Source: Office for National Statistics - Index of Private Housing Rental Prices

Notes:

 Data presented are classified as Experimental Statistics. More information can be found in <u>Section 8:</u> <u>Strengths and limitations</u>.

Private rental prices paid by tenants in the UK increased by 2.3% in the 12 months to February 2022, representing the largest annual growth rate since December 2016.

Growth in private rental prices paid by tenants in the UK remained broadly flat between November 2019 and the end of 2020. The beginning of 2021 saw a slowdown in rental price growth, which was driven by prices in London. Growth in private rental prices has increased since the latter part of 2021, with widespread annual growth across all regions, with the exception of London.

In the 12 months to February 2022, rental prices for the UK, excluding London, increased by 3.2%, up from an increase of 3.0% in January 2022. London private rental prices increased by 0.2% in the 12 months to February 2022, up from an increase of 0.1% in January 2022.

London's rental price growth in February 2022 (0.2%) remains the lowest of any of the English regions. This reflects a decrease in demand, such as remote working shifting housing preferences, meaning workers no longer need to be close to offices. It also reflects an increase in supply, such as an excess supply of rental properties as short-term lets change to long-term lets. Further commentary on these movements can be found in Section 4 of our Index of Private Housing Rental Prices, UK: March 2021 bulletin.

The Association of Residential Letting Agents (ARLA) reported in their <u>Private Rented Sector Report, January 2022</u> that there had been a sharp increase in the number of agents reporting an increase in rental prices, with 74% of members in January having said this has affected their stock, compared with 56% in December 2021.

The <u>Royal Institution of Chartered Surveryors' (RICS') February 2022 Residential Market Survey (PDF, 4.8MB)</u> reported that tenant demand is still growing at a solid pace, while the supply of rental properties remains challenged. Consequently, near term rental growth expectations continue to be driven higher.

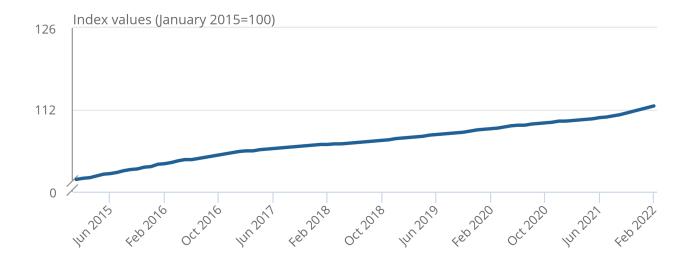

These supply and demand pressures can take time to feed through to the Index of Private Housing Rental Prices (IPHRP), which reflects price changes for all private rental properties rather than only newly advertised rental properties.

3. UK private rental growth rates by country

In England, private rental prices grew by 2.1% in the 12 months to February 2022, representing the highest 12-month growth rate since March 2017. When London is excluded from England, private rental prices increased by 3.1% in the 12 months to February 2022, up from an increase of 3.0% in January 2022, and the highest 12-month growth rate since this series began in 2006.

Private rental prices in Wales grew by 1.4% in the 12 months to February 2022, unchanged from January 2022.

Private rental prices in Scotland grew by 2.6% in the 12 months to February 2022, unchanged from January 2022, and the joint highest annual growth rate since records began in 2012.

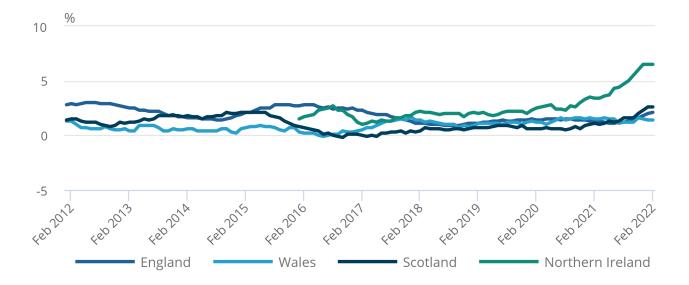

The annual rate of change for Northern Ireland in February 2022 (6.5%) was higher than the other countries of the UK. Northern Ireland data have been copied forward since December 2021; the next update to Northern Ireland data will be in the release published on 22 June 2022.

4. UK private rental growth by English region

Focusing on the English regions, the largest annual rental price increase in the 12 months to February 2022 was in the East Midlands at 3.8%.

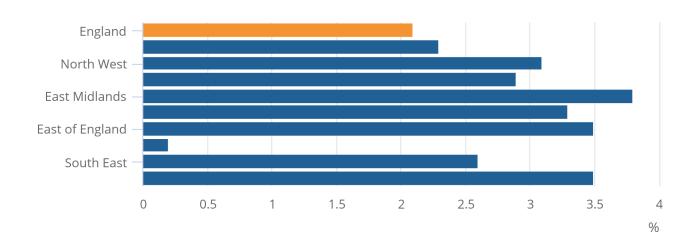

The lowest annual rental price growth was in London, where rental prices increased by 0.2% in the 12 months to February 2022.

5. Private rental data

Index of Private Housing Rental Prices, UK: monthly estimates

Dataset | Released 23 March 2022

Rental price index historical data time series (index values and annual percentage change).

Index of Private Housing Rental Prices, UK: annual weights analysis

Dataset | Released 23 March 2022

Aggregate weights information used in the experimental Index of Private Housing Rental Prices (IPHRP).

Measures of owner occupiers' housing costs

Dataset | Released 24 March 2021

Monthly historical time series for all three approaches to measuring owner occupiers' housing costs – payments, rental equivalence and net acquisitions – including contributions to growth from the different approaches, UK.

Measures of owner occupiers' housing costs: weights analysis

Dataset | Released 24 March 2021

Aggregate inflation measure for owner occupiers' housing costs (OOH). Includes monthly time series and weights for all three approaches of measuring OOH – payments, rental equivalence and net acquisitions – aggregated with the Consumer Price Index (CPI), UK.

6. Glossary

Index of Private Housing Rental Prices (IPHRP)

IPHRP measures the change in the price tenants face when renting residential property from private landlords.

Administrative data

Administrative data are data that people have already provided to the government through day-to-day activities, for example, health records, social security payments or educational attainment information.

7. Measuring the data

Sources

The IPHRP is constructed using administrative data. This means that the index makes use of data that are already collected for other purposes to estimate rental prices. The sources of private rental prices are the VOA, Scottish Government, Welsh Government and Northern Ireland Housing Executive (NIHE). Data for Northern Ireland also include data provided by Propertynews.com

The sources of the annually updated <u>Index of Private Housing Rental Prices</u>, <u>UK</u>: <u>annual weights analysis dataset</u> are the Ministry of Housing, Communities and Local Government (MHCLG), Scottish Government, Welsh Government, NIHE and VOA.

The IPHRP's indices are updated on a monthly basis with the new monthly estimate. Data are indexed with January 2015 as a base year. Data for England are provided from January 2005, data for Wales from January 2009 and data for Scotland from January 2011. UK data are from January 2015.

Coronavirus

We are working to ensure that the UK has the vital information needed to respond to the impact of the coronavirus (COVID-19) pandemic on our economy and society. This includes how we measure the Index of Private Housing Rental Prices (IPHRP). The price collection for this publication has not been affected.

Weights update

As part of this release, the underlying index weights used in the IPHRP production process to aggregate the index have been updated. This is a standard annual update; methodology information can be found in the Index of Private Housing Rental Prices QMI.

Future developments

Following the <u>Digital Economy Act 2017</u>, the Office for National Statistics (ONS) gained access to Valuation Office Agency (VOA) private rental microdata. We aim to redevelop the IPHRP and private rental market summary statistics (PRMS) to produce mix-adjusted average rental prices that are comparable over time. We also aim to refine geography to lower geographic levels, to better meet user needs.

While we have been working hard to finalise the methodology, we will now need to spend more time ensuring the production system is developed on a strategic platform and is sustainable. This has resulted in our initial timetable being out of date. More information and an updated timetable for these developments is available in the <u>Private rental prices development plan: February 2022</u>. If you have any queries or feedback on these developments, please email hpi@ons.gov.uk.

An overview of the methodology that we intend to use for the redevelopment of private rental prices statistics, is due to be published on 25 March 2022.

Economic statistics governance after EU exit

Following the UK's exit from the EU, new governance arrangements are being put in place that will support the adoption and implementation of high-quality standards for UK economic statistics. These governance arrangements will promote international comparability and add to the credibility and independence of the UK's statistical system.

At the centre of this new governance framework will be the new National Statistician's Committee for Advice on Standards for Economic Statistics (NSCASE). NSCASE will support the UK by ensuring its processes for influencing and adopting international statistical standards are world leading. The advice NSCASE provides to the National Statistician will span the full range of domains in economic statistics, including the National Accounts, fiscal statistics, prices, trade and the balance of payments and labour market statistics.

8. Strengths and limitations

Strengths

The Index of Private Housing Rental Prices (IPHRP) is constructed using large administrative sources, specified in <u>Section 7: Measuring the data</u>. Annually, over 450,000 private rental prices are collected in England, 30,000 in Wales, 25,000 in Scotland and 15,000 in Northern Ireland.

The index not only measures the change in newly advertised rental prices but reflects price changes for all private rental properties.

Limitations

The IPHRP is published as price indices, rather than average prices. It is also only published down to a country and regional level. While actual rental prices cannot currently be published in the IPHRP because of data access constraints, we are actively working to acquire the necessary data.

The IPHRP is released as an Experimental Statistic, and is subject to revisions if improvements in the methodology are identified. Results should be interpreted with this in mind.

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in the <u>Index of Private Housing Rental Prices QMI</u>.
