Release date:
22 October 2019

Next release:
21 November 2019

Notice

25 October 2019

We have identified an error in the measurement of local government social benefits in the current financial year-to-date (April to September 2019) and will be correcting this at the earliest opportunity. The error affects local government current expenditure and local government net borrowing, as well as the equivalent general government and public sector measures; including public sector net borrowing.

Initial investigations suggest that the correction will show a reduction in public sector net borrowing (excluding public sector banks) of between £1.0 billion and £1.5 billion in the financial year-to-date (currently published as £40.3 billion); and a reduction of between £200 million and £250 million in the latest month (currently published as £9.4 billion). This only affects the current financial year and does not impact on public sector net debt. We expect to publish a corrected bulletin and dataset early next week.

Although GDP is not affected by this error, there will be some small impact on the Sector and Financial Accounts. The corrected data will be taken on in the next release, which is scheduled for December 2019.

The ONS apologises for this error and for any inconvenience.

1 . Main points

- Borrowing (public sector net borrowing excluding public sector banks) in September 2019 was £9.4 billion, £0.6 billion more than in September 2018; this is the first September year-on-year borrowing increase for five years.
- Borrowing in the current financial year-to-date (April 2019 to September 2019) was £40.3 billion, £7.2 billion more than in the same period last year; this is the first April-to-September borrowing increase for five years.
- Debt (public sector net debt excluding public sector banks) at the end of September 2019 was £1,790.9 billion (or 80.3% of gross domestic product (GDP)), an increase of £27.3 billion, or a decrease of 1.2 percentage points, on September 2018.
- Debt at the end of September 2019 excluding the Bank of England (mainly quantitative easing) was £1,611.1 billion or 72.2% of GDP; this is an increase of £38.6 billion, or a decrease of 0.5 percentage points on September 2018.
- Central government net cash requirement was £32.9 billion in the current financial year-to-date; this is £13.5 billion more than in the same period in the previous year.
- Central government net cash requirement excluding both UK Asset Resolution Ltd and Network Rail was £32.7 billion in the current financial year-to-date; this is £12.2 billion more than in the same period in the previous year.

2 . Things you need to know about public sector finances

In the UK, the public sector consists of six sub-sectors: central government, local government, public non-financial corporations, public sector pensions, the Bank of England and public financial corporations (or public sector banks).

Unless otherwise stated, the figures quoted in this bulletin exclude public sector banks (that is, currently only Royal Bank of Scotland (RBS)). The reported position of debt, and to a lesser extent borrowing, would be distorted by the inclusion of RBS's balance sheet and transactions. This is because the government does not need to borrow to fund the debt of RBS, nor would surpluses achieved by RBS be passed on to the government, other than through any dividends paid as a result of the government equity holdings.

Public sector net borrowing excluding public sector banks (PSNB ex) measures the gap between revenue raised (current receipts) and total spending (current expenditure plus net investment (capital spending less capital receipts)). Public sector net borrowing (PSNB) is often referred to by commentators as "the deficit".

The public sector net cash requirement (PSNCR) represents the cash needed to be raised from the financial markets over a period of time to finance the government's activities. This can be close to the deficit for the same period; however there are some transactions, for example, loans to the private sector, that need to be financed but do not contribute to the deficit. It is also close but not identical to the changes in the level of net debt between two points in time.

Public sector net debt excluding public sector banks (PSND ex) represents the amount of money the public sector owes to private sector organisations including overseas institutions, largely as a result of issuing gilts and Treasury Bills, minus the amount of cash and other short-term assets it holds. Public sector net debt is often referred to by commentators as "the national debt".

While borrowing (or the deficit) represents the difference between total spending and receipts over a period of time, debt represents the total amount of money owed at a point in time.

The national debt has been built up by successive government administrations over many years. When the government borrows (that is, runs a deficit), this normally adds to the debt total, so [reducing the deficit is not the same as reducing the debt](#).

Simple forecast assumptions

Because of the volatility of the monthly data, the cumulative financial year-to-date borrowing figures often provide a better indication of the position of the public finances than the individual months. However, we do not recommend making full financial year forecasts based on current cumulative financial year-to-date borrowing position.

This bulletin reports an initial estimate of borrowing for the first half of the current financial year (April 2019 to September 2019). Caution should be taken if attempting to extrapolate this data to estimate borrowing for the full financial year (April 2019 to March 2020).

If one were to have simply doubled last year's half-year cumulative financial year-to-date borrowing position (April to September 2018) to estimate the full financial year borrowing, it would have resulted in an overestimate of £25 billion.

Autumn Budget

The government has announced that the [2019 Budget](#) will take place on 6 November 2019.

The Budget, or Financial Statement, is a statement made to the House of Commons by the Chancellor of the Exchequer on the nation's finances and the government's proposals for changes to taxation and spending. The Budget also includes forecasts for the economy by the Office for Budget Responsibility (OBR).

3 . What has changed in this release?

This section presents information on aspects of data or methodology that have been introduced or improved since the publication of the previous bulletin (24 September 2019), along with supporting information that users may find useful.

RBS Dividends

In September 2019, central government received a £1.1 billion dividend payment from the Royal Bank of Scotland (RBS) based on its 62.4% shareholding. This revenue reduces public sector net borrowing in September 2019 by £1.1 billion.

4 . How much is the public sector borrowing?

In September 2019, the public sector spent more money than it received in taxes and other income, meaning it had to borrow £9.4 billion, £0.6 billion more than in September 2018. Of this £9.4 billion, central government borrowed £8.8 billion, local government borrowed £1.3 billion, while the Bank of England recorded a surplus of £0.9 billion.

Borrowing in September tends to be inflated by additional expenditure recorded on winter fuel payments (£2.0 billion in September 2019) and student loan write-offs (£2.7 billion in September 2019). While winter fuel payments are a one-off annual expense recorded each September, student loan write-offs also occur in January and April each year, exerting an up-ward pressure on borrowing in these months owing to the increased expenditure.

Figure 1 presents both monthly and cumulative public sector net borrowing excluding public sector banks (PSNB ex) in the current financial year-to-date (April 2019 to September 2019) and compares these with the same period in the previous financial year.

Figure 1: The Office for Budget Responsibility expects borrowing to increase in the financial year ending March 2020

Cumulative financial year-to-date (April to September 2019) compared with the FYE March 2019 (April 2018 to March 2019), UK

Notes:

1. The OBR full financial year forecast of PSNB ex for the FYE March 2020 (March 2019 EFO). This forecast does not include the impact of change in treatment of student loans.
2. The OBR full financial year forecast of PSNB ex for the FYE March 2020 with a provisional forecast of the impact of the change in treatment of student loans (March 2019 EFO). This forecast includes the impact of student loan sales.

Figure 2 summarises public sector net borrowing (PSNB) by sub-sector in September 2019 and compares this with the equivalent measures in the same month a year earlier (September 2018). This presentation splits public sector net borrowing excluding PSNB ex into each of its five sub-sectors: central government, local government, non-financial public corporations, public sector pensions and the Bank of England.

Source: Office for National Statistics – Public sector finances

Notes:

1. PSNB ex - Public sector net borrowing excluding public sector banks.
2. CGNB - Central government net borrowing.
3. LGNB - Local government net borrowing.
4. PCNB - Non-financial public corporations' net borrowing.
5. BoENB - Bank of England net borrowing.
6. L&P - Land and property.
7. I&W - Income and wealth.
8. NICs - National Insurance contributions.
9. Contributions to EU - UK VAT, GNI and abatement contributions to the EU budget.
10. o/w - Of which.

Central government receipts in September 2019 increased by £4.0 billion (or 6.9%) to £61.2 billion, compared with September 2018, while total central government expenditure increased by £4.3 billion (or 6.8%) to £67.6 billion.

Of this £67.6 billion, £60.8 billion related to the cost of the “day-to-day” activities of the public sector (the current expenditure), while £6.8 billion was capital spending (or net investment), such as on infrastructure.

Income-related revenue increased by £1.7 billion, with self-assessed Income Tax and National Insurance contributions increasing by £1.1 billion and £0.6 billion respectively, compared with September 2018. Over the same period, interest and dividends receipts increased by £1.6 billion, largely as a result of a £1.1 billion dividend payment from the Royal Bank of Scotland (RBS).

Accrued Value Added Tax (VAT) increased by £0.5 billion over the same period, while September Corporation Tax receipts were equal to those in September 2018. However, it is important to note that both of these taxes contain forecast cash receipts data and are liable to revision as actual cash receipts data are received.

In the same period, departmental expenditure on goods and services increased by £2.6 billion, compared with September 2018, including a £0.9 billion increase in expenditure on staff costs and a £1.6 billion increase in the purchase of goods and services.

Interest payments on the government's outstanding debt decreased by £0.5 billion, compared with September 2018, largely resulting from movements in the Retail Prices Index (RPI) to which index-linked bonds are pegged. The relationship between the RPI and the valuation index-linked bonds is explored further in the [Public sector finances Quality and Methodology Information Report](#).

Local government data are based on budget data for England, Wales and Scotland for the financial year ending (FYE) March 2020. Public corporations data remain initial estimates, based on the Office for Budget Responsibility (OBR) forecasts. Current and capital transfers between these sectors and central government are based on administrative data supplied by HM Treasury.

Pensions data for the current financial year are our estimates based on the latest available data. Some of these estimates rely on actuarial modelling – a complex process that most public sector schemes conduct every three to four years. Until such valuations become available, we forecast the change in pension liability using our knowledge of the economic climate. [Pensions in the public sector finances: a methodological guide](#) outlines both the theory and practice behind our calculation of pension scheme estimates.

Because of the volatility of the monthly data, the cumulative financial year-to-date borrowing figures often provide a better indication of the position of the public finances than the individual months' figures. Figure 3 summarises the contributions of each sub-sector to PSNB ex in the latest financial year-to-date (April 2019 to September 2019) and compares these with the same period last year.

10. o/w - Of which.

In the current financial year-to-date (April 2019 to September 2019), public sector spending exceeded the money received in taxes and other income. This meant the public sector had to borrow £40.3 billion; that is, £7.2 billion more than the same period last year.

Of the £40.3 billion borrowed by the public sector in this period, £18.5 billion related to the cost of the “day-to-day” activities of the public sector (the current budget deficit), while £21.8 billion was capital spending (or net investment), such as on infrastructure.

The difference between central government's income and spending makes the largest contribution to the amount borrowed by the public sector. In the latest financial year-to-date, central government received £366.5 billion in receipts, including £270.0 billion in taxes. This was 2.8% more than in the same period last year.

Over the same period, central government spent £392.4 billion, an increase of 4.5%. Of this amount, around two-thirds was spent by central government departments (Education, Defence, Health and Social Care); just below one-third was spent on social benefits (such as pensions, unemployment payments, Child Benefit and Statutory Maternity Pay); and the remainder was spent on capital investment and interest on government's outstanding debt.

Figure 4 shows annual borrowing has generally been falling since the peak in the FYE March 2010 (April 2009 to March 2010).

Figure 4: Borrowing has generally been falling since its peak in the financial year ending March 2010

Public sector net borrowing (excluding public sector banks), UK, April 1993 to September 2019

Source: Office for National Statistics – Public sector finances

Notes:

1. The OBR full financial year forecast of PSNB ex for the FYE March 2020 (March 2019 EFO). This forecast does not include the impact of change in treatment of student loans.
2. Financial year 2018/19 represents the financial year ending 2019 (April 2018 to March 2019)
3. YTD equals year-to-date (April to September).
4. The OBR full financial year forecast of PSNB ex for the FYE March 2020 with a provisional forecast of the impact of the change in treatment of student loans (March 2019 EFO). This forecast includes the impact of student loan sales.

In the latest full financial year (April 2018 to March 2019), the £41.4 billion (or 1.9% of gross domestic product (GDP)) borrowed by the public sector was around a quarter (26.2%) of the amount seen in the FYE March 2010, when borrowing was £158.3 billion (or 10.2% of GDP).

5 . How much does the public sector owe?

Public sector net debt excluding public sector banks (PSND ex) represents the amount of money the public sector owes to private sector organisations (including overseas institutions), which has built up by successive government administrations over many years. When the government borrows, this normally adds to the debt total, but it is important to remember that [reducing the deficit is not the same as reducing the debt](#).

At the end of September 2019, the amount of money owed by the public sector to the private sector stood at just below £1.8 trillion (Figure 5), which equates to 80.3% of the value of all the goods and services currently produced by the UK economy in a year (or gross domestic product (GDP)).

Figure 5: Debt as a percentage of gross domestic product (GDP) has been falling in recent financial years

Public sector net debt (excluding public sector banks), UK, March 1994 to the end of September 2019

Source: Office for National Statistics – Public sector finances

Notes:

1. Includes Asset Purchase Facility (APF), which includes the Term Funding Scheme (TFS).
2. PSND ex is the combination of PSND ex Bank of England plus Bank of England. contribution to PSND ex.

The Bank of England's contribution to net debt is largely a product of their quantitative easing measures, namely the [Bank of England Asset Purchase Facility Fund](#) (BoEAPFF) and the [Term Funding Scheme](#) (TFS). If we were to exclude the Bank of England from our calculation of PSND ex, it would reduce by £179.8 billion, from £1,790.9 billion to £1,611.1 billion, or from 80.3% of GDP to 72.2%.

Figure 6 breaks down outstanding public sector net debt (PSND) at the end of September 2019 into the sub-sectors of the public sector. In addition to public spending net debt excluding public sector banks (PSND ex), this presentation includes the effect of public sector banks on debt.

Figure 6: How each sector contributes to debt, UK

At end of September 2019

Figure 6: How each sector contributes to debt, UK

At end of September 2019

Notes:

1. PSND - Public sector net debt.
2. PSND ex - Public sector net debt excluding public sector banks.
3. PSND ex less BoE - Public sector net debt excluding both public sector banks and Bank of England.

Figure 7 incorporates the borrowing components detailed in Figure 3 to show how the differences between income and spending (both current and capital) have led to the accumulation of debt in the current financial year-to-date (April 2019 to September 2019).

The reconciliation between public sector net borrowing (PSNB) and net cash requirement is presented in more detail in Table REC1 in the [Public sector finances tables 1 to 10: Appendix A dataset](#).

Figure 7: How the differences in expenditure and receipts affect public sector net debt (excluding public sector banks), UK

March 2019 debt position	changes (April to September 2019)	September 2019 debt position
Starting with the public sector gross debt (total owed) position and carrying out the calculations below gives the public sector net debt position for this period.		From the net debt position in the previous period, the changes in the central column provide different flows of accrued resources into and out of the public sector. This shows the amount the public sector needs to borrow. Net borrowing added to the cash flows then shows how the net debt position has changed between the periods.
	Current Expenditure £ 385.6 bn - Current Receipts £ 392.0 bn + Depreciation £ 25.0 bn = Current Budget Deficit £ 18.5 bn + Net Investment £ 21.8 bn = Net Borrowing (PSNBex) £ 40.3 bn + Cash Transactions¹ £ -23.2 bn + Timing Differences² £ -10.1 bn = Net Cash Requirement £ 7.0 bn + Other Transactions³ £ 10.6 bn = Change in Net Debt £ 17.6 bn

Revisions to public sector net borrowing excluding public sector banks in the current financial year-to-date (April to August 2019)

The data for the latest months of every release contain a degree of forecasts. The initial outturn estimates for the early months of the financial year, particularly April, contain more forecast data than other months. This is because profiles of tax receipts, along with departmental and local government spending, are still provisional. This means that the data for these months are typically more prone to revision than other months and can be subject to sizeable revisions in later months.

Public sector net borrowing excluding public sector banks (PSNB ex) in the current financial year-to-date (April to August 2019) has been revised down by £0.2 billion compared with figures presented in the [previous bulletin](#) (published 24 September 2019), largely as a result of updated central government data.

A reduction to previous estimates of Value Added Tax (VAT) and Corporation Tax of £0.1 billion and £0.2 billion respectively have been partially offset by a combined upward revision of £0.2 billion to income tax and National Insurance contributions. This reduction in receipts combined with a £0.2 billion reduction in capital transfers from central government to the private sector has led to a £0.1 billion downward revision to PSNB ex.

An increase in current transfers from central to local government in the current financial year-to-date has reduced local government borrowing by £0.1 billion.

Figure 8 summarises the revisions to PSNB ex by sub-sector, comparing the latest estimates of borrowing with those presented in the previous bulletin (published on 24 September 2019). This presentation splits the revisions to PSNB ex into each of its five sub-sectors: central government, local government, non-financial public corporations, public sector pensions and the Bank of England.

Figure 8: How each element of the public sector contributes to the revision in financial year-to-date net borrowing (PSNB ex)

Revisions to public sector net debt excluding public sector banks

There has been a negligible revision to public sector net debt excluding public sector banks (PSNB ex) at the end of September 2019 compared with that presented in the [previous bulletin](#) (published on 24 September 2019). However, as a result of incorporating [the latest estimates of gross domestic product \(GDP\)](#) (published on 30 September 2019), our estimates of statistics (such as debt) expressed as a ratio of GDP have been revised back to the financial year ending March 1998. These extended revisions to the previous estimate of GDP are a result of data and methodology improvements introduced in [National Accounts Blue Book 2019](#).

7 . How do our figures compare with official forecasts?

The independent Office for Budget Responsibility (OBR) is responsible for the production of official forecasts for government. These forecasts are usually produced twice a year, in spring and autumn.

On 13 March 2019, the government published its [Spring Statement 2019](#). On the same day, the OBR published updated forecasts for debt and borrowing, on which the Spring Statement 2019 is based.

The OBR forecasts used in this bulletin are based on those published in its [Economic and fiscal outlook – March 2019](#) (EFO). In this publication, the OBR's forecast public sector net borrowing excluding public sector banks (PSNB ex) in the financial year ending March 2019 to be £22.8 billion, with an expectation that it would increase to £29.3 billion in the financial year ending (FYE) March 2020.

These March 2019 OBR forecasts do not include estimates of the revisions made in September 2019 for student loans and pensions data. The OBR intends to reflect these changes in their next fiscal forecast.

In [Chart B.4 of the Economic and fiscal outlook – March 2019 \(Excel, 937 KB\)](#), the OBR estimates that the inclusion of student loans in the public sector would add £11.2 billion to public sector net borrowing (PSNB) in the FYE March 2020, giving an expected total PSNB of £40.6 billion for the current financial year. However, this is an initial forecast and does not include the impact of student loan sales as this methodology was yet to be determined at the time the forecast was made.

Table 2 compares the current outturn estimates for each of our main public sector excluding public sector banks aggregates for the current financial year-to-date with corresponding OBR forecasts for the following financial year. The forecasts used in this table are consistent with the March 2019 OBR forecasts and do not include estimates of the revisions made in September 2019 for student loans and pensions data. OBR will restate their forecast for the current financial year in their November EFO, published alongside the [2019 Budget](#) on the 6 November 2019.

In addition, Table 2 compares the latest full financial year (April 2018 to March 2019) outturn estimates with those of the previous financial year.

Caution should be taken when comparing public sector finances data with the OBR figures for the full financial year. Data are not finalised until some time after the financial year ends, with initial estimates made soon after the end of the financial year often subject to sizeable revisions in later months as forecasts are replaced with audited outturn data. There may also be known methodological differences between the OBR forecasts and outturn data.

Table 2: Latest outturn estimates compared with Office for Budget Responsibility forecasts
Forecasts in the current financial year-to-date (April to September 2019) compared with the latest full financial year (April 2018 to March 2019), UK

8 . International comparisons of borrowing and debt

Government Finance Statistics

The UK government debt and deficit statistical bulletin is published quarterly (in January, April, July and October each year), to coincide with when the UK and other EU member states are required to report on their deficit (or net borrowing) and national debt to the European Commission.

On 18 October 2019, we published [UK government debt and deficit: June 2019](#), consistent with [Public sector finances, UK: August 2019](#) (published on 24 September 2019). In this publication, we stated that:

- general government gross debt was £1,821.9 billion at the end of the financial year ending (FYE) March 2019, equivalent to 84.2% of gross domestic product (GDP); this is 24.2 percentage points above the Maastricht reference value of 60%
- general government deficit (or net borrowing) was £41.5 billion in the FYE March 2019, equivalent to 1.9% of GDP; this is 1.1 percentage points below the Maastricht reference value of 3%

It is important to note that the GDP measure used as the denominator in the calculation of the debt ratios in the UK government debt and deficit statistical bulletin differs from that used within the public sector finances statistical bulletin.

International Monetary Fund's Government Finance Statistics framework

In June 2019 we published supplementary tables compliant with the International Monetary Fund's (IMF) Government Finance Statistics Framework for the first time. These new supplementary tables, [International Monetary Fund's Government Finance Statistics Framework in the public sector finances: Appendix E](#), present the public sector balance sheet, statement of operations and statement of other economic flows.

Alongside this month's bulletin, the supplementary tables have been improved to incorporate unfunded pensions, the gross reporting of funded pensions and [improvements to the estimation of capital stocks](#) (and therefore the consumption of fixed capital).

Further improvements include extended coverage of public-private partnerships – those that are considered to be on-balance sheet in the Whole of Government Accounts (WGA). These changes address methodological and coverage differences between the European System of Accounts 2010: ESA 2010 and the Government Finance Statistics Manual 2014: GFSM 2014 and brings us fully in line with GFSM 2014. As such, aggregates presented in the GFSM 2014 tables are different to those in the public sector finances.

Reconciliation tables are included and our methodological article, [International Monetary Fund's Government Finance Statistics framework in the public sector finances](#), accompanies the tables. It provides an overview of the IMF's framework, explains differences to the national accounts framework, provides information on data sources and quality, and details our future plans.

9 . Quality and methodology

The [Public sector finances Quality and Methodology Information Report](#) contains important information on:

- the strengths and limitations of the data and how it compares with related data
- uses and users of the data
- how the output was created
- the quality of the output including the accuracy of the data

The [public sector finances methodological guide](#) provides comprehensive contextual and methodological information concerning the monthly public sector finances statistical bulletin.

The guide sets out the conceptual and fiscal policy context for the bulletin, identifies the main fiscal measures, and explains how these are derived and interrelated. Additionally, it details the data sources used to compile the monthly estimates of the fiscal position.

Local government forecasts

In recent years, planned expenditure initially reported in local authority budgets has systematically been higher than the final outturn expenditure reported in the audited accounts. We therefore include adjustments to reduce the amounts reported at the budget stage.

In September 2019, we incorporated provisional outturn data and removed our underspend adjustment for current expenditure in England over the financial year ending (FYE) March 2019, along with our underspend adjustment for both England and Scotland capital expenditure over the same period. The only adjustment remaining for FYE March 2019 is for Wales capital expenditure (£0.2 billion).

For the FYE March 2020 we have introduced a £1.2 billion downwards adjustment to England current expenditure, along with £0.7 billion and £0.2 billion adjustments to Scotland and Wales capital expenditure respectively.

Further information on these and additional adjustments can be found in the [Public sector finances Quality and Methodology Information Report](#).

10 . Developments in public sector finance statistics: September 2019

This section explains the key methodology changes introduced to public sector finance statistics in September 2019 and presents estimates of our headline measures of public sector net borrowing (PSNB ex), net debt (PSND ex) and net financial liabilities (PSNFL ex) had these changes not been introduced.

Public sector pensions

We have adopted a new, gross presentation of funded employment-related pensions. This change, predominantly presentational in nature, has greatly increased the volume of assets recorded on the public sector balance sheet but consolidated many inter-public sector balances and transactions. We now also include the Pension Protection Fund within the public sector boundary.

These changes have reduced PSND ex at the end of March 2019 by £28.6 billion, reflecting the consolidation of gilts and recognition of liquid assets held by the public pension schemes.

Student loans

Improvements in the statistical treatment of student loans have added £12.4 billion to PSNB ex in the financial year ending (FYE) March 2019. Outlays are no longer all treated as conventional loans. Instead, we split lending into two components: a genuine loan to students and government spending. This new approach recognises that a significant proportion of student loan debt will never be repaid. We record government expenditure related to the expected cancellation of student loans in the period that loans are issued. Further, government revenue no longer includes interest accrued that will never be paid.

Capital consumption

In June 2019, we announced our intention to introduce a number of [improvements to the estimation of capital stocks](#) and therefore the consumption of fixed capital in September 2019. These improvements included a review of:

- the life length of fixed assets
- the classification of stocks by asset, industry and the institutional sector
- the modelling of the age-efficiency profile of capital assets

Any updates to capital consumption are PSNB ex neutral and have no impact on PSND ex or PSNFL ex.

The impact of these developments

Tables 3, 4 and 5 present our latest estimates of PSNB ex, PSND ex and PSNFL ex with the impact of the methodology changes introduced in September 2019 removed.

Notes

1. Consistent with the October 2019 PSF publication. [Back to table](#)
2. Includes Pension Protection Fund (PPF) and public sector employment-related pension funds. [Back to table](#)
3. Presents PSND ex and PSND ex % of GDP on a basis that excludes the September 2019 changes. [Back to table](#)

[Impact of student loans, public sector-funded pension scheme and capital consumption changes introduced in September 2019: Appendix G](#) expands this presentation to include the impact on current budget deficit and net investment and also provides additional quarterly and monthly time series. We plan to continue publishing updated versions of these tables until the end of the current financial year (April 2020).

11 . Looking ahead

This section presents information on aspects of data or methodology that are planned but not yet included in the public sector finances.

Looking ahead – developments in public sector finance statistics

On 31 May 2019, we published the second publication in our series of development articles, [Looking ahead – developments in public sector finance statistics: 2019](#). In this article, we listed a number of short-term areas of work that we aim to implement in public sector finance statistics within 18 months from the date of this publication. These include:

- treatment of student loans (subsequently introduced in September 2019)
- presentation of pension data on a gross basis (subsequently introduced in September 2019)
- International Monetary Fund's (IMF) Government Finance Statistics Framework (subsequently introduced in October 2019)
- treatment of capital consumption, or depreciation (subsequently introduced in September 2019)
- continuous development of public sector net financial liabilities (PSNFL)
- recording of leases

The article also provides some detail on the areas of planned medium- and longer-term development.

Thomas Cook Group plc

On 23 September 2019, winding up orders were made against [Thomas Cook Group plc](#) and associated companies. The court appointed the Official Receiver as the liquidator. We will investigate any implications of this decision for the public sector and announce the results in due course.

Ongoing developments in public sector finance statistics

This section presents information on our current continuous improvement projects and methodological decisions that are planned but not yet included in the public sector finances.

Clinical Negligence Indemnity Cover

On 1 April 2019, the government announced the [Clinical Negligence Scheme for General Practice \(CNSGP\)](#), operated by [NHS Resolution](#) on behalf of the Secretary of State for Health and Social Care.

The scheme provides comprehensive cover to all General Practitioners (GPs) and their wider practice team for clinical negligence relating to NHS services occurring from 1 April 2019. In parallel, the government has agreed commercial terms with the Medical Protection Society covering claims for historical NHS clinical negligence incidents concerning their GP members occurring at any time before 1 April 2019.

We are currently assessing the implications of this scheme for the public sector finances and will announce our findings at the earliest opportunity.

EU withdrawal agreement

Although the Office for Budget Responsibility (OBR) discusses the EU settlement in their [Economic and fiscal outlook – March 2019 report](#), the details in the report are still subject to negotiation.

There is insufficient certainty at this stage for us to complete a formal assessment of impact on the UK public sector finances.

On 28 January 2019, former National Statistician John Pullinger [released a statement outlining our legislative preparations for a possible no-deal Brexit](#).

East Coast Mainline

On 16 May 2018, the government announced that from 24 June 2018, [London North Eastern Railway \(LNER\) will take over the running of East Coast Mainline services](#). On 31 August 2018, we announced that [LNER would be classified to the public non-financial corporations sub-sector](#), effective from 14 February 2018. We are currently investigating the implications of this decision and our conclusions will be announced in due course.

Carillion insolvency

Following Carillion Plc declaring insolvency on 15 January 2018, the UK government announced that it would [provide the funding required by the Official Receiver](#), to ensure continuity of public services through an orderly liquidation. The Official Receiver has been appointed by the court as liquidator, along with partners at PwC that have been appointed as Special Managers. The defined benefit pension schemes of former Carillion employees are currently being [assessed by the Pension Protection Fund](#) prior to any transition into the Pension Protection Fund scheme.

We are currently investigating the various impacts of the liquidation of Carillion on the public sector finances, including in relation to the public-private partnership projects in which Carillion was involved and the additional funding that the government has provided to maintain public services. We will announce our findings in due course.

Prior to liquidation, Carillion held approximately 450 contracts with government, representing 38% of Carillion's 2016 reported revenue.

Sale of railway arches

On 11 September 2018, Network Rail announced they had agreed terms for the sale of their Commercial Estate business in England and Wales. On 4 February 2019, the National Audit Office confirmed that [Network Rail had completed a £1.46 billion sale of its commercial property portfolio](#) consisting of approximately 5,200 properties across England and Wales, mainly railway arches.

Public sector net debt (PSND) at the end of February 2019 and the central government net cash requirement in February 2019 were each reduced by an amount equivalent to the cash received by central government from the sale.

We are currently investigating the nature of the transaction to ensure that the impacts will be fully reflected in the public sector finances, so it has yet to be determined whether public sector net borrowing (PSNB) is affected and therefore it remains unchanged.

McCloud pension case

In 2015, the government introduced changes to most public sector pension schemes. As part of the transitional arrangements, older members of the pension schemes had an opportunity to stay in their original pension schemes, which offered better terms than the new schemes introduced at the time. Younger members had to transfer to the new schemes. In December 2018, the Court of Appeal ruled that these arrangements amounted to unlawful age discrimination in a decision that was later upheld by the Supreme Court.

Although the court ruling was related to judges' and firefighters' pension schemes, on [15 July 2019 the Government confirmed](#) that the difference in treatment will need to be remedied across all relevant public sector pension schemes.

The impact of this decision on public sector finances is not yet known, but it has the potential to change the size of the pension liability as well as the net borrowing position of the public sector pension sub-sector. We will provide further information on the impacts of this ruling when it becomes available.

12 . Links to data and related publications

Time series data

All data contained within these publications are available to download via the [Public sector finances time series](#). From April 1997 to date, where available, time series are presented as monthly data, with series extending further back in time, generally presented on a quarterly or financial year basis.

Time series exclusive to the public sector finances borrowing by sub-sector presentation are only available as quarterly time series, though these extend back to 1946.

Supporting publications

Datasets supporting this publication are available in appendices to the bulletin:

- [Public sector finances tables 1 to 10: Appendix A](#)
- [Large impacts on public sector fiscal measures excluding banking groups: Appendix B](#)
- [Public sector finances revisions analysis on main fiscal aggregates: Appendix C](#)
- [Public sector current receipts: Appendix D](#)
- [International Monetary Fund's Government Finance Statistics Framework in the public sector finances: Appendix E](#)
- [Revisions to the first reported estimate of public sector net borrowing: Appendix F](#)
- [Impact of student loans, public sector-funded pension scheme and capital consumption changes introduced in September 2019: Appendix G](#)

Public sector borrowing by sub-sector

Each month, at 9:30am on the working day following the [public sector finances statistical bulletin](#), we publish [Public sector finances borrowing by sub-sector](#). This release contains an extended breakdown of public sector borrowing in a matrix format and estimates of total managed expenditure (TME).

Country and regional public sector finances

On 28 May 2019, we published the latest release of our regular [Country and regional public sector finances articles](#). This release includes a summary of net fiscal balance, total revenue and total expenditure by country and region within the UK. We plan to publish our next release [Country and regional public sector finances: financial year ending 2019](#) on 20 December 2019.

1 Unless otherwise stated.

2 Current Budget Deficit is the difference between current expenditure and current receipts

3 Net Investment is investment less depreciation.

4 Net Borrowing is Current Budget Deficit less Net Investment.

5 APF - Bank of England Asset Purchase Facility

6 SLS - Special liquidity Scheme.

7 This ratio employs a 12 month centred moving average of GDP.

8 Change measured in percentage points

9 Funded pensions only.

Relationships between columns 1+3+4=5 ; 2+3+4=6 ; 6+7+8=5

1 NRAM = Northern Rock Asset Management, B&B = Bradford and Bingley.

2 NCR = Net Cash Requirement

3 Does not include Net Cash Requirement to Central Government

4 Negative NCR reflects change in financing as from 2014/15 new financing requirements of Network Rail were met through core central government borrowing and are therefore included in main CGNCR.

PSA7D Central Government Net Cash Requirement on own account (receipts and outlays on a cash basis)

£ million

Relationships between columns 1+6+7=8; 9+10+11=12; 12-8=13

1 Comprises payments into the Consolidated Fund and all payovers of NICs excluding those for Northern Ireland.

2 Income tax includes capital gains tax and is gross of any tax credits treated by HM Revenue and Customs (HMRC) as tax deductions.

3 UK receipts net of personal pension rebates; gross of Statutory Maternity Pay and Statutory Sick Pay.

4 Payments into Consolidated Fund.

5 Including some elements of expenditure not separately identified.

6 Mainly comprises privatisation proceeds.

7 Net of certain receipts, and excluding on-lending to local authorities and public corporations.

8 A much more detailed breakdown of tax receipts is available from HMRC at www.gov.uk/government/organisations/hm-revenue-customs

9 NCR = Net Cash Requirement. Without Northern Rock Asset Management & Bradford and Bingley.

10 Gross of tax credits. Includes diverted profit tax.

REC3 Reconciliation of Central Government Net Cash Requirement and Changes in Net Debt

Relationship between columns 14=1+2+3+4+5+6+7+8+9+10+11+12

1 Excluding Northern Rock Asset Management (NRAM), Bradford & Bingley (B&B) and Network Rail (NR) - although cash flows relating to NRAM and B&B are included from October 2014 and for NR from April 2015

2 All adjustments reflect differences between when, and at what value, liabilities and assets are scored in net debt and their related cash flows

3 Includes gilts that are transferred to central government (such as those previously held by the Royal Mail Pension Plan) as well as timing differences where cash flows and debt movements were recorded in adjacent months

4 Includes the impact of imputed finance leases as well as the reclassifications of London Continental Railway and the reorganisation of the Housing Revenue Account
