1 . Main points

- Real household disposable income per head decreased by 0.8% in Quarter 1 (Jan to Mar) 2026, following a rise of 1.2% in Quarter 4 (Oct to Dec) 2025.
- The household saving ratio decreased during Quarter 1 2026 by 0.7 percentage points to 8.9%; driven by a fall in the contribution of non-pension saving.
- The UK's borrowing position with the rest of the world, as a percentage of gross domestic product (GDP), is estimated to have decreased to 3.0% in the latest quarter, compared with 3.6% of GDP in the previous quarter.
- Non-financial corporations decreased their net borrowing to 0.1% of GDP in the latest quarter, from borrowing of 0.9% of GDP in the previous quarter; within non-financial corporations, private non-financial corporations decreased their net borrowing to £1.2 billion in the latest quarter from net borrowing of £8.0 billion in the previous quarter.
- Financial corporations net lending position was at 1.3% of GDP in the latest quarter, following borrowing of 0.1% of GDP in the previous quarter.
- General government net borrowing decreased from the previous quarter to 3.7% of GDP; within general government, central government decreased their net borrowing to £25.4 billion compared with £31.5 billion in the previous quarter.
- Households increased their net lending position to 2.3% of GDP in the latest quarter, from 2.2% of GDP in the previous quarter.

2 . Data on quarterly sector accounts

[Quarterly sector accounts](#)

Dataset | Released 30 June 2026

Quarterly aggregate economic indicators and summary estimates for the private non-financial corporations and households' sectors of the UK economy, and revisions.

[UK Economic Accounts](#)

Dataset | Released 30 June 2026

Quarterly national accounts aggregates, per capita data, including gross domestic product by income and expenditure, gross value added, gross fixed capital formation, change in inventories, gross operating surplus and revisions.

[UK Economic Accounts time series](#)

Dataset | Released 30 June 2026

Quarterly estimates of national product, income and expenditure, sector accounts revisions and balance of payments.

3 . Glossary

Interactive glossary

Gross disposable household income and real household disposable income

Gross disposable household income (GDHI) is the estimate of the total amount of income that households have available to either spend, save or invest. GDHI includes income received from wages (and the self-employed), social benefits, pensions and net property income (that is, earnings from interest on savings and dividends from shares), less taxes on income and wealth.

Adjusting GDHI to remove the effects of inflation gives real household disposable income (RHDI). RHDI is a measure of the real purchasing power of households' income, in terms of the physical quantity of goods and services they would be able to purchase, if prices remained constant over time. This is explained in detail in our [Understanding real household disposable income per head article](#).

Household saving ratio

The saving ratio estimates the amount of money households have available to save as a percentage of their gross disposable income, plus pension accumulations.

Net lending or borrowing

The net lending of a sector represents the surplus resources that a sector makes available to other sectors. Net borrowing represents their financing of a deficit from other sectors.

Net lending means a sector has money left over after its spending and investment in each period.

Net borrowing means it has spent and invested more than it received and has a need for financing, which may be covered by borrowing, issuing shares or bonds, or by drawing on reserves.

4 . Data sources and quality

Revisions within this release

This bulletin includes new data for the latest available quarter, Quarter 1 (January to March) 2026 with revisions from Quarter 1 (January to March) 2024. This bulletin follows the [National Accounts Revisions Policy](#).

Population figures for up to mid-2024 are based on mid-year UK population estimates published on 26 September 2025. Figures for Quarter 3 (July to Sept) 2024 up to Quarter 1 (Jan to Mar) 2025 are based on an interpolation between mid-year estimates and 2024-based national population projections using the principal variant published on 28 April 2026. Figures for Quarter 2 (Apr to June) 2025 onwards are based on the 2024-based national population projections.

Understanding the sector and financial accounts

This bulletin presents analysis on UK aggregate data for the main economic indicators and summary estimates from the institutional sectors of the UK economy presented in the UK Economic Accounts (UKEA) dataset. These institutional sectors include:

- public corporations
- private non-financial corporations
- financial corporations
- households
- non-profit institutions serving households (NPISH)
- central government
- local government
- rest of the world

This bulletin uses data from the UKEA to provide detailed estimates of:

- national product, income and expenditure
- UK sector non-financial and financial accounts
- UK balance of payments

These accounts are the underlying data that produce a single estimate of Gross Domestic Product (GDP) using income, production and expenditure data.

Quality and Methodology Information report

The [Quarterly sector accounts quality and methodology information \(QMI\) report](#) contains important information on:

- the strengths and limitations of the data, and how they compare with related data
- uses and users of the data
- how the output was created
- the quality of the output, including the accuracy of the data

Economic statistics governance after Brexit

New governance arrangements are being put in place following Brexit to support the adoption and implementation of high-quality standards for UK economic statistics. These governance arrangements will promote international comparability and add to the credibility and independence of the UK's statistical system.

At the centre of this new governance framework will be the new National Statistician's Committee for Advice on Standards for Economic Statistics (NSCASE). NSCASE will support the UK by ensuring that its processes for influencing and adopting international statistical standards are world leading. The advice NSCASE provides to the National Statistician will span the full range of domains in economic statistics, including the national accounts, fiscal statistics, prices, trade and the balance of payments, and labour market statistics.

1 This data uses the latest population estimates with the exception of the latest year where population projections are used. The quarterly data in this table does not sum to annuals

2 This data uses the UK resident population mid-year estimates published and the population projections available

3 The private non-financial corporations self-investment ratio is calculated by taking the sectors gross saving (RPKZ) and dividing it by their gross fixed capital formation (ROAW)

4 Quarterly Households debt to income ratio is calculated by taking the balance of Household debt (NIWK) and dividing it by the four quarter rolling sum of gross disposable income (HABN).

HH1 Households Sector (S.14) Allocation of Primary Income Account (II.1.2)
