Notice

30 September 2016

Following a quality review it has been identified that the methodology used to estimate elements of purchased software within gross fixed capital formation (GFCF) has led to some double counting from 1997 onwards. When this issue is amended in The Blue Book 2017 it will reduce the level of GFCF across the period by around 1.1% per year. The average impact on quarter-on-quarter GFCF growth is negative 0.02% and the average impact on quarter-on-quarter GDP growth is 0.00%.

13. [Background notes](#)

1 . Main points

Annually for 2015, the central government, local government, financial corporations and households and non-profit institutions serving households (NPISH) sectors were net borrowers. The public corporations, private non-financial corporations and rest of the world sectors were net lenders. Compared with 2014, the local government and households and NPISH sectors switched from net lenders to net borrowers. All other sectors remain unchanged.

In Quarter 1 (Jan to Mar) 2016, the central government, local government, financial corporations and households and NPISH sectors were net borrowers. The public corporations, private non-financial corporations and rest of the world sectors were net lenders. Compared with the previous quarter, public corporations and private non-financial corporations switched from net borrowers to net lenders. All other sectors remain unchanged.

Households and NPISH net borrowing increased in Quarter 1 (Jan to Mar) 2016 to £4.4 billion from net borrowing of £4.3 billion in the previous quarter.

Private non-financial corporations switched from net borrowing of £58 million in Quarter 4 (Oct to Dec) 2015 to net lending of £1.1 billion in Quarter 1 (Jan to Mar) 2016.

The level of real households and NPISH disposable income (RHDI) increased by 3.5% in 2015, following an increase of 1.5% in 2014. This is the highest annual increase in the level of RHDI since 2001, when it increased by 4.7%.

The level of real households and NPISH disposable income (RHDI) increased by 2.0% in Quarter 1 (Jan to Mar) 2016, following a decrease of 0.5% in the previous quarter.

For 2015, the households and NPISH saving ratio was 6.1%, compared with 6.8% in 2014. This is the lowest annual saving ratio since 2008, when it was 5.4%.

The households and NPISH saving ratio for Quarter 1 (Jan to Mar) 2016 was 5.9%, compared with 5.8% in the previous quarter.

2 . About this release

This bulletin, Quarterly Sector Accounts, is part of a developmental programme to improve coverage of the sector and financial accounts and we would welcome your feedback (background note 1). It was first published on 30 March 2016 to present main economic indicators and summary estimates from the institutional sectors of the UK economy: non-financial corporations, financial corporations, central and local government, households and NPISH that are presented in the UK Economic Accounts (UKEA) dataset.

This latest bulletin provides estimates consistent with our annual National Accounts Blue Book publication, to be published on 29 July 2016. An article, [Detailed assessment of the changes to the sector and financial accounts](#) was published on 7 June 2016 giving details of the changes implemented for Blue Book 2016.

The UKEA provides detailed estimates of national product, income and expenditure, UK sector non-financial and financial accounts and UK balance of payments. The Quarterly Sector Accounts and the UKEA are published at quarterly, pre-announced intervals alongside the Quarterly National Accounts and Quarterly Balance of Payments statistical bulletins. These accounts are the underlying data that produce a single estimate of gross domestic product (GDP) using income, production and expenditure data.

The accounts are fully integrated, but with a statistical discrepancy, known as the statistical adjustment, shown for each sector account. This reflects the difference between the sector net borrowing or lending from the non-financial account and the identified borrowing or net lending in the financial accounts, which should theoretically be equal but differ due to different data sources and measurement practices.

If you extract data from our website you will notice that some new series have been added for social transfers in kind, and that the identifier codes have changed for central government non-market output and local government non-market output. A full list of the new series is available in the [UK Economic Accounts](#).

Users of the Quarterly Sector Accounts and UK Economic Accounts

UK Economic Accounts (UKEA) has a broad range of users. These include other government departments, the Bank of England (BoE), Office for Budget Responsibility (OBR), knowledge and research institutions, financial and non-financial corporations, journalists, the general public, and international institutions.

The data are widely used by government departments to inform and monitor the effect of policy decisions. UKEA data also aid an assessment of the economy: informing the Bank of England's Monetary Policy Committee (MPC) discussions when setting monetary policy and the OBR's forecasts and evaluations of economic growth and public sector finances. The data is also used by knowledge and research institutions such as think-tanks, lobby groups and universities and by researchers, analysts, academics, students and trade organisations.

The UKEA also provides businesses with important statistics and often form the basis on which journalists publish reports and articles. Data series commonly of interest include real household disposable income, gross saving, the household saving ratio, financial wealth and balance of payments data. The UKEA also contains useful information on the holdings of debt for each sector of the economy.

Main users of the UKEA outside of the UK include international bodies such as Eurostat, the European Central Bank (ECB), the Organisation for Economic Cooperation and Development (OECD) and The World Bank.

3 . Real households and non-profit institutions serving households (NPISH) disposable income (RHDI)

For the year 2015, real households and NPISH disposable income increased by 3.5% following an increase of 1.5% in 2014. This is the highest annual increase in the level of real households and NPISH disposable income since 2001, when it increased by 4.7%.

This latest annual rise reflects an increase of 3.7% in nominal gross disposable income partially offset by a 0.3% rise in the households and NPISH final consumption deflator. This increase in nominal gross disposable income was predominantly due to rises in wages and salaries of £28.9 billion, net social benefits other than social transfers in kind of £13.7 billion, together with a rise in gross operating surplus and mixed income of £10.5 billion, partially offset by a rise in taxes on income and wealth of £9.8 billion and a fall in net property income of £3.4 billion.

The level of real households and NPISH disposable income increased by 2.0% in Quarter 1 (Jan to Mar) 2016, following a decrease of 0.5% in the previous quarter (Figure 1).

Figure 1: UK real households and non-profit institutions serving households disposable income, quarter on quarter

Quarter 2 (Apr to June) 2012 to Quarter 1 (Jan to Mar) 2016

Source: Office for National Statistics

The rise in the latest quarter is due to the 2.0% rise in nominal gross disposable income with no effect from the households and NPISH final consumption deflator. This increase in nominal gross disposable income was driven by a rise in net social benefits other than transfers in kind of £5.2 billion, a rise in net property income of £2.8 billion, gross operating surplus and mixed income of £0.8 billion and a rise in wages and salaries of £0.5 billion, partially offset by a rise in taxes on income and wealth of £2.9 billion.

Figure 2 shows the main components contributing to the quarterly movement of gross disposable income.

Figure 2: UK households and non-profit institutions serving households main gross disposable income components

Quarter 2 (Apr to June) 2012 to Quarter 1 (Jan to Mar) 2016

Source: Office for National Statistics

4 . Households and non-profit institutions serving households (NPISH) saving ratio

Gross saving estimates the difference between households and NPISH total available resources (mainly wages received, revenue of the self-employed, social benefits and net income such as interest on savings and dividends from shares, but excluding taxes on income and wealth) and their current consumption (expenditure on goods and services).

All of the components that make up gross saving and total available resources and in fact all sector accounts data apart from real households' disposable income (RHDI), are estimated in current prices (CP). These are sometimes known as nominal prices, meaning that they include the effects of price changes.

The saving ratio is published in the UK Economic Accounts (UKEA) as non-seasonally adjusted (NSA) and seasonally adjusted (SA) formats, with the latter removing seasonal effects to allow comparisons over time. However, the saving ratio can be volatile and is sensitive to even relatively small movements to its components, particularly on a quarterly basis. This is because gross saving is a small difference between 2 numbers. It is therefore often revised at successive publications when new or updated data are included.

Annually for 2015, the saving ratio was 6.1%, compared with 6.8% in 2014. The fall in the saving ratio in 2015 reflects a rise in final consumption expenditure of £33.2 billion, a rise in taxes on income and wealth of £9.8 billion and a fall in net property income of £3.4 billion, partially offset by a rise in wages and salaries of £28.9 billion and a rise in gross operating surplus and mixed income of £10.5 billion.

The saving ratio for Quarter 1 (Jan to Mar) 2016 was 5.9%, compared with 5.8% in the previous quarter. The rise in the saving ratio in Quarter 1 (Jan to Mar) 2016 reflects rises in net property income of £2.8 billion, compensation of employees of £2.1 billion and other small movements in the accounts, partially offset by a rise in taxes on income and wealth of £2.9 billion and a rise in final consumption expenditure of £2.5 billion.

Figure 4 shows the main components contributing to the quarterly saving ratio movement.

Figure 4: UK main households and non-profit institutions serving households quarterly saving ratio components

Quarter 2 (Apr to June) 2012 to Quarter 1 (Jan to Mar) 2016

Source: Office for National Statistics

Annually, the saving ratio has been revised up from 5.4% to 6.8% for 2014 and from 4.2% to 6.1% for 2015. On a quarterly basis, the saving ratio has been revised up from 3.8% to 5.8% for Quarter 4 (Oct to Dec) 2015. The quarterly and annual upward revisions to the saving ratio are primarily due to upward revisions to gross operating surplus and wages and salaries exceeding the upward revisions to household expenditure.

The saving ratio was on a broadly downward trend until 2013. The saving ratio fell from 12.1% in Quarter 2 (Apr to June) 1997 to 4.3% prior to the onset of the economic downturn in Quarter 1 (Jan to Mar) 2008.

Between Quarter 2 (Apr to June) 2009 and Quarter 4 (Oct to Dec) 2010, the saving ratio rose sharply, peaking at 11.5% in Quarter 1 (Jan to Mar) 2010. During this time, households experienced greater economic and financial uncertainty which typically results in households decreasing expenditure and increasing their level of saving.

Following the economic downturn, the saving ratio was slightly lower between Quarter 1 (Jan to Mar) 2011 and Quarter 3 (July to Oct) 2012, before falling noticeably once more to 5.8% in Quarter 1 (Jan to Mar) 2013.

Quarterly growth in final consumption expenditure averaged 0.9% between Quarter 4 (Oct to Dec) 2012 and Quarter 1 (Jan to Mar) 2016, exceeding the average quarterly growth in total resources of 0.6% over the same period. This has led to a relatively stable saving ratio, averaging 6.5% between Quarter 4 (Oct to Dec) 2012 and Quarter 1 (Jan to Mar) 2016.

5 . Net lending (+) and net borrowing (-) by sector

Annually for 2015, the central government, local government, financial corporations and households and non-profit institutions serving households (NPISH) sectors were net borrowers. The public corporations, private non-financial corporations and rest of the world sectors were net lenders.

Compared with 2014, local government and households and NPISH switched from net lenders to net borrowers. All other sectors remain unchanged.

In Quarter 1 (Jan to Mar) 2016, the central government, local government, financial corporations and households and NPISH sectors were net borrowers. The public corporations, private non-financial corporations and rest of the world sectors were net lenders.

Compared with the previous quarter, public corporations and private non-financial corporations switched from net borrowers to net lenders. All other sectors remain unchanged.

Source: Office for National Statistics

Notes:

- Please note abbreviations are: CG - Central government LG - Local government PC - Public corporations FC - Financial corporations PNFCs - Private non-financial corporations HH and NPISH - Households and non-profit institutions serving households RW - Rest of the world

6 . Households and non-profit institutions serving households (NPISH)

Annually for 2015, households and non-profit institutions serving households (NPISH) net borrowing was £10.9 billion, following net lending of £0.3 billion in 2014. This switch to net borrowing was mainly due to rises in final consumption expenditure of £33.2 billion, taxes on income and wealth of £9.8 billion, gross capital formation of £4.8 billion and a fall in net property income of £3.4 billion, partially offset by rises in compensation of employees of £30.1 billion and gross operating surplus and mixed income of £10.5 billion.

Households and non-profit institutions serving households (NPISH) net borrowing was £4.4 billion in Quarter 1 (Jan to Mar) 2016, following net borrowing of £4.3 billion in Quarter 4 (Oct to Dec) 2015. This increase in net borrowing was mainly due to a rise in taxes on income and wealth of £2.9 billion, a rise in final consumption expenditure of £2.5 billion and a rise in gross capital formation of £1.3 billion, partially offset by rises in compensation of employees of £2.1 billion and net property income of £2.8 billion.

On an annual basis, households and NPISH net borrowing has been revised from net borrowing of £41.4 billion to net borrowing of £10.9 billion for 2015. The decreased net borrowing is due to upward revision to gross operating surplus and mixed income of £21.5 billion, compensation of employees of £8.2 billion, a downward revision to gross fixed capital formation of £4.4 billion and an upward revision to net property income of £2.8 billion, partially offset by an upward revision to final consumption expenditure of £6.8 billion.

On a quarterly basis, households and NPISH net borrowing has been revised from net borrowing of £12.3 billion to net borrowing of £4.3 billion for Quarter 4 (Oct to Dec) 2015. The same components are the main drivers of the revisions to the quarterly data as the annual for households and NPISH net borrowing in Quarter 4 (Oct to Dec) 2015.

Figure 7: UK households and NPISH net lending (+) / net borrowing (-) contributions to change

Quarter 2 (Apr to June) 2012 to Quarter 1 (Jan to Mar) 2016

Source: Office for National Statistics

7. Private non-financial corporations (PNFCs)

Annually for 2015, private non-financial corporations' net lending was £18.9 billion, following net lending of £33.0 billion in 2014. This decrease in net lending was mainly due to a fall in net property income of £15.9 billion and a rise of £2.1 billion in gross capital formation, partially offset by a rise of £4.7 billion in gross operating surplus.

Private non-financial corporations' net lending was £1.1 billion in Quarter 1 (Jan to Mar) 2016, following net borrowing of £58 million in the previous quarter. The switch to net lending is mainly due to increase in gross operating surplus of £3.5 billion and a decrease in gross capital formation of £1.2 billion, partially offset by a decrease in net property income of £3.5 billion.

Annually for 2015, private non-financial corporations' net lending has been revised from £32.3 billion to £18.9 billion. The revision is due to a decrease in gross operating surplus of £9.9 billion and an increase in gross capital formation of £7.5 billion, offset by an increase in net property income of £4.0 billion.

On a quarterly basis, private non-financial corporations has been revised from net lending of £5.1 billion to net borrowing of £58 million for Quarter 4 (Oct to Dec) 2015. This is mainly due to a fall in gross operating surplus of £3.7 billion and an increase in gross capital formation of £1.9 billion, offset by an upward revision to net property income of £0.5 billion.

Figure 8: Private non-financial corporations' net lending (+) / net borrowing (-) contributions to change

Quarter 2 (Apr to June) 2012 to Quarter 1 (Jan to Mar) 2016

Source: Office for National Statistics

8 . Financial corporations

Annually for 2015, financial corporations' net borrowing was £25.5 billion, following net borrowing of £17.9 billion in 2014. This increase in net borrowing was mainly due to a fall in gross operating surplus of £3.7 billion and a rise in gross capital formation of £3.4 billion.

Financial corporations' net borrowing was £9.1 billion in Quarter 1 (Jan to Mar) 2016, following net borrowing of £9.9 billion in the previous quarter. This reduction in net borrowing was driven by a £1.2 billion increase in net property income, partially offset by a rise in gross capital formation of £0.3 billion.

On an annual basis, financial corporations' net borrowing has been revised from net borrowing of £11.0 billion to net borrowing of £25.5 billion for 2015. The upward revision to financial corporations' net borrowing in 2015 is attributable to downward revisions to net property income of £8.8 billion and gross operating surplus of £6.8 billion, partially offset by a downward revision to gross capital formation of £1.1 billion.

On a quarterly basis, financial corporations' net borrowing has been revised from £4.8 billion to net borrowing of £9.9 billion in Quarter 4 (Oct to Dec) 2015. This is mainly due to downward revisions in net property income of £3.7 billion and gross operating surplus of £1.5 billion, offset by small revisions across the accounts.

Figure 9: Financial corporations' net lending (+) / net borrowing (-) contributions to change

Quarter 2 (Apr to June) 2012 to Quarter 1 (Jan to Mar) 2016

Source: Office for National Statistics

9 . Central government

Annually for 2015, central government net borrowing was £77.5 billion, following net borrowing of £101.9 billion in 2014. This decrease in net borrowing was mainly due to rises in taxes on income and wealth of £11.8 billion, taxes on production of £6.8 billion, social contributions of £6.5 billion and net property income of £6.0 billion, partially offset by rise in social benefits other than those kind of £4.7 billion, subsidies of £1.5 billion and a fall in net capital transfers of £0.7 billion.

Central government net borrowing was £14.3 billion in Quarter 1 (Jan to Mar) 2016, following net borrowing of £18.2 billion in the previous quarter. This decrease in net borrowing was mainly driven by rises in net other current transfers of £4.4 billion and taxes on income and wealth of £2.5 billion, partially offset by a rise in final consumption expenditure of £0.9 billion and a fall in net capital transfers of £0.6 billion.

Figure 10: Central government net lending (+) / net borrowing (-) contributions to change

Quarter 2 (Apr to June) 2012 to Quarter 1 (Jan to Mar) 2016

Source: Office for National Statistics

10 . Local government

Annually, for 2015, local government net borrowing was £3.1 billion, following net lending of £0.1 billion in 2014. This was driven by falls in net current transfers of £3.4 billion and net capital transfers of £1.2 billion, partially offset by a fall in final consumption expenditure of £1.6 billion and a rise in taxes on income and wealth of £0.8 billion.

For 2015 annually, local government net borrowing was £3.1 billion revised from £3.9 billion in 2014, this was mainly due to small changes throughout the accounts.

Local government net borrowing was £2.2 billion in Quarter 1 (Jan to Mar) 2016, compared with net borrowing of £0.7 billion in the previous quarter. This was driven by a £2.9 billion decrease in other current transfers, offset by a £0.8 billion increase in net capital transfers and other small movements across the accounts.

Figure 11: Local government net lending (+) / net borrowing (-) contributions to change

Quarter 2 (Apr to June) 2012 to Quarter 1 (Jan to Mar) 2016

Source: Office for National Statistics

11 . Public corporations

Annually, for 2015, public corporations' net lending was £0.6 billion, following net lending of £0.9 billion in 2014. This was mainly driven by rises in net acquisitions less disposals of non-produced non-financial assets of £0.5 billion and gross capital formation of £0.4 billion, partially offset by a rise in net capital transfers of £0.7 billion.

For Quarter 1 (Jan to Mar) 2016 public corporations switched to net lending of £0.1 billion compared with the previous quarter, where it was a net borrower of £33 million. This switch to net lending was mainly driven by a rise in net acquisitions of non-produced non-financial assets of £0.3 billion and a rise in gross operating surplus of £0.2 billion, partially offset by a fall in net capital transfers of £0.3 billion.

Figure 12: Public corporations' net lending (+) / net borrowing (-) contributions to change

Quarter 2 (Apr to June) 2012 to Quarter 1 (Jan to Mar) 2016

Source: Office for National Statistics

12 . Rest of the world

Annually, for 2015, rest of the world net lending was £101.4 billion, following net lending of £85.4 billion in 2014. This was driven by increases in net property income of £13.1 billion and external balance of goods and services of £2.3 billion, offset by a decrease in net other current transfers of £0.7 billion.

Rest of the world net lending was £32.4 billion in Quarter 1 (Jan to Mar) 2016, following net lending of £34.4 billion in the previous quarter. This was driven by a fall in net current transfers of £1.6 billion and net capital transfers of £0.6 billion, offset by a £0.4 billion increase in the external balance of goods and services.

United Kingdom Economic Accounts

Quarter 1 2016

Edition No.: 94
Editor: Michael Rizzo
Office for National Statistics

ISSN 2040–1604

A National Statistics publication

National Statistics are produced to high professional standards set out in the [Code of Practice](#) for Official Statistics. They are produced free from political influence.

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

About us

The Office for National Statistics

The Office for National Statistics (ONS) is the executive office of the UK Statistics Authority, a non-ministerial department which reports directly to Parliament. ONS is the UK government's single largest statistical producer. It compiles information about the UK's society and economy, and provides the evidence-base for policy and decision-making, the allocation of resources, and public accountability. The Director-General of ONS reports directly to the National Statistician who is the Authority's Chief Executive and the Head of the Government Statistical Service.

The Government Statistical Service

The Government Statistical Service (GSS) is a network of professional statisticians and their staff operating both within the Office for National Statistics and across more than 30 other government departments and agencies.

UK Economic Accounts

Coverage: **UK**

Date: **30 June 2016**

Geographical Area: **UK**

Theme: **Economy**

Overview of the UK Economic Accounts

The UK Economic Accounts (UKEA) provides detailed estimates of national product, income and expenditure, UK sector accounts and UK balance of payments. UKEA is published at quarterly, [pre-announced](#) intervals alongside the [Quarterly National Accounts](#) and quarterly [Balance of Payments](#) statistical bulletins.

The UKEA includes income, capital and financial accounts which are produced for non-financial corporations, financial corporations, central government, local government and households and non-profit institutions serving households (NPISH) sectors, and for the UK. Financial transactions and balance sheets are produced for the rest of the world sector in respect of its dealings with the UK. These accounts are the underlying data that produce a single estimate of gross domestic product (GDP) using income, production and expenditure data.

The accounts are fully integrated, but with a statistical discrepancy, known as the statistical adjustment, shown for each sector account. This reflects the difference between the sector net borrowing or lending from the capital account and the identified borrowing or lending in the financial accounts, which should theoretically be equal.

The integrated economic accounts

The integrated [economic accounts](#) of the UK provide an overall view of the economy. The accounts present a summary view of the accounts, balancing items and main aggregates and shows how they are expressed.

The accounts are grouped into 4 main categories

- the goods and services accounts
- current accounts
- accumulation accounts
- balance sheets.

All the above accounts appear in the annual UK [National Accounts](#) (Blue Book) [publication](#). Due to time constraints and availability of data, the quarterly UKEA does not publish the goods and services

account, or the first account of the current accounts (the production account), but the remaining accounts (Accounts II to V) are published.

Further information can be found in [an introduction to UK sector accounts](#)

1. Current account

a. The distribution and use of income accounts (Account II)

The distribution and use of income account shows the distribution of current income (value added) carried forward from the production account and has saving as its balancing item (B.8). Saving is the difference between income (disposable income) and expenditure (or final consumption).

The distribution of income is broken down into 3 sub-accounts

- the primary distribution of income
- the secondary distribution of income
- the redistribution of income in kind.

i. The primary distribution of income account

Primary incomes are accrued to institutional units due to their involvement in production or their ownership of productive assets, including:

- property income (from lending or renting assets)
- taxes on production and imports.

And excluding:

- taxes on income or wealth
- social contributions/benefits
- other current transfers.

The primary distribution of income shows the way these are distributed among institutional units and sectors. The primary distribution account is divided into 2 sub-accounts – the generation and the allocation of primary incomes.

ii. The secondary distribution of income account

The secondary distribution of income account shows how the balance of primary incomes for an institutional unit or sector is transformed into its disposable income by the receipt and payment of current transfers (excluding social transfers in kind).

The 2 further sub-accounts (the use of disposable income and the use of adjusted disposable income) look at the use of income for either consumption or saving.

iii. The redistribution of income in kind

The redistribution of income in kind account shows how gross disposable income of households and non-profit institutions serving households and of government are transformed by the receipt and payment of transfers in kind. The balancing item for this account is adjusted gross disposable income (B.7g).

2. The accumulation accounts (Accounts III and IV)

The accumulation accounts cover all changes in assets, liabilities and net worth. The accounts are structured into 2 groups.

The first group of accounts (Account III) cover transactions which would correspond to all changes in assets or liabilities and net worth that result from transactions and are known as the capital account and the financial account. They are distinguished to show the balancing item net lending/borrowing.

The second group of accounts (Account IV) relate to all changes in assets, liabilities and net worth due to other factors, for example, the discovery or re-evaluation of mineral reserves, or the reclassification of a body from one sector to another.

a. Capital account (Account III.1)

The capital account concerns the acquisition of non-financial assets (income creating or wealth only) such as fixed assets or inventories, financed out of saving, and capital transfers involving the redistribution of wealth. Capital transfers include, for example, capital grants from private corporations to public corporations.

The account shows how savings finance investment in the economy. In addition to gross fixed capital formation and changes in inventories, it shows the redistribution of capital assets between sectors of the economy and the rest of the world. If the balance on the account is negative, it is described as net borrowing and measures the net amount a unit or sector is obliged to borrow from others. If positive, the balance is described as net lending and measures the amount the UK or a sector has available to lend to others. This balance is also referred to as the financial surplus or deficit and the net aggregate for the 5 sectors of the economy equals net lending/borrowing from the rest of the world.

b. Financial account (Account III.2)

The financial account shows how net lending and borrowing are achieved by transactions in financial instruments. The net acquisitions of financial assets are shown separately from the net incurrence of liabilities. The balancing item is net lending/borrowing. In principle, net lending or borrowing should be identical for both the capital account and the financial account. In practice, however, due to errors and omissions this identity is very difficult to achieve for the sectors and the economy as a whole. The difference is known as the statistical discrepancy.

c. The balance sheet (Account IV)

The second group of accumulation accounts complete the sequence of accounts. Included in these accounts are the balance sheets and a reconciliation of the changes that have brought about the change in net worth between the beginning and end of the accounting period. The opening and closing balance sheets show how total holdings of assets by the UK or its sectors match total liabilities and net worth (the balancing item). Net worth equals changes in assets less changes in liabilities.

Various types of assets and liabilities can be shown in detailed presentations of the balance sheets. Changes between the opening and closing balance sheets for each group of assets and liabilities result from transactions and other flows recorded in the accumulation accounts, or reclassifications and revaluations.

The rest of the world account (Account V)

The rest of the world account covers the transactions between resident and non-resident institutional units and the related stocks of assets and liabilities. Written from the point of view of the rest of the world, the account is similar in role to an institutional sector.

Codes used in tables

The codes used are consistent with the European System of Accounts, revised 2010 (ESA2010).

The ESA 2010 code for each series is shown in the tables, using the following prefixes

- S for the classification of institutional sectors,
- P for transactions in products,
- D for distributive transactions,
- F for transactions in financial assets and liabilities,
- K for other changes in assets,
- B for balancing items and net worth.

Within the financial balance sheets, the following prefixes are used

- AF for financial assets/liabilities

More information on ESA2010, along with a [downloadable manual](#), can be found on the [European Union's Eurostat page](#)

Financial intermediation service charge indirectly measured

Financial intermediation service charge indirectly measured (FISIM) is the process whereby a financial institution such as a bank accepts deposits from units (people and institutions) wishing to receive interest on funds, and lends them to units wishing to borrow.

The bank acting as an intermediary provides a mechanism to allow the first unit to lend to the second. The unit lending funds accepts a rate of interest lower than that paid by the borrower. A 'reference rate' of interest is the rate at which both lender and borrower would be happy to strike a deal. The difference between interest calculated at the reference rate and interest actually paid to depositors and charged to borrowers is a financial intermediation service charge indirectly measured. Total FISIM is the sum of the implicit fees paid by the borrower and the lender.

FISIM are produced by deposit-taking corporations except the central bank (S.122); and other financial intermediaries, except insurance corporations and pension funds (S.125).

Interbank FISIM are the FISIM produced between financial intermediaries (FIs). By convention, no interbank FISIM has to be calculated between resident FIs, nor between resident FIs and non-resident FIs. FISIM are calculated in respect of non-bank user institutional sectors only. FISIM are allocated into intermediate and final consumption.

There is a full description of the implementation of FISIM in the article, 'Improving the measurement of banking services in the UK National Accounts. Economic and Labour Market Review', ([Link: http://webarchive.nationalarchives.gov.uk/20160105160709/http://www.ons.gov.uk/ons/guide-method/method-quality/specific/economy/national-accounts/articles/2011-present/national-accounts-articles---changes-to-financial-intermediation-services-indirectly-measured.pdf](http://webarchive.nationalarchives.gov.uk/20160105160709/http://www.ons.gov.uk/ons/guide-method/method-quality/specific/economy/national-accounts/articles/2011-present/national-accounts-articles---changes-to-financial-intermediation-services-indirectly-measured.pdf))

Quality

Important quality issues

Common pitfalls in interpreting series are;

- expectations of accuracy and reliability in early estimates are often too high
- revisions are an inevitable consequence of the trade off between timeliness and accuracy
- early estimates are based on incomplete data

Very few statistical revisions arise as a result of ‘errors’ in the popular sense of the word. All estimates, by definition, are subject to statistical ‘error’, but in this context the word refers to the uncertainty inherent in any process or calculation that uses sampling, estimation or modelling. Most revisions reflect either the adoption of new statistical techniques, or the incorporation of new information which allows the statistical error of previous estimates to be reduced. Only rarely are there avoidable ‘errors’ such as human or system failures, and such mistakes are made clear when they do occur.

GDP quarterly alignment adjustments

To improve the coherence of the quarterly accounts, adjustments are made to quarterly estimates of both the expenditure and income analyses of GDP for 1983 onwards. These adjustments, which sum to zero across each complete year, are attributed to the change in inventories component of GDP analysed by expenditure and to gross operating surplus of companies component analysed by income. These adjustments may be considered as allowing for timing differences in the recording of transactions in different parts of the economy.

In addition, accurate quarterly measurement is more difficult for the changes in inventories component. These quarterly adjustments modify the aggregates derived from expenditure or income components to better reflect the quarter-to-quarter paths of the output measure of GDP.

Income, product and spending per head

The annual per head data in Table 1.1.5 is calculated using mid-year population estimates. The quarterly per head series will not sum to the annual total as the quarterly series use constructed population numbers estimated using successive annual mid-year population figures.

National Accounts methodology and articles

We regularly publish [methodological information and articles](#) to give users more detailed information on developments within the National Accounts. We also publish supplementary analyses of data to help users with the interpretation of statistics and guidance on the methodology used to produce the National Accounts.

National Accounts classification decisions

The UK National Accounts are produced under internationally agreed guidance and rules set out principally in the [European System of Accounts \(ESA 2010\)](#) and the accompanying ‘Manual on Government Deficit and Debt -Implementation of ESA 2010’. (*Link to Government Deficit manual: http://ec.europa.eu/eurostat/en/web/products-manuals-and-guidelines/product?p_auth=Khlyd5f4&p_p_id=estatsearchportlet_WAR_estatsearchportlet&p_p_life_cycle=1&p_p_state=maximized&p_p_mode=view&_estatsearchportlet_WAR_estatsearchportlet_action=search&text=Manual+on+Government+Deficit+and+Debt+-+Implementation+of+ESA10+-+2013+edition*)

In the UK, ONS is responsible for the application and interpretation of these rules. Therefore ONS makes [classification decisions](#) based upon the agreed guidance and rules, and these are published on our website.

Economic context

ONS publishes a monthly [Economic Review](#) discussing the economic background, giving economic commentary on the latest GDP estimate and our other economic releases.

Seasonal adjustment

Seasonal adjustment aims to identify, estimate and remove regular seasonal fluctuations and calendar effects from time series data (data that are collected at regular intervals form a time series). Regular seasonal fluctuations are those movements which, on the basis of the past movements of the time series, can generally be expected to reoccur in a similar way in the same period each year.

Calendar effects include impacts caused by the number of working days or calendar days in the month or the dates of particular occasions, such as Easter, within the year. The influence of such effects on a particular month can vary from year to year but they are able to be quantified and adjusted.

When to use seasonally adjusted data

Data that are collected at regular intervals form a time series. The ONS publishes quarterly and annual time series within the UKEA. Those analysing a time series will usually be looking to see what the short and long term movements in the series are and whether any unusual occurrences have had any major effect on the series. This type of analysis is not easy using raw time series data because there will normally be short-term effects associated with the time of year that will obscure other movements. For example, retail sales will go up in December due to the effect of Christmas.

The purpose of seasonal adjustment is to remove the variations associated with the time of the year. If you are interested in comparing consecutive months or quarters, the seasonally adjusted time series will provide a more reliable estimate of change.

Availability of seasonally and non-seasonally adjusted data

ONS publishes quarterly and annual non-seasonally adjusted (NSA) data for all series within the UKEA and where they exist, the corresponding quarterly seasonally adjusted (SA) series also (not all time series data have seasonal patterns and hence the SA series are the same as the NSA series). The annual time series data is not seasonally adjusted across calendar years and so, for calendar years, the annual NSA and NSA data values are the same.

For the sector and financial accounts, the financial accounts and balance sheet quarterly and annual time series data are all non-seasonally adjusted. The income and capital accounts contain both seasonally (where appropriate) and non-seasonally adjusted quarterly and annual time series.

UKEA long run time series data

The UKEA is published at the end of every quarter throughout the year and our [release calendar](#) sets out the forthcoming publication dates up to a year in advance. This provides users with a regular and consistently available set of comparable economic time series data.

All time series data published within the UKEA are available back to 1987 on a quarterly and annual basis with many of the time series having data as far back as 1948 annually and 1955 quarterly.

Users and uses of the UKEA

Data published in the United Kingdom Economic Accounts (UKEA) has a broad range of users. These include other government departments, the Bank of England (BoE), Office for Budget Responsibility (OBR), knowledge and research institutions, financial and non-financial corporations, journalists, the general public, and international institutions.

UKEA data are widely used by government departments to inform and monitor the effect of policy decisions. UKEA data also aid an assessment of the economy: informing the Bank of England's Monetary Policy Committee (MPC) discussions when setting monetary policy and the OBRs forecasts and evaluations of economic growth and public sector finances. The data is also used by knowledge and research institutions such as think-tanks, lobby groups and universities and by researchers, analysts, academics, students and trade organisations.

The UKEA also provides businesses with key statistics and often form the basis on which journalists publish reports and articles. Data series commonly of interest include real household disposable income, gross saving, the household saving ratio, financial wealth and balance of payments data. The UKEA also contain useful information on the holdings of debt for each sector of the economy.

Key users of the UKEA outside of the UK include international bodies such as Eurostat, the European Central Bank (ECB), the Organisation for Economic Cooperation and Development (OECD) and The World Bank. These organisations also use the UKEA to inform and monitor the effect of policy decisions at an international level and to create international comparisons of key economic measures such as Gross Domestic Product (GDP) and Gross National Income (GNI); GNI data provided to Eurostat is used in the calculation of a Member State's contribution to the European Union (EU) budget.

Confidentiality

We are committed to ensuring all information provided is kept strictly confidential and will only be used for statistical purposes. Further details regarding confidentiality can be found in the respondent charters for [businesses](#) and [households](#) on our website.

Notes

1. Most quarterly data are available seasonally adjusted: those not seasonally adjusted are indicated.
2. Rounding may lead to inconsistencies between the sum of constituent parts and the total in some tables.
3. 'Billion' denotes one thousand million.
4. Symbols used:
 - .. not available
 - nil or less than half the final digit shown

Periods covered

- 'Q1' or 'Quarter 1' refers to the first quarter of the calendar year, and includes the months January, February and March
- 'Q2' or 'Quarter 2' refers to the second quarter of the calendar year, and includes the months April, May and June
- 'Q3' or 'Quarter 3' refers to the third quarter of the calendar year, and includes the months July, August and September
- 'Q4' or 'Quarter 4' refers to the fourth quarter of the calendar year, and includes the months October, November and December

Background notes

Details of the policy governing the release of new data are available by visiting the [Statistics Authority code of practise webpage](#) or from the Media Relations Office email: media.relations@ons.gsi.gov.uk

These National Statistics are produced to high professional standards and released according to the arrangements approved by the UK Statistics Authority.

Special events

The ONS policy on special events can be found [here](#). Special events are events that are identifiable, do not occur on a regular cycle and have at least the potential to have an impact on statistics.

Notices for this publication

1. Changes to the treatment of non-market output and social transfers in kind

The article [Methodological improvements to National Accounts for Blue Book 2016: Market/non-market output \(P.131/P.132\) and social transfers in kind \(D.631/D.632\) for government](#) covers changes to the treatment of non-market output and social transfers in kind that have been introduced with publication of the UK National Accounts 2016. This is a significant change to National Accounts systems and processes in order to comply with the ESA 2010 requirement.

The impact for users is largely presentational with the key aggregates of GDP and GNI being unchanged.

Users of any of the aggregates described in the table below will need to be aware of these changes and may need to update any automated models that use existing national accounts identifiers (CDIDs).

For UKEA users, this change is limited to the transactions D.63 (Social Transfers in Kind), D.631 (Social transfers in kind - non-market production) and D.632 (Social transfers in kind - purchased market production). Details are listed in the table below.

2. Addition of insurance, pension and standardised guarantee schemes data

To ensure consistency with the United Kingdom National Accounts (Blue Book) 2016 publication, new series have been added to the UKEA covering insurance, pension and standardised guarantee schemes data. This affects financial account and financial balance sheet tables. Details are listed in the table below.

Transaction	Metadata	UKEA tables impacted	Table title/Sector	Seasonality	Price basis	CDID
F.66	Provisions for calls under standardised guarantees	4.1.8	Financial account: Financial corporations. ESA 2010 sector S.12	Not seasonally adjusted (NSA)	Current price (CP)	M9ZL
AF.66	Provisions for calls under standardised guarantees	4.1.9	Financial balance sheet: financial corporations. ESA 2010 sector S.12	NSA	CP	M9UK

3. Addition of insurance premiums data

To ensure consistency with the United Kingdom National Accounts (Blue Book) 2016 publication, new series have been added to the UKEA covering non-life insurance premiums and non-life insurance claims in the General Government and Central Government sectors. This affects the secondary distribution of income account in the income and capital account Details are listed in the table below.

Transaction	Metadata	UKEA tables impacted	Table title/Sector	Resource/ Use	Seasonality	Price basis	CDID
D.71	Net non-life insurance premiums	5.1.4	Income and Capital Account: General government ESA 2010 sector S.13	Resource	Not seasonally adjusted (NSA)	Current price (CP)	DNKQ
D.71	Net non-life insurance premiums	5.1.4	Income and Capital Account: General government ESA 2010 sector S.13	Resource	Seasonally adjusted (SA)	CP	DOYP

1 Estimates cannot be regarded as accurate to the last digit shown.

2 Components of output are valued at basic prices, which excludes taxes and subsidies on production.

3 Weights may not sum to the totals due to rounding.

1.1.6 Gross value added by category of output^{1,2}

1 Estimates cannot be regarded as accurate to the last digit shown.

2 Components of output are valued at basic prices, which excludes taxes and subsidies on production.

3 Weights may not sum to the totals due to rounding.

4 Comprising sections R, S and T of SIC(2007).

1 The residual error is, by convention, the amount by which the expenditure-based approach to measuring GDP exceeds the income-based estimate. It is also the sum of two components: the statistical discrepancy (expenditure) with sign reversed, and the statistical discrepancy (income) with natural sign.

2 Income data deflated by the implied GDP deflator, based on expenditure data.

1 Interest payments in the National Accounts are separated into two elements; the underlying interest charge and the financial service charge. Interest under D.41 in the allocation of primary income is measured separately to the service charge element of the transaction. Users of this table are advised to also use the individual sector tables which show the actual interest payments and receipts of each of the institutional sectors.

1 Interest payments in the National Accounts are separated into two elements; the underlying interest charge and the financial service charge. Interest under D.41 in the allocation of primary income is measured separately to the service charge element of the transaction. Users of this table are advised to also use the individual sector tables which show the actual interest payments and receipts of each of the institutional sectors.

1 Using series YBHA: GDP at current market prices

2 When downloading data from the UKEA dataset users should reverse the sign of series that have an identifier that is prefixed with a minus sign.

3 This series represents net errors and omissions in the balance of payments accounts. It is the converse of the not seasonally adjusted current and capital balances (HBOG and FKMJ) and net financial account transactions (HBNT) and is required to balance these three accounts.

1 Includes transactions with European Union institutions.

2 Transactions with non-EU countries continue to be shown in tables B6B and B6C.

3 EMU members : Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Irish Republic, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Portugal, Slovakia, Slovenia and Spain.

4 Lithuania became a member of the EMU on 1 January 2015. The table presents EMU19 figures for 2014Q1 to 2015Q1 and EMU18 figures for 1999Q1 to 2013Q4. ONS will publish EMU19 figures for the full time series within the 2015Q2 publication in September 2015.

1 Includes transactions with European Union institutions.

2 Transactions with non-EU countries continue to be shown in tables B6B and B6C.

3 EMU members : Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Irish Republic, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Portugal, Slovakia, Slovenia and Spain.

4 Lithuania became a member of the EMU on 1 January 2015. The table presents EMU19 figures for 2014Q1 to 2015Q1 and EMU18 figures for 1999Q1 to 2013Q4. ONS will publish EMU19 figures for the full time series within the 2015Q2 publication in September 2015.
