1 . Main points

Public sector net borrowing (excluding public sector banks) decreased by £3.0 billion to £23.7 billion in the current financial year-to-date (April to July 2016), compared with the same period in 2015.

Public sector net borrowing (excluding public sector banks) was in surplus by £1.0 billion in July 2016; a decrease in surplus of £0.2 billion compared with July 2015.

Public sector net debt (excluding public sector banks) at the end of July 2016 was £1,604.2 billion, equivalent to 82.9% of gross domestic product (GDP); an increase of £35.3 billion compared with July 2015.

This is the second successive month of debt falling on the year as a percentage of GDP and indicates that GDP is currently increasing (year-on-year) faster than net debt excluding public sector banks. However, care should be taken when inferring trends from only two months' data, especially given the provisional nature of centred GDP estimates for the latest month.

Central government net cash requirement decreased by £5.1 billion to £22.2 billion in the current financial year-to-date (April to July 2016), compared with the same period in 2015.

Due to the volatility of the monthly data, the cumulative financial year-to-date borrowing figures provide a better indication of the progress of the public finances than the individual months.

The data presented in this bulletin presents the latest fiscal position of the public sector as at 31 July 2016 and so includes the first post-EU referendum data. However, estimates for the latest period always contain a substantial forecast element and so any post-referendum impact may not become clear for some time.

EU government debt and deficit

On 15 July 2016, we published the latest [UK Government Debt and Deficit for Eurostat statistical bulletin](#) which reported that:

- general government deficit (Maastricht borrowing) in the financial year ending March 2016 (April 2015 to March 2016) was £74.5 billion, equivalent to 4.0% of GDP
- general government gross debt (Maastricht debt) at the end of March 2016 was £1,649.2 billion, equivalent to 87.7% of GDP

This publication reports a slightly revised Maastricht borrowing, in the financial year ending March 2016, to £74.9 billion (equivalent to 4.0% of GDP) and Maastricht debt at the end of March 2016, at £1,649.5 billion (equivalent to 87.8% of GDP).

Please refer to section 7, International comparisons of borrowing and debt for further detail.

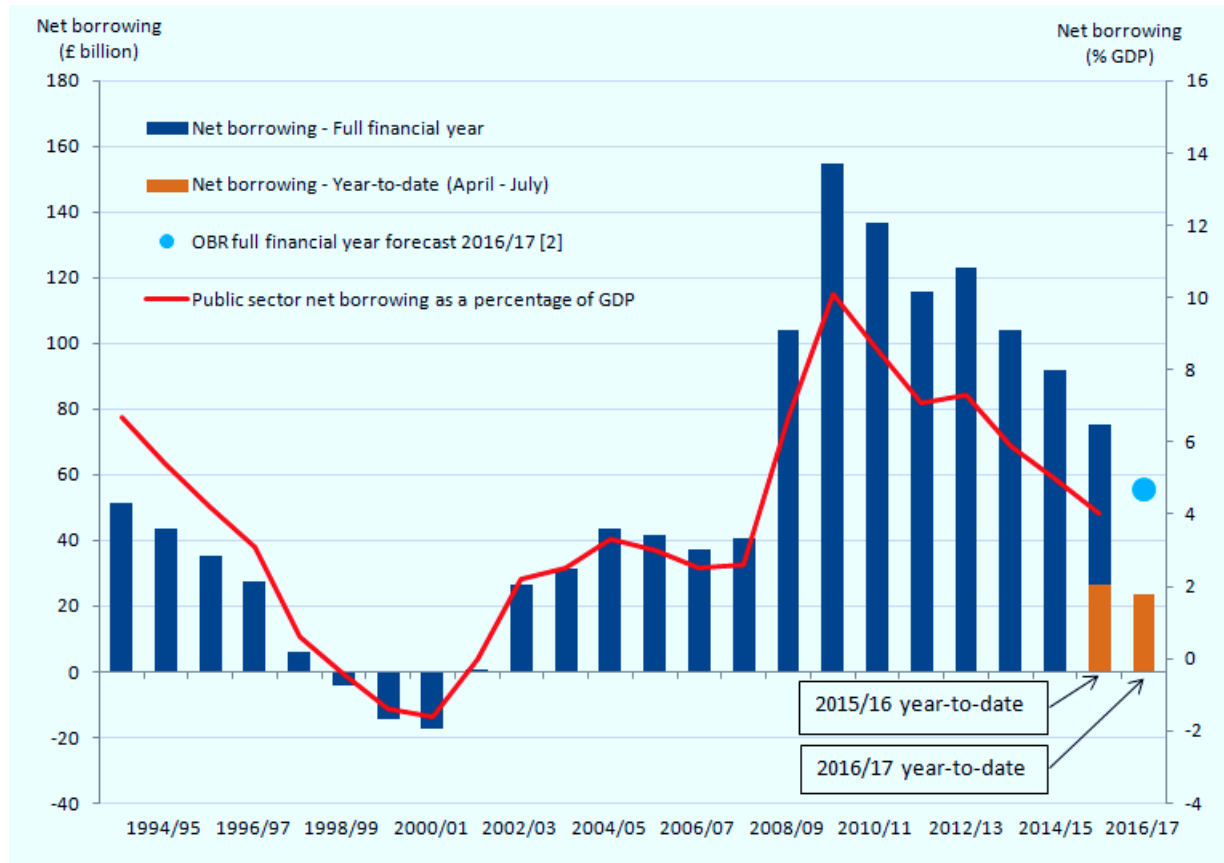

2 . Summary

This section provides a summary of the main messages of this statistical bulletin which you may find helpful. You may also like to receive Twitter updates by following [@frasermunropsf](#). We recently published an article titled [The debt and deficit of the UK public sector explained](#) which you may also find useful.

The data presented in this bulletin presents the latest fiscal position of the public sector as at 31 July 2016 and so includes the first post-EU referendum data. However, estimates for the latest period always contain a substantial forecast element and so any post-referendum impact may not become clear for some time.

Figure 1: The amount borrowed by the public sector has been falling since the peak in the financial year ending March 2010

UK public sector borrowing, April 1993 to July 2016

Public sector borrowing (or deficit)

In July 2016, the public sector spent less money than it received in taxes and other income, saving £1.0 billion.

Of this £1.0 billion surplus, the public sector saved £3.8 billion related to the cost of its “day-to-day” activities of the public sector (the current budget deficit), though it spent £2.8 billion on infrastructure (net investment), £0.6 billion more than in July 2015.

In the current financial year-to-date (April to July 2016), the public sector borrowed £23.7 billion. This was £3.0 billion lower than in the previous financial year-to-date.

Annual borrowing has generally been falling since the peak in the financial year ending March 2010 (April 2009 to March 2010).

In the financial year ending March 2016 (April 2015 to March 2016), the public sector borrowed £75.3 billion. This was £16.5 billion lower than in the previous financial year. These are not final figures and may be revised over the coming months as provisional data are replaced with finalised and audited data.

Current estimate suggests that borrowing in the financial year ending March 2016 is less than half of that in the financial year ending March 2010 (both in terms of £ billion and percentage of GDP).

The [Office for Budget Responsibility \(OBR\)](#), which produces economic and fiscal forecasts for government, recorded that the public sector would borrow £72.2 billion during the financial year ending March 2016. So, based on the provisional estimate, borrowing in financial year ending March 2016 is £3.1 billion higher than OBR predicted.

OBR have estimated that the public sector will borrow £55.5 billion during the financial year ending March 2017; a reduction of £19.8 billion on the financial year ending March 2016.

Income and spending by central government

Central government's income and spending make the largest contribution to the amount borrowed by the public sector. In the current financial year-to-date (April to July 2016), central government received £213.6 billion in income. This was around 3% higher than in the previous financial year-to-date, largely due to receiving more Income Tax, Corporation Tax and National Insurance contributions, along with taxes on production such as VAT and Stamp Duty, compared with the previous year.

Over the same period (April to July 2016), central government spent £233.8 billion; roughly the same as in the previous financial year. Of this amount, just below two-thirds was spent by central government departments (such as health, education and defence), around a third on social benefits (such as pensions, unemployment payments, Child Benefit and Maternity Pay) with the remaining being spent on capital investment and interest on the government's outstanding debt.

Debt

While deficit represents the difference between income and spending over a period of time, debt represents the total amount of money owed at a point in time. Debt has been built up by successive government administrations over many years. When the government borrows, this adds to the debt total. So reducing the deficit is not the same as reducing the debt.

The amount of money owed by the government to the private sector stood at £1.6 trillion at the end of July 2016, which equates to 82.9% of the value of all the goods and services currently produced by the UK economy in a year (or GDP).

Figure 2 : Public sector debt increased rapidly following the banking crisis in the financial year ending March 2008

UK public sector debt, March 1994 to July 2016

3 . Understanding this release

This statistical bulletin provides important information on the UK government financial position. It enables government, the public, economists and financial analysts to monitor public sector expenditure, receipts, investments, borrowing and debt. By comparing these data with forecasts from The [Office for Budget Responsibility \(OBR\)](#) the current UK fiscal position can be evaluated.

Table 7: Terms to help you understand this release, located in the background notes of this bulletin, is intended to provide users with the important terms needed to understand the data within this bulletin. We recently published an article titled The [debt and deficit of the UK public sector explained](#) which you may also find useful.

Headline public sector finances data

This release presents the first estimate of July 2016 public sector finances, along with the financial year-to-date, April to July 2016. While public sector finance data are available on a monthly basis, due to the volatility of the monthly time series, it is often more informative to look at the financial year-to-date or complete financial year data in order to discern underlying patterns. Estimates are revised over time as additional data becomes available.

Table 1 summarises the latest headline public sector finances measures, comparing the latest month and cumulative totals for the financial year-to-date, with the equivalent period in the previous financial year.

Table 1: Headline public sector finances data, by month and financial year-to-date

UK, excluding public sector banks

	£ billion ¹ (not seasonally adjusted)					
	July			Financial year-to-date ⁷		
	2016	2015	Change	2016/17 ⁸	2015/16 ⁸	Change
Current budget deficit ²	-3.8	-3.4	-0.4	15.5	19.4	-3.8
Net investment ³	2.8	2.3	0.6	8.2	7.4	0.8
Net borrowing ⁴	-1.0	-1.2	0.2	23.7	26.7	-3.0
Net debt ⁵	1,604.2	1,568.9	35.3	1,604.2	1,568.9	35.3
Net debt as a percentage of annual GDP ⁶	82.9	83.8	-0.9	82.9	83.8	-0.9

Source: Office for National Statistics

Notes:

1. Unless otherwise stated.
2. Current budget deficit is the difference between current expenditure (including depreciation) and current receipts.
3. Net investment is gross investment (net capital formation plus net capital transfers) less depreciation.
4. Net borrowing is current budget deficit plus net investment.
5. Net debt is financial liabilities (for loans, deposits, currency and debt securities) less liquid assets.
6. GDP at current market price.
7. Financial year-to-date refers to the period from April to July
8. 2016/17 refers to financial year ending in March 2017 and 2015/16 refers to financial year ending in March 2016.

Time series for each component are available in Table PSA1 in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

How the public sector finances fit together

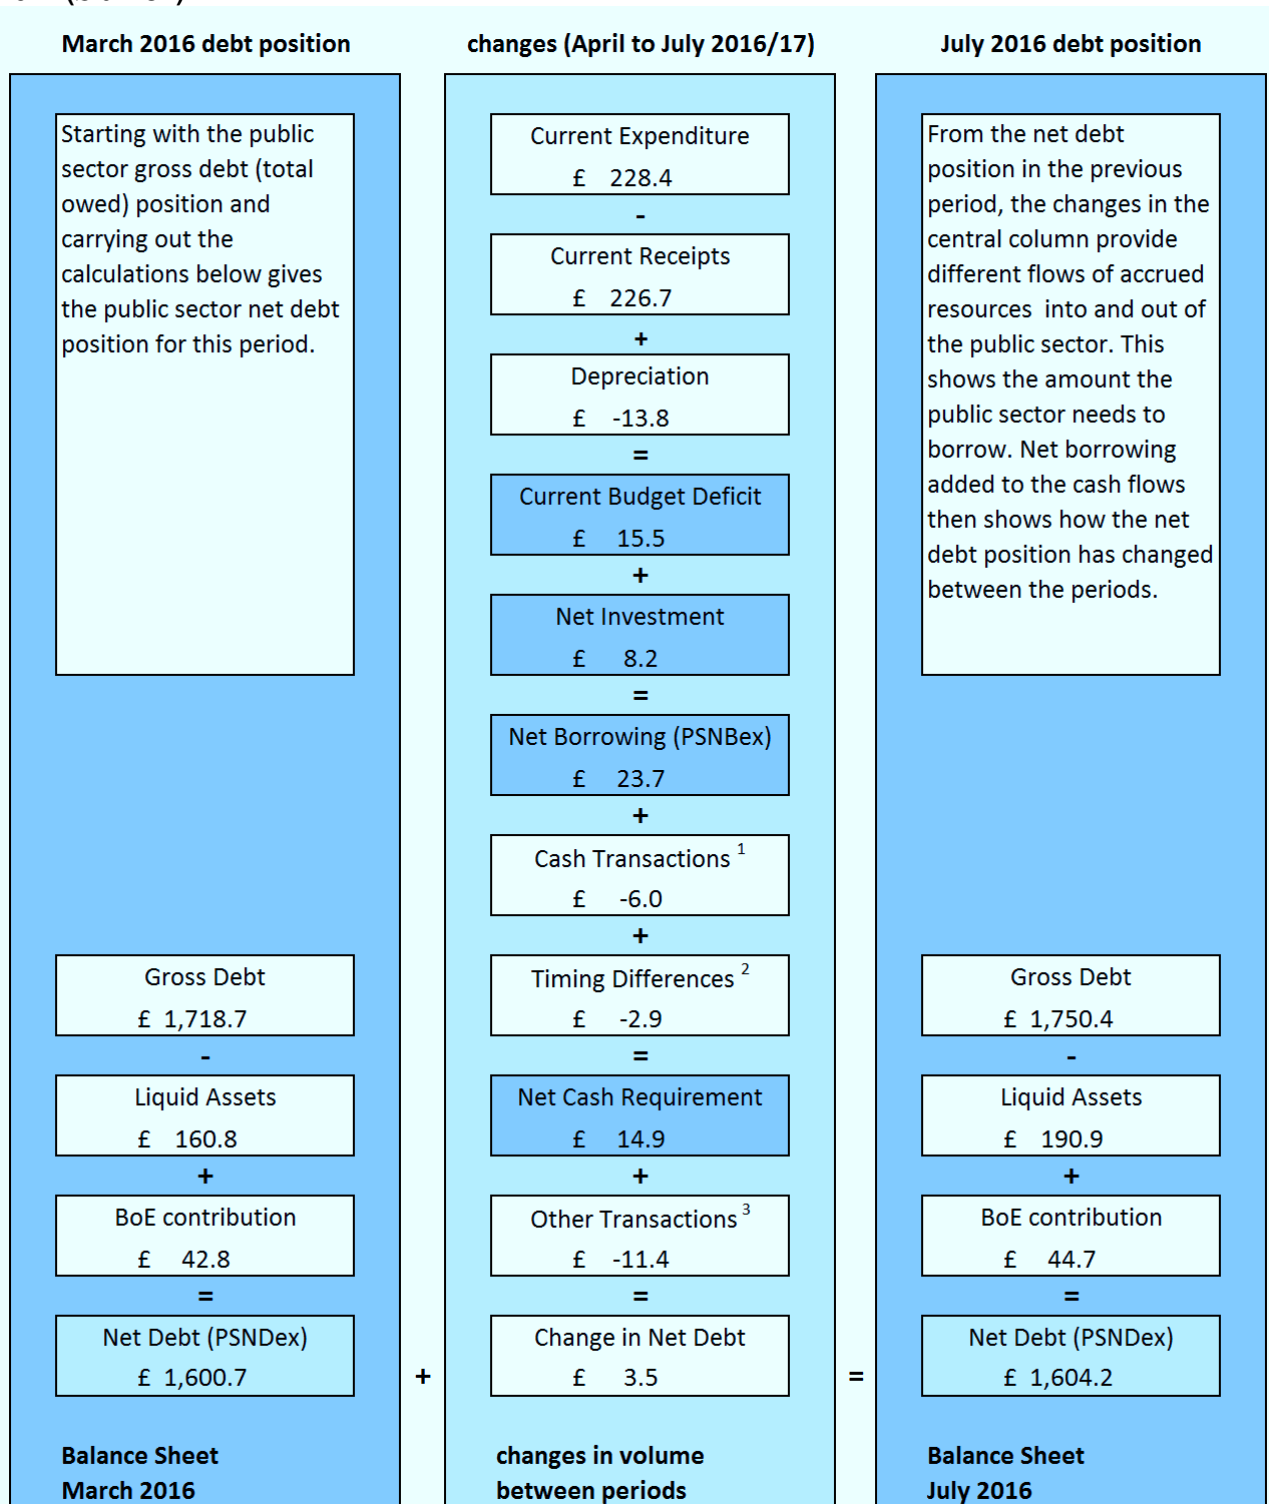

Figure 3 illustrates how the difference in income (often referred to as current receipts) and spending (often referred to as current expenditure) lead to the accumulation of debt.

The headline measures of current budget deficit, net borrowing, net cash requirement and net debt are highlighted in the diagram as they provide the important indicators for the performance of the UK public finances.

When expenditure is greater than income, the public sector runs a deficit, known as the current budget deficit. Net borrowing is made up of the current budget deficit plus net investment (spending on capital less capital receipts). The diagram shows how net borrowing contributes to the change in net debt.

The net cash requirement is closely related to net debt (the amount owed). It is important because it represents the cash needed to be raised from the financial markets to service the government's borrowing deficit. Changes in net debt between 2 points in time are normally similar to the net cash requirement for the intervening period, though the relationship is not an exact one.

Figure 3: Changes in public sector finances (excluding public sector banks) financial year to date ending 2017 (£ billion)

4 . The latest public sector net borrowing position

In the UK, the public sector consists of 5 sub-sectors: central government, local government, public non-financial corporations, Bank of England and public financial corporations (that is, public sector banks).

Table 2 summarises the current monthly and financial year-to-date borrowing position of each of these sub-sectors along with the public sector aggregates.

Full time series for these data can be found in Table PSA2 in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

Table 2: Sub-sector breakdown of public sector net borrowing, by month and financial year-to-date

UK						
£ billion (not seasonally adjusted)						
	July			Financial year-to-date ¹		
	2016	2015	Change	2016/17 ²	2015/16 ²	Change
General government	-1.3	-1.0	-0.3	21.9	25.3	-3.3
of which						
Central government	-1.7	-0.6	-1.1	26.8	31.6	-4.8
Local government	0.4	-0.5	0.9	-4.9	-6.4	1.5
Public non-financial corporations	0.2	0.3	-0.1	0.8	1.1	-0.3
Bank of England	0.1	-0.5	0.6	0.9	0.3	0.6
Public sector ex (PSNB ex)	-1.0	-1.2	0.2	23.7	26.7	-3.0
Public financial corporations	-0.5	-0.5	0.0	-2.0	-2.3	0.3
Public sector (PSNB)	-1.5	-1.7	0.2	21.7	24.4	-2.7

Source: Office for National Statistics

Notes:

1. Financial year-to-date refers to the period from April to July.

2. 2016/17 refers to financial year ending in March 2017 and 2015/16 refers to financial year ending in March 2016.

Figure 4 illustrates public sector net borrowing excluding public sector banks (PSNB ex) for the last 23 financial years. For all but 3 years in the period the public sector has been in deficit and had to borrow to fund the gap between expenditure and revenue.

Figure 4: Public sector net borrowing excluding public sector banks; the financial year ending 1994 to the financial year ending 2017¹

UK, all data excluding public sector banks

PSNB ex peaked in the financial year ending March 2010 (April 2009 to March 2010) as the effects of the economic downturn impacted on the public finances (reducing tax receipts while expenditure continued to increase).

In the financial year ending March 2016 (April 2015 to March 2016), the public sector borrowed £75.3 billion. This was £16.5 billion lower than in the previous financial year. These are not final figures and may be revised over the coming months as provisional data are replaced with finalised and audited data.

This provisional estimate suggests that borrowing in the financial year ending March 2016 is less than half of that in the financial year ending March 2010; both in terms of £ billion (Table PSA2) and percentage of GDP (Table PSA5A).

PSNB ex has reduced since financial year ending March 2010, although remained higher than before the financial year ending March 2008 (April 2007 to March 2008) and the 2007 global financial market shock.

PSNB ex in the financial year ending March 2013 (April 2012 to March 2013) was higher than in the previous financial year largely as a result of the recording of an £8.9 billion payable capital transfer in April 2012, as recognition that the liabilities transferred from the Royal Mail Pension Plan exceeded the assets transferred.

Net borrowing for the financial year-to-date (April to July 2016)

Due to the volatility of the monthly data, the cumulative financial year-to-date borrowing figures provide a better indication of the progress of the public finances than the individual months.

In the financial year-to-date (April to July 2016), public sector net borrowing excluding public sector banks (PSNB ex) was £23.7 billion; an decrease of £3.0 billion, or 11.3% compared with the same period in 2015.

In this period, there was a £4.8 billion decrease in central government net borrowing, along with a £0.3 billion decrease in the net borrowing of public corporations and a £1.5 billion increase (or decrease in surplus) in local government net borrowing.

Over the same period, Bank of England (BoE) net borrowing was £0.6 billion higher than in the previous financial year-to-date, almost entirely due to Asset Purchase Facility (APF) transfers to central government. The combined net borrowing of central government and the BoE in the financial year-to-date was £4.2 billion lower than in the previous financial year.

Central government receipts for the financial year-to-date (April to July 2016) were £213.6 billion, an increase of £6.5 billion, or 3.1%, compared with the same period in the previous financial year. Of which:

- social (National Insurance) contributions increased by £2.4 billion, or 6.4%, to £39.3 billion
- VAT receipts increased by £1.1 billion, or 2.6%, to £43.6 billion
- interest & dividend payments increased by £1.0 billion, or 14.7%, to £8.0 billion
- Income Tax-related payments increased by £0.8 billion, or 1.5%, to £54.0 billion
- Corporation Tax increased¹ by £0.7 billion, or 4.4%, to £17.1 billion
- Stamp Duty on land and property increased by £0.3 billion, or 9.0%, to £4.0 billion

Central government expenditure (current and capital) for the financial year-to-date (April to July 2016) was £233.8 billion, an increase of £1.2 billion, or 0.5%, compared with the same period in the previous financial year. Of which:

- central government net investment (capital expenditure) increased by £1.5 billion, or 15.6%, to £11.4 billion; largely as a result of a fall in capital transfers from central government and other sectors, partially offset by an increase in gross capital formation
- net social benefits (mainly pension payments) increased by £0.2 billion, or 0.4%, to £68.2 billion; largely as a result of increases in state pension payments (within National Insurance Fund benefits) being partially offset by falls in public sector pension payments and social assistance payments along with increases in public sector pension contributions
- debt interest increased by £0.4 billion, or 2.5%, to £17.9 billion; of this £17.9 billion, £4.6 billion is the interest payable to the Bank of England Asset Purchase Facility on its gilt holdings (see Table PSA9 in Table PSA1 in the Public Sector Finances Tables 1 to 10: Appendix A dataset) which are PSNB ex neutral
- other current expenditure (mainly departmental spending) decreased by £1.0 billion, or 0.7%, to £136.4 billion; largely as a result of increases in departmental spending on goods and services, being offset by decreases in transfers to local government, contributions to the EU and other current grants paid by central government

Local government net borrowing (LGNB) for the financial year-to-date (April to July 2016) was estimated to be in surplus of £4.9 billion, a £1.5 billion decrease in surplus on the same period in the previous financial year. This decrease in surplus was largely due to decreases in grants received from central government, particularly in April, being partially offset by decreases in expenditure on goods and services.

Local government data for April to July 2016 are initial estimates. Most of the components are calculated by the Office for National Statistics (ONS) based on Office for Budget Responsibility (OBR) forecasts. Administrative source data are used for central government to local government transfers.

Detailed time series for each of the expenditure and revenue component series of local government net borrowing are presented in Tables PSA6G to 6K in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

Public corporations' net borrowing (PCNB) for the financial year-to-date (April to July 2016) was estimated to be £0.8 billion, a decrease of £0.3 billion on the same period in the previous financial year.

Public corporations data for April to July 2016 are provisional estimates calculated by ONS based on OBR forecasts.

Net borrowing in July 2016

In July 2016, public sector net borrowing excluding public sector banks (PSNB ex) was in surplus by £1.0 billion; this was £0.2 billion less surplus, or a fall of 16.5% compared with July 2015.

This increase in borrowing (or decrease in the surplus) was largely due to a decrease in central government net borrowing of £1.1 billion, partially offset by an increase in local government net borrowing of £0.9 billion.

In the same period, Bank of England (BoE) net borrowing was £0.6 billion higher than the same period in the previous financial year, almost entirely due to Asset Purchase Facility (APF) transfers to central government. The combined net borrowing of central government and the BoE in July 2016 was £0.5 billion lower than in July 2015.

The data for the latest month of every release contains some forecast data. The initial outturn estimates for the early months of the financial year contain more forecast data than other months, as profiles of tax receipts and departmental spending on OSCAR and local government spending are provisional. This means that the data for these months are typically more prone to revision than other months and can be subject to sizeable revisions in later months.

Central government receipts in July 2016 were £61.8 billion, an increase of £2.0 billion, or 3.4%, compared with July 2015. Of this:

- Interest & dividend payments increased by £0.8 billion, or 79.9%, to £1.8 billion
- Social (National Insurance) contributions increased by £0.6 billion, or 6.9%, to £9.7 billion
- Corporation Tax¹ increased by £0.6 billion, or 8.4%, to £7.5 billion
- Income Tax-related payments increased by £0.4 billion, or 1.9%, to £18.9 billion
- VAT receipts increased by £0.1 billion, or 1.3%, to £11.0 billion
- Tobacco Tax decreased by £0.5 billion, or 38.2%, to £0.8 billion

Central government expenditure (current and capital) in July 2016 was £58.4 billion, an increase of £0.8 billion, or 1.4%, compared with July 2015. Of this:

- other current expenditure (mainly departmental spending) increased by £0.6 billion, or 1.7%, to £34.1 billion; largely as a result of an increase in departmental spending on goods and services and contributions to the EU, partially offset by a decrease in current transfers to local government
- debt interest in July 2016 increased by £0.4 billion, or 10.6%, to £4.5 billion; of this £4.5 billion, £1.2 billion is the net interest paid to the Asset Purchase Facility Fund (APF) on its gilt holdings (see Table PSA9 in the Public Sector Finances Tables 1 to 10: Appendix A dataset) which are PSNB ex neutral
- central government net investment (capital expenditure) was £2.7 billion, equivalent to that paid in July 2015; largely as a result of increases in gross capital formation offset by capital transfers from central government to other sectors
- net social benefits (mainly pension payments) decreased by £0.2 billion, or 1.4%, to £17.2 billion; largely as a result of decreases in social assistance payments and public sector pension payments being partially offset with increases in state pension payments (within National Insurance Fund benefits)

Detailed time series for each of the expenditure and revenue component series of central government net borrowing are presented in Tables PSA6B to 6F in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

In July 2016, local government net borrowing (LGNB) was estimated to be £0.4 billion; an increase of £0.9 billion compared with July 2015.

Local government data for July 2016 are initial estimates. Most of the components are calculated by ONS based on OBR forecasts. Administrative source data are used for central government to local government transfers.

Detailed time series for each of the expenditure and revenue component series of local government net borrowing are presented in Tables PSA6G to 6K in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

In July 2016, it was estimated that public corporations' net borrowing (PCNB) was £0.2 billion, a decrease of £0.1 billion compared with July 2015.

Public corporations data for July 2016 are provisional estimates calculated by ONS based on OBR forecasts.

Notes:

1. The first payment under the Bank Corporation Tax surcharge scheme was received in July 2016 and this payment of £0.3 billion was recorded under central government receipts within Corporation Tax.

5 . The latest public sector net debt position

Public sector net debt excluding public sector banks (PSND ex) represents the amount of money the public sector owes to UK private sector organisations and overseas institutions, largely as a result of government financial liabilities on the bonds (gilts) and Treasury bills it has issued.

While deficit represents the difference between income and spending over a period of time, debt represents the total amount of money owed at a point in time. This debt has been built up by successive government administrations over many years. When the government borrows (that is, runs a deficit), this adds to the debt total. So reducing the deficit is not the same as reducing the debt.

At the end of July 2016, PSND ex stood at £1,604.2 billion; an increase of £35.3 billion compared with July 2015. This increase in net debt is a result of:

- £72.3 billion of public sector net borrowing
- plus £8.3 billion in timing differences between cash flows for gilt interest payments and the accrued gilt interest flows
- less £45.3 billion in net cash transactions related to acquisition or disposal of financial assets of equivalent value (for example loans) and timing of recording

At the end of July 2016, the provisional estimate of PSND ex as a percentage of GDP stood at 82.9%; a decrease of 0.9 percentage points compared with July 2015. This is the second successive month of debt falling on the year as a percentage of GDP and indicates that GDP is currently increasing (year-on-year) faster than net debt excluding public sector banks. However, care should be taken when inferring trends from only 2 months' data, especially given the provisional nature of centred GDP estimates for the latest month.

The methodology that underpins our presentation of fiscal aggregates as GDP ratios can be found in [The use of GDP in public sector fiscal ratio statistics](#). Earlier this year we sought user feedback on these methods and as a result we will be making, in the September Public Sector Finances bulletin, a minor methodology change to the way that we estimate GDP for periods where GDP has not yet been published. More information is available in Section 10; Recent events and methodological changes.

All else being equal, it is estimated that the impact of this methodology change would be to revise the PSND ex at the end of July 2016 from 82.9% of GDP to 83.0% of GDP.

Figure 5 illustrates public sector net debt excluding banking groups (PSND ex) from the financial year ending March 1994 to date.

Figure 5: Public sector net debt excluding public sector banks; the financial year ending 1994 to financial year ending 2017¹

UK, all data excluding public sector banks

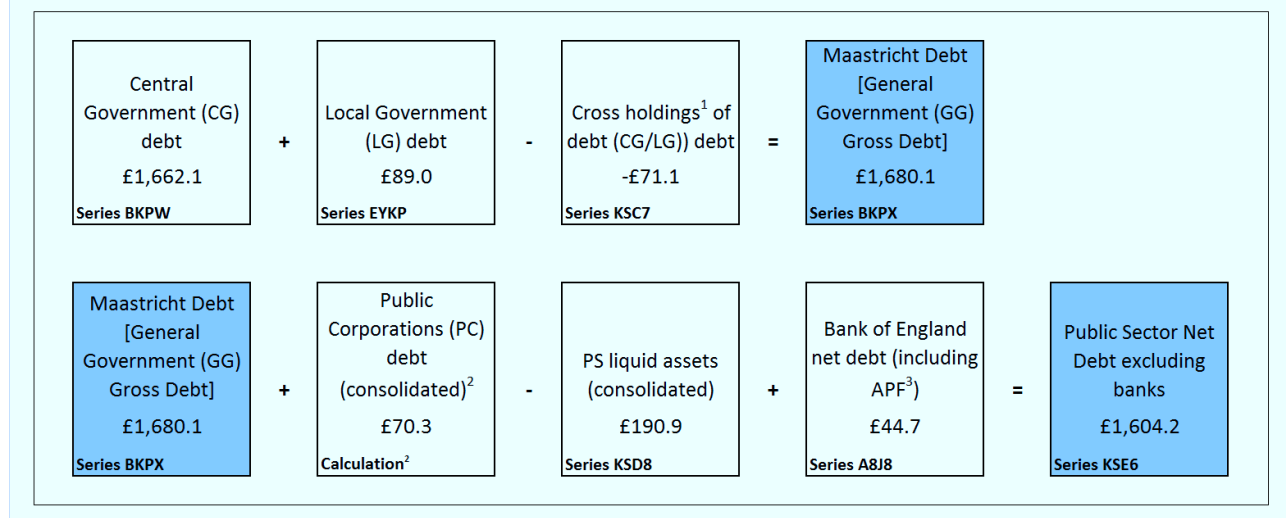

The increases in debt between the financial year ending March 2009 (April 2008 to March 2009) and the financial year ending March 2011 (April 2010 to March 2011) were larger than in the early part of the decade, as the economic downturn meant public sector net borrowing excluding public sector banks (PSNB ex) increased. Since then it has continued to increase but at a slower rate.

For the purposes of UK fiscal policy, net debt is defined as total gross financial liabilities less liquid financial assets, where liquid assets are cash and short-term assets which can be released for cash at short notice and without significant loss. These liquid assets mainly comprise foreign exchange reserves and bank deposits.

Figure 6 presents public sector debt (excluding public sector banks) at the end of July 2016 by sub-sector. Time series for each of these component series are presented in Tables PSA8A to D in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

Figure 6: Sub-sector split of public sector net debt excluding public sector banks at July 2016 (£ billion)

Changes in net debt between 2 points in time are normally similar to the net cash requirement for the intervening period, though the relationship is not an exact one because the net cash requirement reflects actual prices paid, while the net debt is at nominal prices. For instance, gilts are recorded in net debt at their redemption (or face) value, but they are often issued at a different price due to premia or discounts being applied. The net cash requirement will reflect the actual issuance and redemption prices, but net debt only ever records the face (or nominal) value.

Net cash requirement is discussed further in Section 8 of this bulletin.

6 . Net borrowing and debt statistics compared with OBR forecast

The [Office for Budget Responsibility \(OBR\)](#) normally produces forecasts of the public finances twice a year (normally in March and December). The latest [OBR forecast](#) was published on 16 March 2016.

Figure 7, Table 3 and Table 4 enable users to compare emerging data against the OBR forecasts. Caution should be taken when comparing public finance data with OBR figures for the full financial year, as data are not finalised until after the financial year ends. Initial estimates soon after the end of the financial year can be subject to sizeable revisions in later months. In addition, in-year timing effects on spending and receipts can affect year-to-date comparisons with previous years.

There can also be some methodological differences between OBR forecasts and outturn data. In its latest publication, OBR published a table within their [Economic and Fiscal Outlook Supplementary Fiscal Tables – March 2016](#) titled “Table: 2.45 Items included in OBR forecasts that ONS have not yet included in outturn”.

Figure 7 illustrates the public sector net borrowing excluding public sector banks (PSNB ex) for the fifth provisional estimate of the complete financial year ending March 2016 (April 2015 to March 2016), along with the first provisional estimate of the current financial year-to-date (April to July 2016). These are not final figures and may be revised as provisional data are replaced with finalised and audited data.

Figure 7: Cumulative public sector net borrowing by month

UK, all data excluding public sector banks

Figure 7: Cumulative public sector net borrowing by month

UK, all data excluding public sector banks

Source: Office for National Statistics

Notes:

1. For the financial year ending 2016 (April 2015 to March 2016) and the financial year ending 2017 (April 2016 to March 2017).
2. OBR full financial year forecast for public sector net borrowing excluding public sector banks from March 2016 Economic and Fiscal Outlook (EFO).

The fifth provisional estimates suggest that in the financial year ending March 2016 (April 2015 to March 2016), borrowing fell by £16.5 billion to £75.3 billion, compared with the previous financial year. By comparison, the OBR forecast for the financial year ending March 2016 (April 2015 to March 2016) was £72.2 billion which is £3.1 billion below the latest outturn estimate.

In the current financial year-to-date (April to July 2016), public sector net borrowing (excluding public sector banks) decreased by £3.0 billion to £23.7 billion compared with the same period in 2015.

OBR have estimated that the public sector will borrow £55.5 billion during the financial year ending March 2017 (April 2016 to March 2017); a reduction of £19.8 billion on the provisional outturn for the financial year ending March 2016 (April 2015 to March 2016).

Table 3 compares the year-to-date (April to July 2016) estimate of the main public sector fiscal aggregates with the same period in the previous financial year. It contrasts these data with the percentage change between the latest full year outturn data for the financial year ending March 2016 (April 2015 to March 2016) and the OBR forecast for the financial year ending March 2017 (April 2016 to March 2017), as published in March 2016.

Table 3: Public sector latest outturn estimates vs Office for Budget Responsibility (OBR) forecasts

UK, excluding public sector banks

£ billion¹ (not seasonally adjusted)

	Financial year-to-date ⁷		Increase /Decrease %	Full financial year ⁸		
	2016 /17 ⁸	2015 /16 ⁸		2016/17 OBR Forecast ⁹	2015/16 Outturn	Forecast Increase /Decrease %
Current budget deficit ²	15.5	19.4	-19.7	19.1	41.5	-54.0
Net investment ³	8.2	7.4	10.6	36.4	33.8	7.6
Net borrowing ⁴	23.7	26.7	-11.3	55.5	75.3	-26.3

Net debt as a percentage of GDP ⁶	82.9	83.8	NA	82.6	83.7	NA

Source: Office for National Statistics

Notes:

1. Unless otherwise stated.
2. Current budget deficit is the difference between current expenditure (including depreciation) and current receipts.
3. Net investment is gross investment (net capital formation plus net capital transfers) less depreciation.
4. Net borrowing is current budget deficit plus net investment.
5. Net debt is financial liabilities (for loans, deposits, currency and debt securities) less liquid assets.
6. GDP at current market price.
7. Financial year-to-date refers to the period from April to July
8. 2016/17 refers to financial year ending in March 2017 and 2015/16 refers to financial year ending in March 2016.
9. All OBR figures are from the OBR Economic and Fiscal Outlook published in March 2016.

Table 4 presents the fourth provisional estimate of public sector net borrowing split by sub-sector for the complete financial year ending March 2016 (April 2015 to March 2016) along with the corresponding OBR forecast; published in Table 2.38 (General government transactions by economic category) of the [Economic and Fiscal Outlook Supplementary Fiscal Tables - March 2016](#).

	ONS	OBR	Difference
Central government	70.4	69.3	1.1
Local government	4.4	3.8	0.6
Public corporations ²	0.4	-1.0	1.4
Public sector	75.3	72.2	3.1

Source: Office for National Statistics (ONS) and The Office of Budget Responsibility (OBR)

Notes:

1. Full financial year ending 2016 (April 2015 to March 2016)
2. Includes Bank of England

On the same day as this bulletin is released, the OBR publishes a commentary on the latest figures and how these reflect on its forecasts. The OBR provides this commentary to help users interpret the differences between the latest outturn data and the OBR forecasts by providing contextual information about assumptions made during the OBR's forecasting process.

7 . International comparisons of borrowing and debt

The UK government debt and deficit for Eurostat statistical bulletin is published quarterly (in January, April, July and November each year), to coincide with when the UK and other European Union member states are required to report on their deficit (or net borrowing) and debt to the European Commission.

On 15 July 2016, we published the latest [UK Government Debt and Deficit for Eurostat statistical bulletin](#): The data used to produce the 15 July 2016 publication are consistent with those used in the production of the public sector finances statistical bulletin published on 21 June 2016.

In the publication of 15 July 2016 we reported that:

- general government deficit (Maastricht borrowing) in the financial year ending March 2016 (April 2015 to March 2016) was £74.5 billion, equivalent to 4.0% of GDP; a decrease of £16.2 billion compared with the financial year ending March 2015
- general government gross debt (Maastricht debt) at the end of March 2016 was £1,649.2 billion, equivalent to 87.7% of GDP; an increase of £47.5 billion compared with the end of the financial year ending March 2015

The latest public sector finances data in this bulletin report that:

- general government net borrowing in the financial year ending March 2016 (April 2015 to March 2016) was £74.9 billion, equivalent to 4.0% of GDP; an upward revision of £0.4 billion since the 15 July 2016 publication
- general government gross debt at the end of March 2016 was £1,649.5 billion, equivalent to 87.8% of GDP, an upward revision of £0.3 billion or 0.1 percentage point of GDP since the 15 July 2016 publication

It is important to note that the GDP measure, used as the denominator in the calculation of the debt ratios in the UK government debt and deficit for Eurostat statistical bulletin, differs from that used within the public sector finances statistical bulletin.

An article, [The use of GDP in fiscal ratio statistics](#), explains that for debt figures reported in the monthly public sector finances, a 12 month GDP total centred on the month is employed, while in the UK government debt and deficit for Eurostat statistical bulletin the total GDP for the preceding 12 months is used.

8 . Public sector net cash requirement

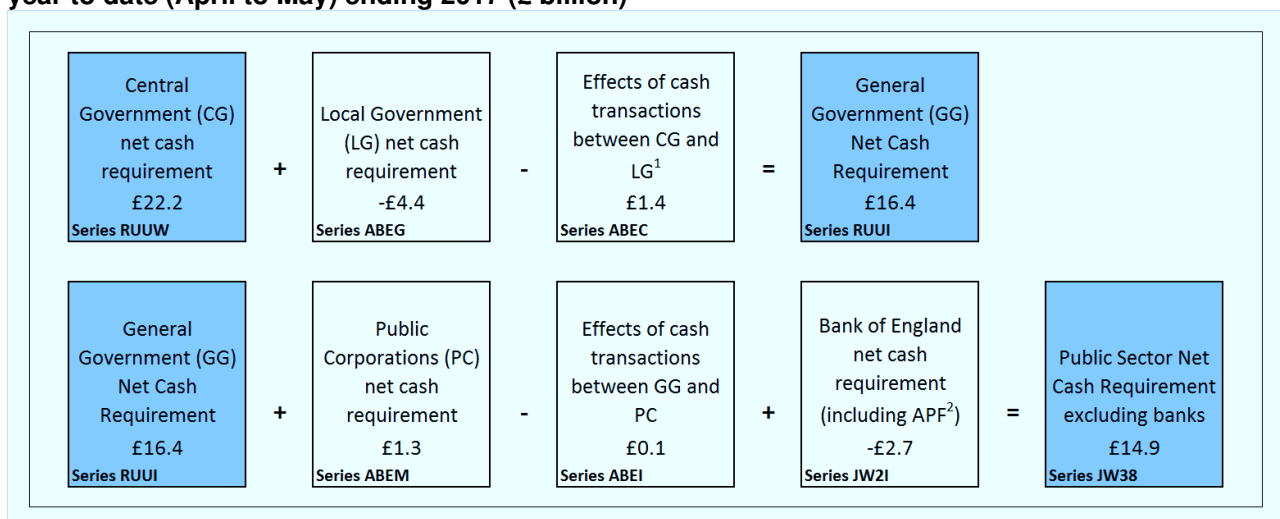

Net cash requirement is a measure of how much cash the government needs to borrow (or lend) to balance its accounts. In very broad terms, net cash requirement equates to the change in the level of debt.

Central government net cash requirement is reconciled against the change in central government net debt in Table REC3 in the Public Sector Finances Tables 1 to 10: Appendix A dataset. The public sector net cash requirement excluding public sector banks (PSNCR ex) follows a similar trend to that of public sector net borrowing by peaking in the financial year ending March 2010, though in recent years transfers from the Asset Purchase Facility have had a substantial impact on PSNCR ex but are PSNB ex neutral.

PSNCR ex in the current financial year-to-date (April to July 2016) was £14.9 billion; £4.8 billion, or 24.4% lower than in the same period in 2015.

Figure 8 presents public sector cash requirement by sub-sector for the financial year-to-date (April to July 2016). Time series for each of these component series are presented in Table PSA7A in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

Figure 8: Sub-sector split of public sector net cash requirement excluding public sector banks, financial year to date (April to May) ending 2017 (£ billion)

Central government net cash requirement (CGNCR) is a focus for some users, as it provides an indication of how many gilts (government bonds) the Debt Management Office may issue to meet the government's borrowing requirements.

In the current financial year-to-date (April to July 2016), CGNCR was £22.2 billion; £5.1 billion, or 18.7% lower than in the same period in 2015.

Cash transfers from the Asset Purchase Facility (APF) were £0.6 billion lower in the current financial year-to-date (April to July 2016), than in the same period in the previous financial year-to-date. Without the impact of these transfers, CGNCR would have been £4.5 billion lower in the current financial year-to-date than in the same period in the previous year.

Recent events impacting on CGNCR

For the current financial year, ending March 2017 (April 2016 to March 2017) the following event has reduced the CGNCR to date:

- the transfers between the Bank of England Asset Purchase Facility Fund (BEAPFF) and central government

In the financial year ending March 2016 (April 2015 to March 2016) the following events reduced the CGNCR:

- the transfers between the Bank of England Asset Purchase Facility Fund (BEAPFF) and central government
- the sale of shares in Lloyds Banking Group
- the sale of shares in Eurostar
- the sale of shares in Royal Mail
- the sale of shares in Royal Bank of Scotland
- the sale of UK Asset Resolution Limited (UKAR) assets
- the re-imbusement of support payments made to Icesave

In the financial year ending March 2015 (April 2014 to March 2015) the following events reduced the CGNCR:

- the transfers between the BEAPFF and central government
- the sale of shares in Lloyds Banking Group

In the financial year ending March 2014 (April 2013 to March 2014) the following events reduced the CGNCR:

- the transfers between the BEAPFF and central government
- the sale of shares in Lloyds Banking Group
- the sale of shares in Royal Mail

In the financial year ending March 2013 (April 2012 to March 2013) the following events reduced the CGNCR:

- the transfers between the BEAPFF and central government
- the Royal Mail Pension Plan transfer and subsequent sale of assets
- the transfer of the Special Liquidity Scheme final profits between Bank of England and central government
- the 4G Spectrum sale

Public sector net cash requirement

Although the central government net cash requirement is the largest part of the public sector net cash requirement excluding public sector banks (PSNCR ex), the total public sector net cash requirement (PSNCR) can be very different. The reason is that the PSNCR includes the net cash requirement of the public sector banking groups. In recent years, the public sector banking groups have recorded large cash surpluses which have had a substantial impact on the public sector net cash requirement.

9 . Central government receipts and expenditure

Current receipts

The government receives income mainly from taxes but also from National Insurance contributions, interest and dividends, fines and rent.

As cash receipts are generally accrued back to earlier periods when the economic activity took place, the first monthly estimate for receipts is by nature provisional, and must include a substantial amount of forecast data.

Central government receipts follow a strong cyclical pattern over the year, with high receipts in April, July, October and January due to quarterly Corporation Tax returns being accrued to these months.

In both January and July (to a lesser extent) accrued receipts are particularly high due to receipts from quarterly Corporation Tax combining with those from Income Tax self-assessment. The revenue raised through Income Tax self-assessment, as well as primarily affecting January and July receipts, also tends to lead to high receipts in the following month (March and November respectively), although to a lesser degree.

Pay as you earn (PAYE) tends to vary little throughout the financial year on a monthly basis (excluding bonus months).

In recent years transfers from both the Bank of England Asset Purchase Facility Fund (BEAPFF) and the Special Liquidity Scheme (SLS) have boosted central government receipts. These transfers to central government have no impact on public sector borrowing due to the central government receipts being offset by the payments from the Bank of England.

Current expenditure

Current expenditure is the government's spending on activities such as: social benefits (mainly pension payments), interest payments and other current expenditure including government departmental spending (excluding spending on capital assets).

Trends in central government current expenditure can be affected by monthly changes in debt interest payments, which can be volatile as they depend on the movements in the Retail Prices Index. Excluding debt interest makes this statistic less volatile.

There is however one regular peak in net social benefits, which are higher in November than in other months due to the annual payment of the winter fuel allowance.

Year-on-year growth in net social benefits is affected by the uprating of benefits to compensate for inflation based on the Consumer Prices Index (CPI).

For recent years these are: 2.7% in the financial year ending March 2015; 1.2% in the financial year ending March 2016 and -0.1% for the financial year ending March 2017 (meaning that the rates have remained frozen). These apply to benefits for pensioners (apart from the State Pension). Most benefits for people of working age are frozen for the financial year ending March 2017.

However, for State Pensions, the largest component within net social benefits, there is a “triple guarantee” that means that they are uprated by the highest of the CPI, increases in earnings or 2.5%. For the financial year ending March 2017, they were uprated by the rise in annual earnings which was 2.9%.

It can be difficult to compare the profile of monthly central government expenditure even when excluding both debt interest and net social benefits.

For the 4 years since the financial year ending March 2014, there have been continual changes to the profile of central government grants to local government.

In the financial year ending March 2016, the Revenue Support Grant (the main general grant paid to local authorities in England) was paid with a third of the total in April and the remainder in equal instalments in all the other months, whereas, in the financial year ending March 2015, more than half of it was paid in April with the bulk of the remaining balance paid in February and March. This financial year (ending March 2017) the monthly pattern of grants has changed again and is much flatter — with 10% being paid in April and the remainder flat though the year. The overall level is also lower than last year.

Current budget deficit

The gap between current expenditure and current receipts (having taken account of depreciation) is referred to as the current budget. When current expenditure is greater than current receipts (income), the public sector runs a current budget deficit.

In July 2016, the central government current budget deficit was in surplus by £4.4 billion, an increase in surplus of £1.2 billion, or 36.1% compared with July 2015.

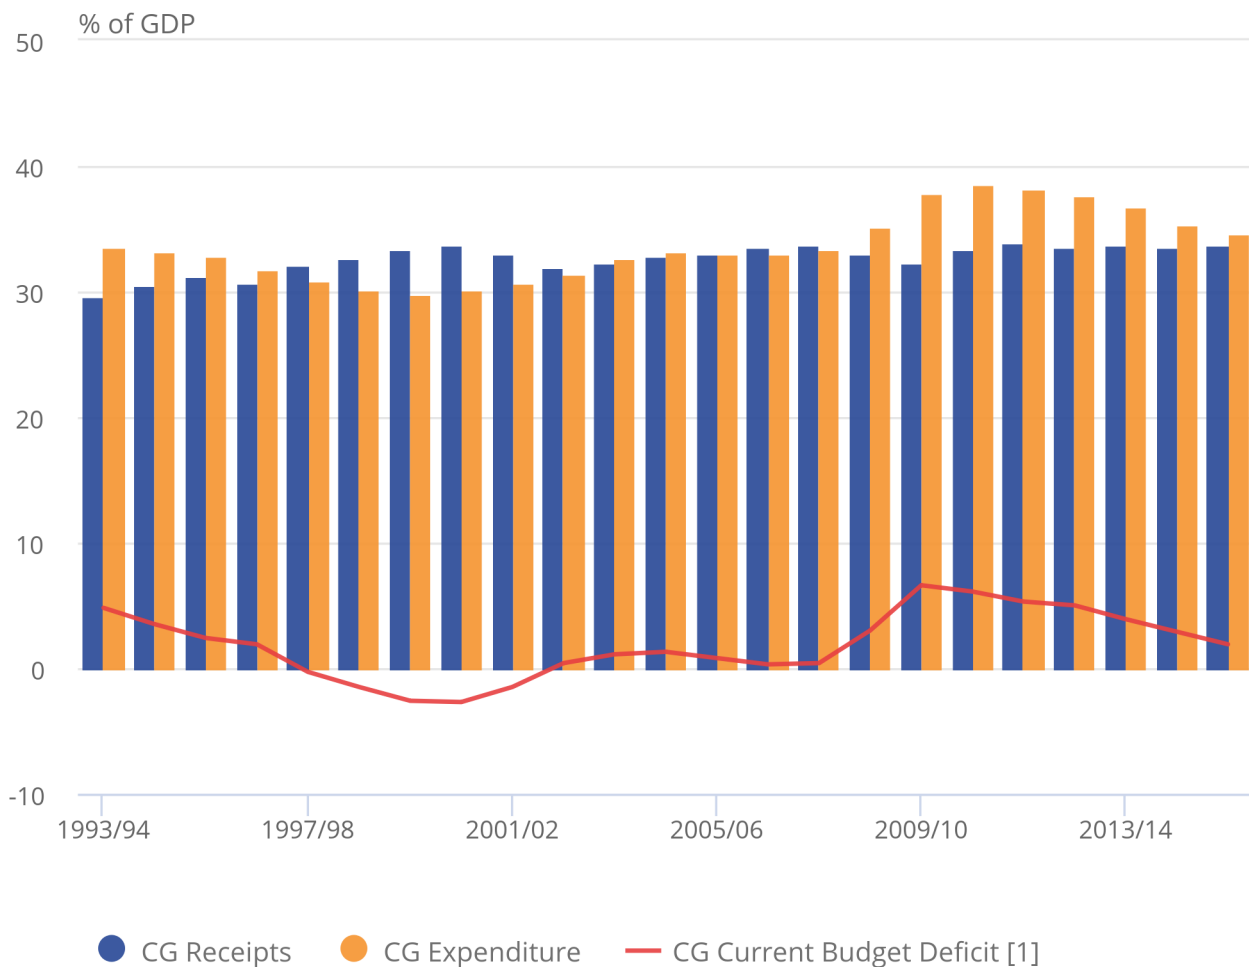

The central government current budget deficit in the current financial year-to-date (April to July 2016) was £15.4 billion; which was £6.4 billion, or 29.2% lower than in the same period in 2015.

Figure 9 illustrates that the central government current budget deficit (as a percentage of GDP) has reduced since the financial year ending March 2010 (April 2009 to March 2010), but is still larger than before the global financial shock.

Figure 9: Central government receipts, expenditure and current budget deficit¹ as a percentage of GDP by financial year; the financial year ending 1994 to the financial year ending 2016²

UK, all data excluding public sector banks

Figure 9: Central government receipts, expenditure and current budget deficit¹ as a percentage of GDP by financial year; the financial year ending 1994 to the financial year ending 2016²
UK, all data excluding public sector banks

Source: Office for National Statistics

Source: Office for National Statistics

Notes:

1. Current budget deficit is receipts minus expenditure but also includes the effects of depreciation.
2. Financial year 2015/16 represents the financial year ending 2016 (April 2015 to March 2016).

In recent years the current budget has been in deficit in most months. January and July tend to be surplus months as these are the 2 months with the highest receipts.

Net investment

Net investment represents the government's spending on capital assets, like infrastructure projects, property and IT equipment, both as grants and by public sector bodies themselves minus capital receipts from the sale of capital assets.

In the financial year-to-date (April to July 2016), central government's net investment was £11.4 billion. This represents an increase of £1.5 billion, or 15.6%, on the same period in the previous year and is largely due to a decrease in capital transfers to central government from other sectors.

Central government net investment is difficult to predict in terms of its monthly profile as it includes some large capital grants (such as those to local authorities and education institutions) and can include some large capital acquisitions or disposals, all of which vary from year to year. Net investment in the last quarter of the financial year is usually markedly higher than that in the previous 3 quarters.

Central government net investment includes the direct acquisition minus disposal of capital assets (such as buildings, vehicles, computing infrastructure) by central government. It also includes capital grants to and from the private sector and other parts of the public sector. Capital grants are varied in nature and cover payments made to assist in the acquisition of a capital asset, payments made as a result of the disposal of a capital asset, transfers in ownership of a capital asset and the unreciprocated cancellation of a liability (that is conceding a debt will not be repaid).

The sum of net investment (spending on capital less capital receipts) and the current budget deficit constitute net borrowing.

10 . Recent events and methodological changes

Classification decisions

Each quarter we publish a [forward workplan](#) outlining the classification assessments we expect to undertake over the coming 12 months. To supplement this, each month a [classifications update](#) is published which announces classification decisions made, and includes expected implementation points (for different statistics) where possible.

Classification decisions are reflected in the public sector finances at the first available opportunity and, where necessary outlined in this section of the statistical bulletin.

Bank Corporation Tax surcharge

In July 2015, HM Revenue and Customs (HMRC) published [details of a surcharge to be levied on profits of banking companies](#) in accounting periods beginning on or after 1 January 2016.

The measure imposes a surcharge of 8% on the profits of banking companies. The profits will be calculated and reported on the same basis as for Corporation Tax, but with some reliefs added back.

The first payment under the Bank Corporation Tax surcharge scheme was received in July 2016 and this payment of £0.3 billion was recorded under central government receipts within Corporation Tax.

Local government cash data

We have been working with the Department for Communities and Local Government to review the methodology used to calculate local government net cash requirement (LGNCR). The local government cash data are collected from all local authorities in the UK on a quarterly basis and from a sample of local authorities on a monthly basis. The outcome of the review is a new method for calculating many of the component series, which makes better use of the available data at any given point in time.

We will introduce this new method in the August 2016 bulletin (released on 21 September 2016) and revisions will be applied from April 2012 onwards. As a result, in some years LGNCR will increase and in some years it will be reduced.

We estimate that the change to LGNCR (and consequently public sector net cash requirement) will range from an increase of £0.2 billion in the financial year ending March 2014 to a decrease of less than £0.1 billion in the financial year ending March 2013. In the current financial year-to-date we estimate that net cash requirement will increase by £0.8 billion.

These changes to cash data will have an impact on the level of public sector net debt (both PSND and PSND ex). We estimate that:

- PSND and PSND ex at the end of the financial year ending March 2013 will decrease by around £0.1 billion
- PSND and PSND ex at the end of the financial year ending March 2014 will increase by around £0.2 billion
- PSND and PSND ex at the end of the financial year ending March 2015 will decrease by around £0.1 billion
- PSND and PSND ex at the end of the financial year ending March 2016 will decrease by around £0.4 billion
- PSND and PSND ex at the end of the financial year-to-date ending June 2016 will increase by around £0.7 billion

Changes to net debt

In December 2014, we introduced a new table (REC3), as an experimental statistic, showing the relationship between central government net cash requirement and central government net debt.

We improved the detail of this table in June 2015, but advised you that the Office for National Statistics (ONS) and HM Treasury were continuing to work together to fully understand the data sources feeding into the central government net cash requirement and net debt so as to provide you with clarity on non-cash drivers to net debt and as a quality assurance tool for the monthly production of this bulletin.

This work has now reached a conclusion and we plan to introduce the findings of this work in the August 2016 edition of the bulletin due to be published on 21 September 2016.

Implementing the findings of this investigative work will result in a number of changes to public sector net debt (both PSND and PSND ex). The major changes are:

- inclusion of bonds issued by London Continental Railways, now held by Department for Transport; currently these are missing from central government net debt but partially included (wrongly) in public corporations' net debt
- inclusion of repurchase agreements (repos) between the official reserves and overseas institutions as well as non-bank UK institutions; currently only the liabilities relating to repos between the official reserves and UK banks are included in PSND and PSND ex
- adjustments to National Savings and Investments (NS&I) outstanding balances to remove any liabilities that had not crystallised at the end of the reporting period; currently some liabilities which crystallise in the days immediately following the reporting month are being included in PSND and PSND ex

At this stage of the work, it is difficult to be precise about the impact of these changes on PSND and PSND ex, but initial indications are that as a result of these methodological improvements:

- PSND and PSND ex at the end of the financial year ending March 2016 will increase by around £8.5 billion
- PSND and PSND ex at the end of the financial year ending March 2015 will increase by around £3.5 billion
- PSND and PSND ex at the end of the financial year ending March 2014 will increase by around £1.5 billion

It should be noted that central government net debt (CGND) will be revised upwards by approximately £1.5 billion more than PSND and PSND ex. This is because the changes to London Continental Railways bonds largely net out in PSND and PSND ex but not in CGND.

In addition to the above changes to net debt there may be some much smaller revisions to central government net cash requirement of no more than £100 million a year.

Additional changes to net debt as a percentage of GDP

Following our [user consultation](#) concerning the use of public sector fiscal statistics presented as ratios of gross domestic product (GDP), we will be implementing a minor methodological change to the way we estimate GDP for periods where GDP has not yet been published. This methodology change is to move from the current method of using forecasted annual growth rates published by the Office for Budget Responsibility (OBR) with OBR's forecasted quarterly growth rates. This methodology change will be implemented in the PSF bulletin during autumn 2016.

All else being equal, it is estimated that the impact of this methodology change would be to revise the PSND ex at the end of July 2016 from 82.5% of GDP to 82.6% of GDP.

Bank of England Asset Purchase Facility Fund (BEAPFF)

The BEAPFF (often abbreviated to APF) currently holds government securities (gilts) on which it earns interest, and pays interest on the reserves created by the Bank of England to finance it. These interest flows are reflected in both the public sector net cash requirement (PSNCR ex) and the public sector net borrowing (PSNB ex) although the interest received on gilts is internal to the public sector whereas the financing interest paid external. In addition to these interest flows there are regular transfers of excess cash in the APF to the Exchequer. These flows are internal to the public sector and so do not affect PSNB ex.

In July 2016, there was £1.1 billion transferred from the BEAPFF to HM Treasury, bringing the total money transferred to HM Treasury under the APF scheme to £5.0 billion in this financial year-to-date (April to July 2016).

The Bank of England entrepreneurial income for the financial year ending March 2016 (April 2015 to March 2016) was calculated as £11.9 billion. This is the total amount of dividend transfers that can impact on central government net borrowing in the financial year ending March 2017 (April 2016 to March 2017).

The net liabilities of the APF increase public sector net debt (PSND ex) as shown in Table 8D in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

On 3 August 2016, the [Monetary Policy Committee](#) (MPC) voted to introduce a package of measures to support the economy. This package comprised:

- a 25 basis point cut in Bank Rate to 0.25%; a new Term Funding Scheme to reinforce the pass-through of the cut in Bank Rate
- the purchase of up to £10 billion of UK corporate bonds an expansion of the asset purchase scheme for UK government bonds of £60 billion

We will consider the treatment of the first 2 components of this economic package in the public sector finances, in accordance with international statistical rules and the principles laid down during the 2013 PSF Review.

The £60 billion expansion of the asset purchase scheme will take the total stock of BEAPFF government bond purchases to £435 billion. The flows and liabilities related to these bonds will be recorded in the same way as for the existing bond holdings. For more detail of transactions relating to the Asset Purchase Facility, see Table PSA9 in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

Lloyds Banking Group share sales

In recent years the government has entered a programme of selling shares in publicly owned organisations. For most share sales, the proceeds will reduce the central government net cash requirement (CGNCR) and public sector net debt (PSND) by an amount corresponding to the cash raised from the sale but have no impact on public sector net borrowing.

On 17 September 2013, the UK government began selling part of its share holdings in Lloyds Banking Group (LBG). A further share sale on 23 and 24 March 2014 meant that the UK government surrendered, in total, a 13.5% stake in the institution, a quantity sufficient to lead to LBG being re-classified from a public sector body to a private sector body.

Based on the currently available information, we have recorded no LBG share sales in July 2016, though this may be revised at a later date.

Since December 2014, the government has continued reducing its shareholding in LBG via a pre-arranged trading plan, raising an estimated total of £16.2 billion to date.

In January 2016, the government [announced that it would extend Lloyds' trading plan for a further 6 months](#) (ending no later than 30 June 2016). It stated that the current trading plan has reduced the government's remaining stake in Lloyds to around 9%.

Housing associations

The reclassification of English private registered providers of social housing (referred to in this bulletin as housing associations) from the private to the public corporation sector was reflected in public sector finances for the first time in the [January 2016 statistical bulletin](#). This reclassification, [announced on 30 October 2015](#), affects over 1,500 bodies providing social housing and applies back to July 2008 when the controls in the Housing and Regeneration Act 2008 came into force.

It is important to realise that current estimates of the impact of the reclassification of housing associations are preliminary estimates which may be updated when new data become available or methodological improvements are made. At present, we are actively seeking alternative data sources to investigate the impact of smaller providers on net borrowing, net cash requirement and net debt.

We are also doing further work to test the assumptions that have been made in compiling the estimates. These were:

- all housing association debt is assumed to be held by the private sector – the [Quarterly Survey of Private Registered Providers](#) for March 2015 showed that banks, building societies and capital markets contributed 99% to agreed sources of funding
- the Global Accounts are collected for the entire financial year – monthly transactions were estimated by dividing the financial year figure by 12
- providers which own less than 250 properties (less than 2% of the total stock) are assumed to have no net debt and not be investing in new properties
- providers owning or managing between 250 and 1,000 properties are assumed to have the same gross debt per 1,000 properties as those owning or managing between 1,000 and 2,500 homes
- the relative impact of small providers on the accounts is assumed to be constant between financial year ending March 2009 and financial year ending March 2015

This reclassification is being introduced in public sector finances before implementation in the Quarterly National Accounts and Blue Book publications. Any work to improve the methods and data sources used in these estimates will be reflected in the National Accounts publications at the time the reclassification is implemented.

11 . Revisions since previous bulletin

In publishing monthly estimates, it is necessary that a range of different types of data sources are used. A summary of the different sources used and the implications this has for data revisions is provided in the document [Sources summary and their timing](#).

The [Public Sector Finances Revision Policy](#) provides information of when users of the statistics published in the public sector finances and Government Deficit and Debt under the Maastricht Treaty statistical bulletins should expect to see methodological and data related revisions.

More detail of the methodology and sources employed can be found in the [Public Sector Finances Methodological Guide](#).

Revisions tend to be the result of both updated data sources and methodology changes. This month the reported revisions are solely the result of updated data sources.

Table 5 summarises revisions between the data contained in this bulletin and the previous publication.

Public sector net borrowing excluding public sector banks (PSNB ex)

Revisions to PSNB ex are largely limited to the current financial year-to-date (April to June 2016).

Revisions to net borrowing in the current financial year-to-date (April to June 2016)

When considering the revisions to the current financial year-to-date we have previously noted that data for the initial outturn estimates for the early months of the financial year, particularly April, contain more forecast data than other months as profiles of tax receipts, along with departmental and local government spending, are still provisional. This means that the data for these months are typically more prone to revision than other months and can be subject to sizeable revisions in later months.

The provisional estimate of PSNB ex in the current financial year-to-date has been revised down by £0.9 billion as a result of a £1.4 billion decrease in central government borrowing, partially offset by a £0.4 billion increase in local government net borrowing.

The estimates of the central government current receipts (including taxes) were collectively revised down by £0.4 billion. Of this, estimates of both VAT and interest & dividend payments have been increased by £0.5 billion and £0.2 billion respectively; while Income Tax and social contributions (National Insurance) were revised downward by £0.6 billion and £0.7 billion respectively.

Over the same period, estimates of current expenditure have been revised down by £0.9 billion, largely due to decreases in the estimate of departmental spending on goods and services.

The downward revisions to both receipts and expenditure meant that the current budget deficit in the financial year-to-date reduced by £0.6 billion.

Downward revisions to capital transfers from central government to other sectors and gross capital formation of £0.2 billion and £0.6 billion respectively, resulted in a decrease of a £0.8 billion to both the estimate of net investment.

The decrease of £0.6 billion in the current account combined with the £0.8 billion reduction in the capital account meant that central government net borrowing in the financial year-to-date was reduced by £1.4 billion compared with the previous estimate published on 21 July 2016.

The estimate of local government net borrowing (LGNB) in the current financial year-to-date has been revised up by £0.4 billion, due to provisional estimates of both capital and current transfers from central to local government being replaced by revised estimates.

Public sector net debt excluding public sector banks (PSND ex)

PSND ex at the end of June 2016 was revised downward by £2.1 billion, as new data replaced previous forecast data for Network Rail and Bank of England.

Public sector cash requirement excluding public sector banks (PSNCR ex)

In the current financial year-to-date (April to June 2016), PSNCR ex was revised down by £ 3.5 billion, while in the financial year ending March 2016 (April 2015 to March 2016), PSNCR ex was revised upward by £2.0 billion.

The changes to PSNCR ex were largely due to new data supplied by UK Asset Resolution Limited (UKAR) covering both Northern Rock Asset Management and Bradford & Bingley and the resulting impact on central government net cash requirement (CGNCR).

In the current financial year-to-date, CGNCR was revised down by £ 3.6 billion and in the financial year ending March 2016 it was revised upward by £2.0 billion.

Table 5: Revisions between this bulletin and the previous bulletin

UK, previous bulletin refers to the PSF bulletin published on 21 July 2016

1. Unless otherwise stated.
2. Central government.
3. Local government.
4. Non-financial public corporations.
5. Bank of England.
6. Public sector net borrowing excluding public sector banks.
7. Public sector net debt excluding public sector banks.
8. Public sector cash requirement excluding public sector banks.
9. 2015/16 represents financial year ending 2016 (April 2015 to March 2016).
10. ytd = Year-to-date, April to June 2016.

To provide an insight into the drivers of the historical revisions between publications, this bulletin presents 3 revisions tables:

- Table PSA1R complements PSA1 and provides a revisions summary (between the current and previous publication) to headline statistics in this release
- Table PSA2R complements PSA2 and provides the revisions (between the current and previous publication) to net borrowing by sector
- Table PSA6R complements PSA6B and provides the revisions (between the current and previous publication) to the components of central government net borrowing

Tables PSA1R and PSA6R are published in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

In addition, the Revisions analysis for Public Sector Finances: Appendix C dataset presents a statistical analysis of several main components of the central government account (current receipts, current expenditure, net borrowing and net cash requirement) to determine whether their average revisions are statistically significant.

12 . New to the bulletin

Non-market output

As announced in the public sector finance: April 2016 bulletin, to accommodate the [subdivision of non-market output](#) dependant on whether or not a payment is made to government, we have made a small change to the presentation of data in Tables PSA6C, PSA6H and PSA6J.

In Table PSA6C, series MUT5, Representing central government market output and output for own final use is now accompanied by the footnote "Includes payments for non-market output".

In both Tables PSA6H and PSA6J, series NMIX, Representing local government market output, has been replaced by series AE76 with the accompanying footnote "Market output, payments for non-market output, pension contributions, current grants received from central government and capital grants received from the private sector are recorded as negative expenditure."

Social transfers in kind

As announced in the public sector finance: April 2016 bulletin, to accommodate the subdivision of [social transfers in kind](#) dependant on whether government directly provides the good or pays a third party to do so, we have made a small change to the presentation of data in Table PSA6E.

In Table PSA6E, series MF76, Representing central government purchase of goods and services is now accompanied by the footnote "Includes both non-market production and market production of social transfers in kind".

13 . Consultation with users

As part of our continuous engagement strategy, we welcome your feedback on ways in which this bulletin can be improved. Please email: public.sector.accounts@ons.gsi.gov.uk

The use of GDP in public sector fiscal ratio statistics

In January 2016, we asked whether the public sector fiscal statistics presented as ratios of GDP that we publish in the public sector finances meet your needs. We asked for responses by 18 March 2016, but as a result of limited feedback we followed the issue up bilaterally with certain key users of the public sector finances. The responses we received through this process supported the current publication approach. Specifically, the responses:

- were unanimous that there was no user demand for monthly, quarterly or year-to-date statistics to be presented as ratios of GDP. The one exception to this being that debt should continue to be presented as a percentage of GDP on a monthly basis
- highlighted the importance of long time series (of at least 25 years) being available on a consistent basis
- stressed that both calendar year and financial year data should be available in an easy to access format

One respondent also suggested an alternative methodology for producing forecast estimates of GDP in periods where outturn was not yet available. The current methodology uses forecasted annual GDP growth rates from the Office for Budget Responsibility (OBR) to derive the estimates, but the OBR also publish quarterly GDP growth rates which could be used in the production of these estimates.

Following this feedback, the Public Sector Finances Technical Advisory Group (PSFTAG) met on 6 July to consider the different options available for deriving estimates of GDP. The recommendation of PSFTAG was to use the OBR quarterly GDP forecast series to produce year-on-year growth rates comparing the latest quarter with the same quarter 12 months ago. Applying these growth rates to the latest outturn data allows GDP estimates to be produced for future periods. This methodology change will be implemented in the public sector finances bulletin during Autumn 2016. At the same time the methodology article, [The use of GDP in public sector fiscal ratio statistics](#), will be updated to reflect the new methodology.

While considering the fiscal measures as a percentage of GDP, the PSFTAG also considered whether it was most appropriate to use a centred 12 month GDP figure when calculating net debt as a percentage of GDP or whether to use instead the GDP of the preceding 12 months. PSFTAG recognised that there were benefits in both approaches but neither was conceptually superior to the other. As a result, PSFTAG recommended no change to the current approach of calculating net debt as a percentage of GDP using a GDP measure centred on the end of the month to which the debt relates.

UK Statistics Authority assessment of public sector finances

Alongside monitoring the production and publication of official statistics, the UK Statistics Authority's statutory function is to prepare, adopt and publish a [Code of Practice for Official Statistics](#) (in consultation with others as appropriate), setting out the standards that the Statistics Authority expects official statistics to meet. The Statistics Authority also determines whether official statistics comply with the Code and, if so, designates them with the quality mark "National Statistics". The process of determining compliance with the Code and designation as National Statistics is known as "Assessment".

On 8 November 2015, the UK Statistics Authority published its latest assessment report of [public sector finances](#). The report confirmed the National Statistics status of the public sector finances bulletin subject to certain requirements being met.

14. Background notes

1. List of tables associated with this bulletin

Table 6 lists all the data tables associated with this bulletin and may be found in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

Table 6: List of tables associated with this bulletin

Table Name	Title
PSA1	Public sector summary
PSA2	Public sector net borrowing: by sector
PSA3	Public sector current budget deficit, net borrowing and net cash requirement (excluding public sector banks)
PSA4	Public sector net debt (excluding public sector banks)
PSA5A	Long run of fiscal indicators as a percentage of GDP on a financial year basis
PSA5B	Long run of fiscal indicators as a percentage of GDP on a quarterly basis*
PSA6A	Net borrowing: month and year-to-date comparisons
PSA6B	Central government account: overview
PSA6C	Central government account: total revenue, total expenditure and net borrowing
PSA6D	Central government account: current receipts
PSA6E	Central government account: current expenditure
PSA6F	Central government account: net investment
PSA6G	Local government account: overview*
PSA6H	Local government account: total revenue, total expenditure and net borrowing*
PSA6I	Local government account: current receipts*
PSA6J	Local government account: current expenditure*
PSA6K	Local government account: net investment*
REC1	Reconciliation of public sector net borrowing and net cash requirement (excluding banking groups)
REC2	Reconciliation of central government net borrowing and net cash requirement
PSA7A	Public sector net cash requirement
PSA7B	Public sector net cash requirement*
PSA7C	Central government net cash requirement
PSA7D	Central government net cash requirement on own account (receipts and outlays on a cash basis)
REC3	Reconciliation of central government net cash requirement and debt (Experimental Statistic)
PSA8A	General government consolidated gross debt nominal values at end of period
PSA8B	Public sector consolidated gross debt nominal values at end of period
PSA8C	General government net debt nominal values at end of period

PSA8D	Public sector net debt nominal values at end of period
PSA9	Bank of England Asset Purchase Facility Fund (APF)
PSA10	Public sector transactions by sub-sector and economic category
PSA1R	Public sector statistics: revisions since last publication*
PSA2R	Public sector net borrowing: by sector: revisions since last publication
PSA6R	Central government account: overview: revisions since last publication*

Source: Office for National Statistics

- These tables are published in Excel format only.

2. Appendices – Data in this release

- [Appendix A – Public Sector Finances Tables 1 to 10](#)
- [Appendix B – Large impacts on public sector fiscal measures excluding financial intervention \(one off events\)](#)
- [Appendix C – Revisions analysis on several main components of the central government account \(current receipts, current expenditure, net borrowing and net cash requirement\)](#)

3. Data quality

A [quality and methodology information report](#) for the public sector finances is available on our website. This report describes in detail the intended uses of the statistics presented in this publication, their general quality and the methods used to produce them.

An [overview note on the data sources used within public sector finances](#) and the quality assurance processes that are undertaken in compiling the statistical release was published on our website on 19 October 2012.

4. Definitions

A [methodology guide](#) to monthly public sector finance statistics is available on our website. It explains the concepts and measurement of the monthly data, plus those previously published, and gives some long runs of historical data. The following background notes provide further information regarding the monthly data.

Table 7 is intended to provide users with the important terms needed to understand this release.

Table 7: Terms to help you understand this release

Term	Description
Accruals /accrued recording	Financial recording based on when ownership transfers or the service is provided (sometimes different to when cash is paid).
Asset Purchase Facility Fund (APF)	An arm of The Bank of England able to purchase financial assets including government securities (gilts). The APF has earned interest which is periodically transferred back to central government.
Cash recording	Financial recording based on when cash is paid or received. Net cash requirement is recorded on a cash basis and net debt is close to being a cash measure.
Current budget deficit	The gap between current expenditure and current receipts (having taken account of depreciation).
Current expenditure	Spending on government activities including: social benefits, interest payments, and other government department spending (excluding spending on capital assets).

Current receipts	Income mainly from taxes (e.g. VAT, income and corporation taxes) but also includes interest, dividend and rent income.
ESA 1995	European System of Accounts 1995 was the European legal requirement for the production of National Accounts prior to September 2014.
ESA 2010	European System of Accounts 2010 is the European legal requirement for the production of National Accounts from September 2014.
Maastricht deficit	General government net borrowing as defined within the Maastricht Treaty and Stability and Growth Pact (and as supplied to Eurostat)
Maastricht debt	General government gross debt as defined within the Maastricht Treaty and Stability and Growth Pact (and as supplied to Eurostat).
Net borrowing	Measures the gap between revenue raised (current receipts) and total spending (current expenditure plus net investment). A positive value indicates borrowing while a negative value indicates a surplus.
Net cash requirement	A measure of how much cash the government needs to borrow (or lend) to balance its accounts (see cash recording).
Net debt	A measure of how much the government owes at a point in time.
Net investment	Spending on capital assets, e.g. infrastructure projects, property and I.T equipment, both as grants and by public sector bodies themselves minus capital receipts (sale of capital assets).

5. Guidance and methodology

The following articles aim to help users gain a better understanding of public sector finances statistics:

- [Monthly public sector finance statistics: How classification decisions are made](#)
- [Monthly public sector finance statistics: Responsibilities and accountabilities](#)
- [Monthly public sector finance statistics: Methodological guide](#)
- [Monthly public sector finance statistics: Uses and users of government finance statistics](#)
- [Monthly public sector finance statistics: Background for users](#)
- [Monthly public sector finance statistics: Revisions policies for economic statistics](#)
- [Monthly public sector finance statistics: The use of GDP ratio statistics](#)
- [Monthly public sector finance statistics: UK Government interventions in the financial sector 2007 to 2015](#)
- [Monthly public sector finance statistics: Update on the implementation of 2013 review](#)
- [Monthly public sector finance statistics: A comparison of government expenditure and revenue statistics in the monthly public sector finances statistical bulletin and the quarterly national accounts](#)
- [Monthly public sector finance and government deficit and debt under the Maastricht Treaty: Quality and methodology information](#)
- [National accounts classification changes: Blue Book 2015](#)

6. Range of measures published

In this bulletin we publish the headline measures of borrowing and debt (PSNB ex and PSND ex) in tables as well as the wider measures of borrowing and debt that include public sectors banks.

Since 1997, it has been an essential feature of the UK public sector finances' fiscal measures that they are based on National Accounts and European Government Finance Statistics concepts. It is important that these fiscal measures continue to be aligned with these international standards to ensure a high degree of comparability between domestic and international measures, and because the government bases its fiscal policy on these aligned measures.

7. Coherence

EU Council Directive 2011/85/EU (part of the enhanced EU economic governance package regulations known as the "6 pack") includes statistical requirements for government finance statistics relating to the monthly publication of statistics and annual publication of specific contingent liabilities and other potential liabilities. Tables PSA6C and PSA6H were introduced into the PSF bulletin in 2014 in order to fully comply with the monthly government finance statistics requirements.

On 22 December 2014, we published the required information on government contingent liabilities and other potential liabilities for the first time. The latest update to these figures was published on 22 December 2015, alongside an article setting out the wider background to different debt measures used in the UK.

The public sector finances (PSF) has a more flexible revisions policy than other National Accounts data. Therefore, PSF data may be inconsistent with the published GDP and Sector and Financial Accounts datasets because a revision may not be incorporated into the main National Accounts dataset until a later date. More information can be found in the [Public Sector Finances revision policy](#).

General government net borrowing and gross consolidated debt reported in this bulletin are calculated following the rules of the European System of Accounts 2010 (ESA 2010) and are the same in definition as the general government debt and deficit monitored under the Maastricht Treaty. This was most recently reported on 15 July 2016, with the next publication scheduled for 20 October 2016.

When calculating debt as a percentage of GDP in the bulletin on UK government debt and deficit for Eurostat, the general government gross debt at the end of the year is divided by the GDP for the previous 12 months. This methodology is adopted to be consistent with [Eurostat publications](#) which report on Maastricht debt for all EU countries.

However, when calculating public sector net debt as a percentage of GDP in the UK public sector finances, the debt figure is divided by an annual GDP figure which is centred on the month to which the debt relates. To be consistent, the general government gross debt as a percentage of [GDP in the public sector finances](#) is calculated using the same centred GDP figure. More information can be found in an article on [the use of GDP in the fiscal ratio statistics](#).

Tax receipts data published in this bulletin are presented in terms of broad tax categories (for example, Income Tax, VAT). For more detail on individual taxes users can go to the [HM Revenue and Customs website](#) and access a monthly publication which provides cash tax receipts data which are entirely consistent with the data published in Table PSA7 in the Public Sector Finances Tables 1 to 10: Appendix A dataset.

8. OSCAR – Online System for Central Accounting and Reporting

In June 2010, HM Treasury published, as part of the government transparency agenda, raw data from the COINS database (the predecessor to OSCAR) for the financial years ending March 2006 to 2010. From September 2012 onwards the data releases have been made from OSCAR, the replacement for COINS. The latest in-year quarterly data was released on 21 June 2016, and the latest annual data were released on 20 November 2015. The data are accessible from [HM Treasury's website](#).

9. Accuracy

Central government departmental expenditure data are subject to various validation processes and improve over time. They go through 4 main stages:

- stage 1 – initially, they are estimated using in-year reported data

- stage 2 – in the July following the completion of the financial year, departments update their full financial year estimates (but with no in-year profile), for publication in the Treasury’s Public Spending Statistics annual publication; these estimates will be in line with the audited resource accounts for most departments
- stage 3 – for the Autumn update of the Treasury’s Public Spending Statistics these financial year estimates are updated
- stage 4 – in March the following year the winter update of the Treasury’s Public Spending Statistics is published and the financial year estimates are further improved; all departments’ and devolved administrations’ accounts will have been audited and finalised by this stage; these revisions are not normally included in the public sector finances statistical bulletin until the September release

Data up to and including the financial year ending March 2013 (April 2012 to March 2013), the financial year ending March 2014 (April 2013 to March 2014) and the financial year ending March 2015 (April 2014 to March 2015) are at stage 4. Data for the financial year ending March 2016 (April 2015 to March 2016) are at stage 2, while data for the financial year ending March 2017 (April 2016 to March 2017) are at stage 1.

The local government data for the financial year ending March 2011, 2012, 2013 and 2014 for local authorities are based on final outturns for receipts and expenditure.

Data for the financial year ending March 2015 (April 2014 to March 2015) are mainly based on final outturns (provisional outturns have been used for Scotland).

Estimates for financial year ending March 2016 (April 2015 to March 2016) are based on a combination of in-year returns, forecast data, and provisional outturns. These are subject to revision when more outturn data become available.

1. The reconciliation of net cash requirement to debt

The issues and subsequent revisions to CGNCR reported in November 2014 were identified through work undertaken to reconcile the 3 different fiscal measures (that is, net cash requirement, net borrowing and net debt) and to reconcile the central government net cash requirement with cash reported in audited resource accounts.

We are currently building these reconciliation processes into the monthly production systems. The first of these new reconciliations, Table REC3 in the Public Sector Finances Tables 1 to 10: Appendix A dataset, attempts to reconcile central government net cash requirement and net debt.

Table REC3 is not currently designated a National Statistic and should be considered as a work-in-progress, with plans to introduce further refinements in the coming months.

2. Revisions

We define a revision as a scheduled change to any published ONS output which may be made in order to incorporate better source data or to reflect improved methodology.

[The Public Sector Finances revision policy](#) is published on our website. It was last updated in September 2015.

Table 8: Revisions from the first estimate of financial year end public sector net borrowing (excluding banks)

UK			
£ million (not seasonally adjusted)			
Financial year	First estimate	Revisions 6 months after year end ¹	Revisions 12 months after year end ²
2009/10	152,842	2,774	3,583
2010/11	141,142	-4,400	-4,301
2011/12	125,974	-6,673	-5,057

2012/13	86,156	-4,892	-5,428
2013/14 ³	95,507	98	-1,277
2014/15 ⁴	87,337	2,714	1,165
2015/16 ⁵	73,989	-	-

Source: Office for National Statistics

Notes:

1. Difference between PSNB ex published in September and the first estimate (published in the previous April).
2. Difference between PSNB ex published in March and the first estimate (published in the previous April).
3. PSNB ex has been adjusted to remove the impact of ESA2010 which was implemented in September 2014.
4. PSNB ex has been adjusted to remove the impact of the Housing Association re-classification which was implemented in February 2016.
5. 2015/16 represents first estimate of PSNB ex for the financial year ending March 2016 (April 2015 to March 2016).

The Revisions analysis for Public Sector Finances: Appendix C dataset to the monthly public sector finance statistical bulletin presents revisions analysis to a number of main central government measures (current receipts, current expenditure, net borrowing and net cash requirement).

By applying a statistical significance test, this analysis investigates the size and direction of revisions from each measure's first publication to that recorded a year later. An average of 5 years' worth of such revisions is used to identify any statistical bias.

These indicators only provide summary measures of revisions; the revised data may still be subject to measurement error.

Currently data for the public sector banks are only available for periods up to December 2015. Values for months from January 2016 onwards are our estimates. Consequently these, and the aggregates which include the impacts of financial interventions, may be revised substantially when actual data becomes available.

3. The alignment of public sector finance with the UK government debt and deficit for Eurostat statistical bulletin

Each quarter (March, June, September and December) public sector finance (PSF) data are aligned to the data reported in the UK government debt and deficit for Eurostat statistical bulletin to take advantage of the more detailed quarterly data underpinning the latter publication.

In order for the latest month and financial year-to-date to reflect the latest available information, while ensuring coherence between the UK government debt and deficit for Eurostat statistical bulletin output and the PSF statistical bulletin:

- the latest reported month reflects the most up-to-date PSF data available
- the quarterly data in the periods common to both the UK government debt and deficit for Eurostat statistical bulletin and PSF are aligned
- the estimates for the month immediately prior to the latest month (and following that aligned to the UK government debt and deficit for Eurostat statistical bulletin) are calculated by taking the latest data for the cumulative financial year-to-date and subtracting both the cumulative totals for those aligned quarters in the financial year and the latest month estimates

For example, in the PSF published in September:

- the August estimates use the latest reported data

- the PSF data in the period April to June are aligned to the UK government debt and deficit for Eurostat statistical bulletin
- the July figures are derived from the financial year-to-date (April to August) less the sum of the aligned period (April to June) and August

This alignment process results in a temporary adjustment to the published monthly profiles, which will unwind in the dataset reported in the bulletin published in the following month, which is then de-coupled from the UK government debt and deficit for Eurostat statistical bulletin to reflect the latest available data.

In the example above, the derived estimate to July may revise substantially to reflect the latest monthly path.

This phenomenon is discussed further in the [Public Sector Finances revision policy](#).

4. **Publication policy**

A brief paper explaining the [roles and responsibilities of ONS and HM Treasury](#) when producing and publishing the public sector finances statistical release is on our website.

A note on the [main uses and users of the public sector finances statistics](#) is available on our website.

Recommendations for the improvement of the public sector finances statistical bulletin may be emailed to public.sector.accounts@ons.gsi.gov.uk

National Statistics are produced to high professional standards and released according to the arrangements approved by the [UK Statistics Authority](#) compliant with the [Code of Practice for Official Statistics](#). They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

Special arrangements apply to the public sector finances, which is produced jointly with HM Treasury. A list of ministers and officials with [pre-publication access](#) to the contents of this bulletin is available on request. In addition, some members of the Treasury's Fiscal Statistics and Policy (FSP) team will have access to them at all stages, because they are involved in the compilation or quality assurance of data. Some members of the Treasury's communications team will also see the bulletin, but only within the 24 hour pre-release period, because they place these data on the website.

Public sector finance data series previously published in Financial Statistics are made available for download on the public sector finance datasets page.

Tables 1.2A, 1.3A and 1.4A which are updated monthly will continue to be available monthly, published concurrently with the PSF Supplementary data, while Tables 1.3B, 1.3C and 1.3D will be available quarterly.

5. **Feedback**

As part of our continuous engagement strategy, we welcome your comments on ways in which the public sector finances statistical bulletin might be improved. Please email: public.sector.accounts@ons.gsi.gov.uk

1 NIF benefits are mainly pension related.

2 Social assistance primarily includes benefits related to unemployment, disability, income support and carers.

3 Market output, pension contributions and current grants received from abroad are recorded as negative expenditure

4 Under ESA2010 this includes some 'in-house' Research & Development output.

5 Includes both non-market production and market production of social transfers in kind

1 Includes net increase in inventories and valuables.

2 Includes Housing Revenue Account reform in Mar 2012.

3 The large capital transfers in 2008/09 arise from movements associated with depositor compensation payments by FSCS and HMT.

4 Includes transfer of Royal Mail pension plan assets in April 2012 and movements associated with depositor compensation payments by FSCS and HMT in 2008/09.

5 Includes capital transfers to Lloyds Banking Group and Royal Bank of Scotland associated with equity purchases.

6 APF = Asset Purchase Facility. Currently no capital transfers to the APF have taken place, but transfers may be made in future.

7 Includes Housing Revenue Account reform in Mar 2012, transfer of Royal Mail pension plan assets in April 2012 and movements associated with depositor compensation payments by FSCS and HMT in 2008/09.

Relationship between columns: 1=2+4+7 ; 10=2+3+6+9 ; 12=10+11
GGNCR (series RUUI) =1+5

Figures for most recent months are ONS estimates

3 Excluding public sector banks
4 NCR = Net Cash Requirement

1 Previously known as the borrowing requirement of the sector concerned
2 Includes Bank of England Asset Purchase Facility Fund and Special Liquidity Scheme. Figures derived from Bank of England accounts and ONS estimates

PSA7C Central Government Net Cash Requirement

Relationships between columns 1+3+4=5 ; 2+3+4=6 ; 6+7+8=5

1 NRAM = Northern Rock Asset Management, B&B = Bradford and Bingley.

2 NCR = Net Cash Requirement

3 Does not include Net Cash Requirement to Central Government

4 Negative NCR reflects change in financing as from 2014/15 new financing requirements of Network Rail were met through core central government borrowing and are therefore included in main CGNCR.

PSA7D Central Government Net Cash Requirement on own account (receipts and outlays on a cash basis)

Relationships between columns 1+6+7=8; 9+10+11=12; 12-8=13

- Comprises payments into the Consolidated Fund and all payovers of NICs excluding those for Northern Ireland.
- Income tax includes capital gains tax and is gross of any tax credits treated by HM Revenue and Customs as tax deductions.
- UK receipts net of personal pension rebates; gross of Statutory Maternity Pay and Statutory Sick Pay.
- Payments into Consolidated Fund.
- Including some elements of expenditure not separately identified.
- Mainly comprises privatisation proceeds.
- Net of certain receipts, and excluding on-lending to local authorities and public corporations.
- A much more detailed breakdown of tax receipts is available from HM Revenue and Customs at www.hmrc.gov.uk/statistics/receipts.htm.
- NCR = Net Cash Requirement. Without Northern Rock Asset Management & Bradford and Bingley.
- Gross of tax credits.
