016
- general government deficit (or net borrowing) was £46.9 billion in the financial year ending March 2017 (April 2016 to March 2017), equivalent to 2.4% of GDP; a decrease of £29.0 billion on March 2016

This bulletin reports an unchanged estimate of general government gross debt compared with that published on 21 December 2017; however, the estimate of deficit in the financial year ending March 2017 has been revised up by £0.5 billion to £47.4 billion.

It is important to note that the GDP measure, used as the denominator in the calculation of the debt ratios in the UK government debt and deficit statistical bulletin, differs from that used within the public sector finances statistical bulletin.

An article, [The use of GDP in public sector fiscal ratio statistics](#), explains that for debt figures reported in the monthly public sector finances, a 12-month GDP total centred on the month is employed, while in the UK government debt and deficit statistical bulletin, the total GDP for the preceding 12 months is used.

14 . Quality and methodology

The public sector finances [Quality and Methodology Information](#) report contains important information on:

- the strengths and limitations of the data and how it compares with related data
- uses and users of the data
- how the output was created
- the quality of the output including the accuracy of the data

How is the debt interest paid by the government affected by movements in the level of Retail Price Index?

Index-linked gilts, a form of government bond, are indexed to the Retail Price Index (RPI). When the RPI rises, the inflation uplift that applies to index-linked cash flows (both regular coupon payments and final payment at gilt maturity) also rises. If the RPI should fall, the inflation uplift would also fall. In this way, the returns to the investor from holding index-linked gilts are maintained in real terms – as measured by the RPI.

Taking £100 as the unit price for a gilt, an index-linked gilt will pay more than £100 at redemption if the RPI increases over the life of the gilt. Similarly, if the RPI increases over the life of the gilt each coupon payment will be higher than the previous one; while if the RPI were to decrease, a coupon payment could be lower than the previous one.

Both the uplift on coupon payments and the uplift on the redemption value are recorded as debt interest paid by the government, so month-on-month there can be sizeable movements in payable government debt interest as a result of movements in the RPI.

Time series of central government debt interest (series identifier NMFX) and the index-linked gilt capital uplift (series identifier MW7L) are available in Tables PSA6B and REC3 in the [tables associated with this release](#) or by [searching directly by series identifier](#).

Adjustments to local government data in the current financial year-to-date

Most local government data are annual, relating to financial years (April to March), and based on information collected from local authorities by the Ministry of Housing, Communities and Local Government (MHCLG) and the devolved administrations.

The data are collected in two main phases: budget, before the start of the financial year, and outturn, after the end of the financial year.

Some information is available within the year and this is taken into account wherever possible.

In recent years, planned expenditure initially reported in budgets has systematically been higher than the final outturn expenditure reported in the audited accounts. We therefore include adjustments to reduce the amounts reported at the budget stage and this affects the figures for the latest financial year-to-date.

UK Statistics Authority assessment of public sector finances

On 20 June 2017, the UK Statistics Authority [published a letter](#) confirming the designation of the monthly public sector finances bulletin as a [National Statistic](#). This letter completes the 2015 assessment of [public sector finances](#).

In order to meet the requirements of this assessment we published an article, [Quality assurance of administrative data used in the UK public sector finances](#). This report provides an assessment of the administrative data sources used in the compilation of the public sector finances statistics in accordance with the UK Statistics Authority's [Administrative Data Quality Assurance Toolkit](#).

How classification decisions are made

Each quarter we publish a [forward workplan](#) outlining the classification assessments we expect to undertake over the coming 12 months. To supplement this, each month a [classifications update](#) is published, which announces classification decisions made and includes expected implementation points (for different statistics) where possible.

[Classification decisions](#) are reflected in the public sector finances at the first available opportunity and, where necessary, outlined in this section of the statistical bulletin.

The [Monthly statistics on the public sector finances: a methodological guide](#) (PDF, 360KB) was last updated in August 2012. We are currently working to update this publication.

Pre-release access to ONS statistics

On 15 June 2017, the [National Statistician announced](#) that from 1 July 2017 pre-release access to Office for National Statistics (ONS) statistics would cease. While there is no longer any pre-release access granted to the public sector finances bulletin, it should be noted that this bulletin remains jointly produced by members of the Government Statistical Service (GSS) working in both ONS and HM Treasury.

GSS staff will continue to work together to produce the bulletin but ministers and those officials not directly involved in the production and release of statistics will not have access to them in advance of publication.

Time series data

We recently reviewed and improved the content of our downloadable time series data file consistent with the data underlying each public sector finances statistical bulletin and the accompanying [public sector finances borrowing by sub-sector](#) presentation.

All data contained within these publications are available to download via the [Public sector finances time series dataset](#). From April 1997 to date, where available, time series are presented as monthly data, with series extending further back in time, generally presented on a quarterly or financial year basis.

Time series exclusive to the public sector finances borrowing by sub-sector presentation are only available as quarterly time series, though these extend back to 1946.

Supporting documentation

Documentation supporting this publication is available in appendices to the bulletin:

- [Public sector finances Tables 1 to 10: Appendix A](#)
- [Large impacts on public sector fiscal measures excluding banking groups: Appendix B](#)
- [Public sector finances revisions analysis on main fiscal aggregates: Appendix C](#)
- [Public sector current receipts: Appendix D](#)
- [Impact of the reclassification of housing associations into the public sector: Appendix E](#)
- [Public sector net financial liabilities excluding public sector banks \(PSNFL ex\): Appendix F](#)
- [Revisions to the first reported estimate of public sector net borrowing: Appendix G](#)

Public sector borrowing by sub-sector

Each month, at 9.30am on the working day following the public sector finances statistical bulletin, we publish [Public sector finances borrowing by sub-sector](#). This release contains an extended breakdown of public sector borrowing in a matrix format and also estimates of total managed expenditure (TME).

1 Unless otherwise stated

2 Current Budget Deficit is the difference between current expenditure and current receipts

3 Net Investment is investment less depreciation

4 Net Borrowing is Current Budget Deficit less Net Investment

5 APF - Bank of England Asset Purchase Facility

6 SLS - Special liquidity Scheme

7 This ratio employs a 12 month centred moving average of GDP

8 Change measured in percentage points

Relationship between columns: 1=2+4+7 ; 10=2+3+6+9 ; 12=10+11

GGNCR (series RUUL) =1+5

1 Previously known as the borrowing requirement of the sector concerned

2 Includes Bank of England Asset Purchase Facility Fund and Special Liquidity Scheme. Figures derived from Bank of England accounts and ONS estimates

Figures for most recent months are ONS estimates

3 Excluding public sector banks

4 NCR = Net Cash Requirement

PSA7C Central Government Net Cash Requirement

Relationships between columns 1+3+4=5 ; 2+3+4=6 ; 6+7+8=5

1 NRAM = Northern Rock Asset Management, B&B = Bradford and Bingley.

2 NCR = Net Cash Requirement

3 Does not include Net Cash Requirement to Central Government

4 Negative NCR reflects change in financing as from 2014/15 new financing requirements of Network Rail were met through core central government borrowing and are therefore included in main CGNCR.

PSA7D Central Government Net Cash Requirement on own account (receipts and outlays on a cash basis)

Relationships between columns 1+6+7=8; 9+10+11=12; 12-8=13

1 Comprises payments into the Consolidated Fund and all payovers of NICS excluding those for Northern Ireland.

2 Income tax includes capital gains tax and is gross of any tax credits treated by HM Revenue and Customs as tax deductions.

3 UK receipts net of personal pension rebates; gross of Statutory Maternity Pay and Statutory Sick Pay.

4 Payments into Consolidated Fund.

5 Including some elements of expenditure not separately identified.

6 Mainly comprises privatisation proceeds.

7 Net of certain receipts, and excluding on-lending to local authorities and public corporations.

8 A much more detailed breakdown of tax receipts is available from HM Revenue and Customs at www.hmrc.gov.uk/statistics/receipts.htm.

REC3 Reconciliation of Central Government Net Cash Requirement and Changes in Net Debt (Experimental Statistic)

Relationship between columns 14=1+2+3+4+5+6+7+8+9+10+11+12

1 Excluding Northern Rock Asset Management (NRAM), Bradford & Bingley (B&B) and Network Rail (NR) - although cash flows relating to NRAM and B&B are included from October 2014 and for NR from April 2015

2 All adjustments reflect differences between when, and at what value, liabilities and assets are scored in net debt and their related cash flows

3 Includes gilts that are transferred to central government (such as those previously held by the Royal Mail Pension Plan) as well as timing differences where cash flows and debt movements were recorded in adjacent months

4 Includes the impact of imputed finance leases as well as the reclassifications of London Continental Railway and the reorganisation of the Housing Revenue Account
