19 August 2020

## Table of contents

1. [Main points](#)
2. [UK private rental prices](#)
3. [UK private rental growth rates by country](#)
4. [UK private rental growth by English regions](#)
5. [Comparisons to private sector rental growth measures](#)
6. [Private rental data](#)
7. [Glossary](#)
8. [Measuring the data](#)
9. [Strengths and limitations](#)
10. [Related links](#)

# 1 . Main points

- Private rental prices paid by tenants in the UK rose by 1.5% in the 12 months to June 2020, unchanged since April 2020.
- Private rental prices grew by 1.5% in England, 1.4% in Wales and 0.6% in Scotland in the 12 months to June 2020.
- London private rental prices rose by 1.2% in the 12 months to June 2020.
- The Office for National Statistics (ONS) has released a [public statement](#) on the coronavirus (COVID-19) and the production of statistics; [Section 8: Measuring the data](#) describes the situation in relation to the Index of Private Housing Rental Prices (IPHRP).

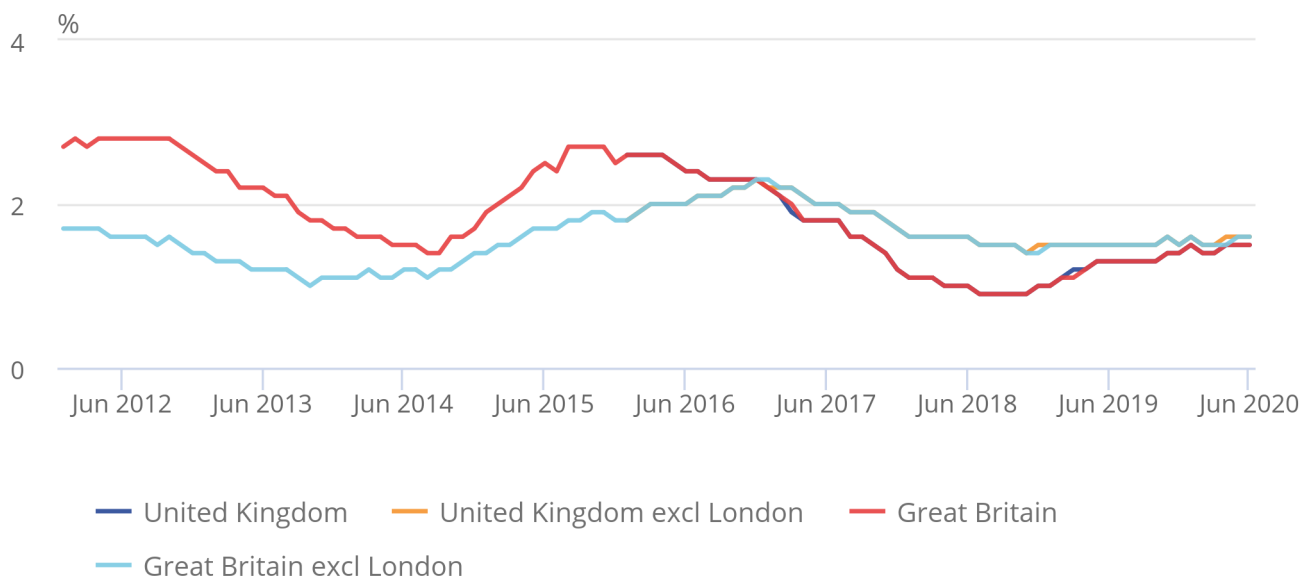

# 2 . UK private rental prices

**Figure 1: The UK's annual private rental price growth has remained between 1.4% and 1.5% since November 2019**

Index of Private Housing Rental Prices percentage change over 12 months, UK and Great Britain, January 2012 to June 2020

Figure 1: The UK's annual private rental price growth has remained between 1.4% and 1.5% since November 2019

Index of Private Housing Rental Prices percentage change over 12 months, UK and Great Britain, January 2012 to June 2020

Source: Office for National Statistics – Index of Private Housing Rental Prices

Notes:

1. Data presented in this dataset are classified as Experimental Statistics and subject to revisions if improvements in the methodology are identified. Results should be interpreted with this in mind.

Private rental prices paid by tenants in the UK increased by 1.5% in the 12 months to June 2020, unchanged since April 2020. For example, a property that was rented for £500.00 per month in June 2019 that had a rent increase of the average UK rate would be rented for £507.50 in June 2020.

Growth in private rental prices paid by tenants in the UK has generally slowed since the beginning of 2016, driven mainly by a slowdown in London over the same period. Rental growth has started to pick up since the end of 2018, driven by strengthening growth in London. Rental growth has remained broadly flat since November 2019.

In the 12 months to June 2020, rental prices for the UK excluding London increased by 1.6%, unchanged since April 2020 (Figure 1). London private rental prices increased by 1.2% in the 12 months to June 2020.

The Association of Residential Letting Agents (ARLA) reported in their [Private Rented Sector Report, May 2020](#) that demand from prospective tenants fell from February but still hit a record high for the month of May. The number of tenants experiencing rent increases fell to the lowest on record.

The [Royal Institution of Chartered Surveyors' \(RICS\) June 2020 Residential Market Survey](#) reported that tenant demand returned to growth for the first time in three reports and landlord instructions were broadly steady at the headline level in June 2020.

These supply and demand pressures can take time to feed through to the Index of Private Housing Rental Prices (IPHRP), which reflects price changes for all private rental properties, rather than only newly advertised rental properties.

Focusing on the long-term trend, between January 2015 and June 2020, private rental prices in the UK increased by 9.3% (Figure 2).

### Notes:

1. Data presented in this dataset are classified as Experimental Statistics and subject to revisions if improvements in the methodology are identified. Results should be interpreted with this in mind.

## 3 . UK private rental growth rates by country

In England, private rental prices grew by 1.5% in the 12 months to June 2020, unchanged since April 2020. When London is excluded from England, privately rented properties increased by 1.7% in the 12 months to June 2020, unchanged since May 2020.

Private rental prices in Wales grew by 1.4% in the 12 months to June 2020, up from 1.2% in the 12 months to May 2020.

Rental growth in Scotland increased by 0.6% in the 12 months to June 2020, unchanged from the 12 months to May 2020. Scotland's rental growth has remained weaker than that of the rest of the UK since August 2016.

The annual rate of change for Northern Ireland in June 2020 (2.6%) was higher than that of the other countries of the UK. Northern Ireland data have been copied forward since March 2020; the next update to Northern Ireland data will be in the release published on 16 September 2020. The Northern Ireland annual growth rate has remained broadly consistent (around 2%) since 2018. However, in recent months there has been an increase in the annual growth rate.

**Figure 3: The annual rental growth in Scotland has been lower than other countries of the UK since August 2016**

Notes:

1. Data presented in this dataset are classified as Experimental Statistics and subject to revisions if improvements in the methodology are identified. Results should be interpreted with this in mind.
2. Northern Ireland data are only available every three months. Northern Ireland data are copied forward until the next data are obtainable, which will be in the August 2020 bulletin released on 16 September 2020.

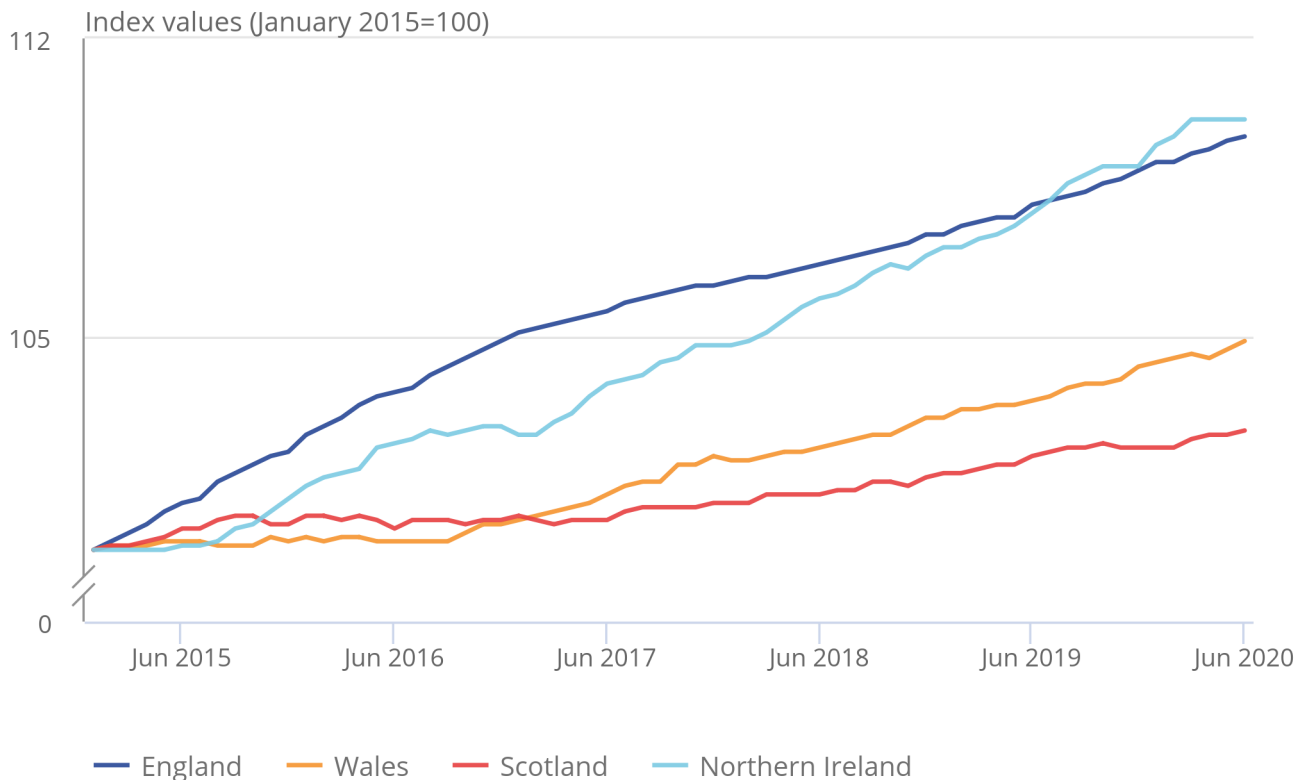

All UK countries experienced a rise in their private rental prices between January 2015 and June 2020, with rental prices in England and Northern Ireland increasing more than those in Wales and Scotland across the time series (Figure 4).

Notes:

1. Data presented in this dataset are classified as Experimental Statistics and subject to revisions if improvements in the methodology are identified. Results should be interpreted with this in mind.
2. Northern Ireland data are only available every three months. Northern Ireland data are copied forward until the next data are obtainable, which will be in the August 2020 bulletin released on 16 September 2020.

## 4 . UK private rental growth by English regions

Focusing on the English regions, the largest annual rental price increase in the 12 months to June 2020 was in the South West, at 2.5%, unchanged since May 2020 (Figure 5). This was followed by the East Midlands, at 2.3%.

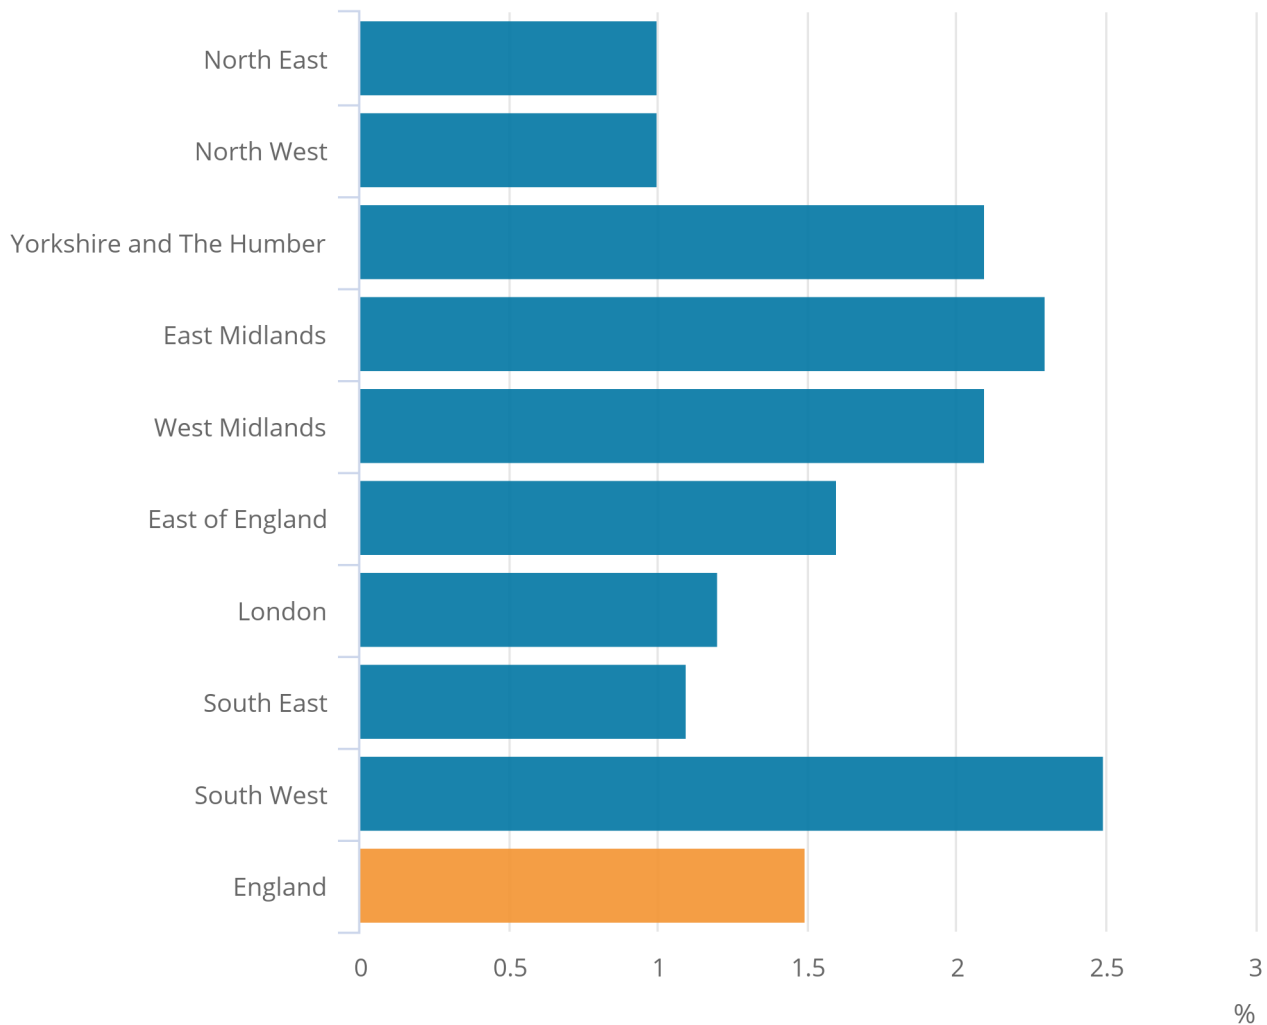

The lowest annual rental price growth in the 12 months to June 2020 was in the North East (1.0%, up from 0.8% in May 2020) and the North West (1.0%, unchanged since May 2020).

Notes:

1. The grey line shows England’s 12-month average private rental price growth.

## 5 . Comparisons to private sector rental growth measures

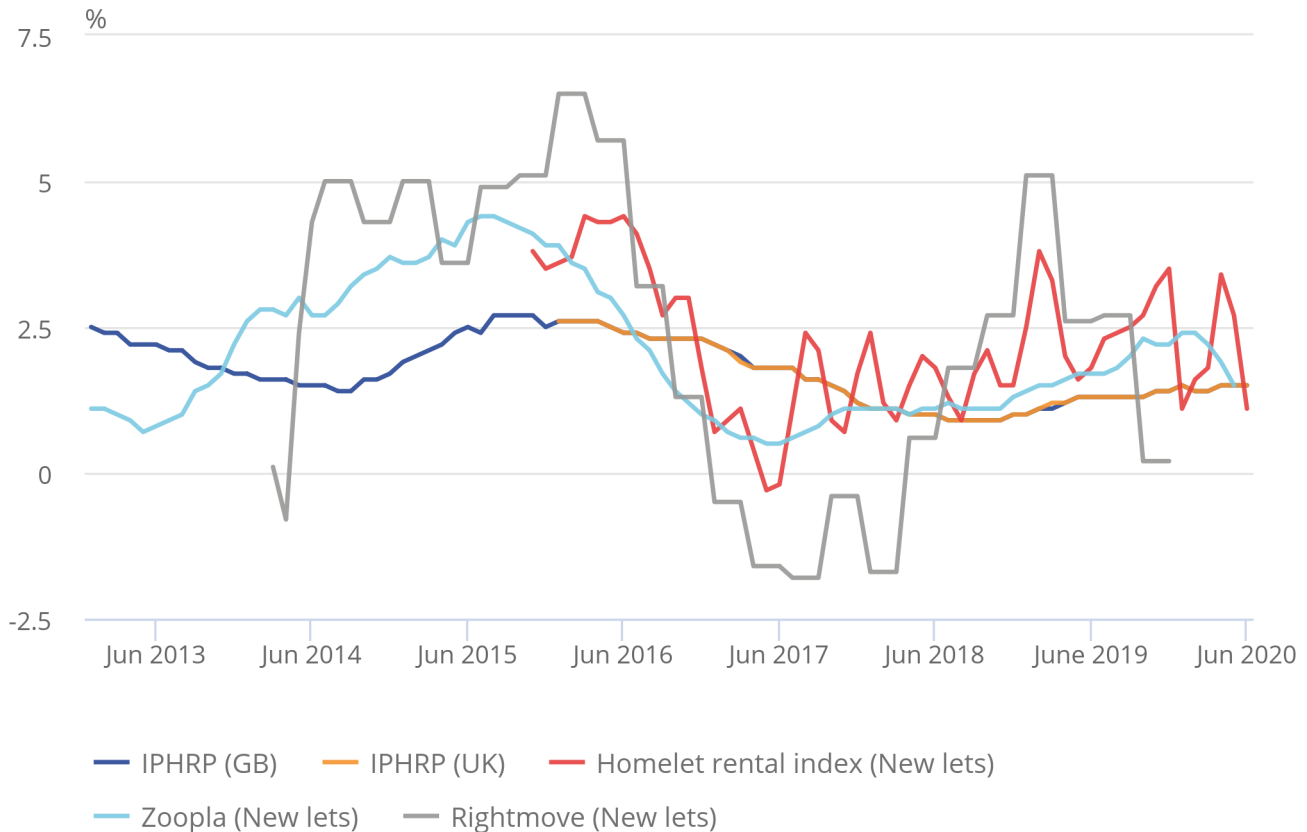

Many private sector organisations, including estate agents and property companies, produce estimates of changes in rental prices. These include Zoopla, Rightmove and HomeLet. Countrywide PLC, LSL Property Services and Your Move have discontinued private rental price indices. These sources provide an extensive range of rental data, but a closer look at these rental measures provides a diverse picture.

## Figure 7: Index of Private Housing Rental Prices measure is more stable

Index of Private Housing Rental Prices and private sector measures of rents, percentage change over 12 months, January 2013 to June 2020, UK

### Figure 7: Index of Private Housing Rental Prices measure is more stable

Index of Private Housing Rental Prices and private sector measures of rents, percentage change over 12 months, January 2013 to June 2020, UK

Source: Homelet, Zoopla, Rightmove and Index of Private Housing Rental Prices

Historically, the rent increases measured by the private sector measures have differed to those shown in the Index of Private Housing Rental Prices (IPHRP) and some tend to be more volatile. This is because the private sector measures primarily focus on newly let properties, while the IPHRP includes a mixture of newly let properties and existing lets. This is important, as evidence obtained from Valuation Office Agency (VOA) rental officers suggests that the greatest price rises occur when properties are newly let, compared with existing tenants, who tend to see smaller price increases. This means supply and demand pressures can take time to feed through to the IPHRP.

Details on the research conducted by the VOA and further information on Zoopla, Rightmove, Homelet, LSL Property Services plc or Your Move, Countrywide plc and IPHRP data sources and their differences is available in the [Private rental growth measures, a UK comparison: October to December 2019](#) publication.

## 6 . Private rental data

[Index of Private Housing Rental Prices, UK: annual weights analysis](#)

Dataset | Released 25 March 2020

Aggregate weights information used in the [experimental](#) Index of Private Housing Rental Prices (IPHRP).

[Index of Private Housing Rental Prices, UK: monthly estimates](#)

Dataset | Released 15 July 2020

Rental price index historical time series (index values and annual percentage change).

## 7 . Glossary

### Index of Private Housing Rental Prices (IPHRP)

The Index of Private Housing Rental Prices (IPHRP) measures the change in the price tenants face when renting residential property from private landlords.

### Administrative data

Administrative data are data that people have already provided to the government through day-to-day activities, for example, health records, social security payments or educational attainment information.

## 8 . Measuring the data

### Coronavirus (COVID-19)

The Office for National Statistics (ONS) is working to ensure that the UK has the vital information needed to respond to the impact of the coronavirus (COVID-19) pandemic on our economy and society; this includes how we measure the Index of Private Housing Rental Prices (IPHRP). At present, the price collection for this publication has been slightly affected, but this has not impacted the reliability of our estimates. A small change was made to how the data are collected in England; Tenancy Deposit Protection data have been used for less than 1% of the data in June 2020.

The ONS remains committed to providing the best and most accurate information we can, serving the public good at a time when it is needed the most. As this situation evolves, we are developing several solutions to meet potential scenarios, depending on the amount of data that are able to be collected by our data suppliers, and to consider how we produce forthcoming publications. Users will be informed of any changes to how the data are measured.

The ONS has released a [public statement](#) on the coronavirus and the production of statistics. Specific queries must be directed to the [Media Relations Office](#).

## After EU withdrawal

As the UK leaves the EU, it is important that our statistics continue to be of high quality and are internationally comparable. During the transition period, those UK statistics that align with EU practice and rules will continue to do so in the same way as before 31 January 2020.

After the transition period, we will continue to produce our inflation statistics in line with the UK Statistics Authority's [Code of Practice for Statistics](#) and in accordance with internationally agreed statistical guidance and standards.

## Sources

The IPHRP is constructed using administrative data. This means that the index makes use of data that are already collected for other purposes to estimate rental prices. The sources of private rental prices are the Valuation Office Agency (VOA), Scottish Government, Welsh Government and Northern Ireland Housing Executive (NIHE). Data for Northern Ireland also include data provided by [Propertynews.com](#). Estimates are based on a known sample rather than a census.

The sources of the annually updated [expenditure weights](#) are the Ministry of Housing, Communities and Local Government (MHCLG), Scottish Government, Welsh Government, NIHE and VOA.

The IPHRP's indices are updated on a monthly basis with the new monthly estimate. Data are indexed with January 2015 as a base year. Data for England are provided from January 2005, data for Wales from January 2009 and data for Scotland from January 2011. UK data are from January 2015.

## Quality

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in the [IPHRP QMI](#).

# 9 . Strengths and limitations

## Strengths

The Index of Private Housing Rental Prices (IPHRP) is constructed using large administrative sources, specified in [Section 8: Measuring the data](#). Annually, over 450,000 private rental prices are collected in England, 30,000 in Wales, 25,000 in Scotland and 15,000 in Northern Ireland.

The index does not only measure the change in newly advertised rental prices but reflects price changes for all private rental properties.

## Limitations

The IPHRP is published as price indices rather than average prices. It is also only published down to a country and regional level. While actual rental prices cannot currently be published in the IPHRP because of data access constraints, we are actively working to acquire the necessary data.

The IPHRP is released as an [Experimental Statistic](#).
