## Notice

### 16 June 2020

The effect of the coronavirus (COVID-19) pandemic on our capacity means we have reviewed the existing labour market releases and will be suspending some publications.

This will protect the delivery and quality of our remaining labour market outputs as well as ensuring we can respond to new demands as a direct result of COVID-19. More details about the impact on labour market outputs can be found in our [statement](#).

## 2 . Main points for February to April 2020

- Employees' average pay growth slowed noticeably in April, and the three months February to April saw total pay fall in real terms for the first time since January 2018; pay declined in industries where [furloughing](#) was most prominent, many of these being the lowest-paying industries, in particular accommodation and food service activities.
- Estimated annual growth in average weekly earnings for employees in Great Britain in the three months to April 2020 was 1.0% for total pay (including bonuses) and 1.7% for regular pay (excluding bonuses).
- Annual growth has slowed sharply for both total and regular pay compared with the period prior to introduction of the coronavirus lockdown measures (December to February 2020), when it was 2.9%.
- The 1.0% growth in total pay in February to April 2020 translates to a fall of negative 0.4% in real terms (that is, total pay grew slower than inflation); in comparison, regular pay grew in real terms, by 0.4%, the difference being driven by subdued bonuses in recent months.
- Single month growth in average weekly earnings for April 2020 was negative 0.9% for total pay and 0% for regular pay.
- Pay estimates are based on all employees on company payrolls, including those who have been furloughed under the Coronavirus Job Retention Scheme (CJRS).

The estimates in this bulletin come from a survey of businesses. It is not possible to survey every business each month, so these statistics are estimates based on a sample, not precise figures.

### 3 . Analysis of average weekly earnings

**Figure 1: Pay growth for employees in total pay (including bonuses) is estimated to be 1.0%; this translates to a fall of 0.4% in real terms**

Great Britain average weekly earnings annual growth rates, seasonally adjusted, January to March 2001 to February to April 2020

Figure 1: Pay growth for employees in total pay (including bonuses) is estimated to be 1.0%; this translates to a fall of 0.4% in real terms

Great Britain average weekly earnings annual growth rates, seasonally adjusted, January to March 2001 to February to April 2020

Source: Office for National Statistics – Monthly Wages and Salaries Survey

Average weekly earnings estimates are based on the pay period including the last week of each month. For April 2020 this was after coronavirus (COVID-19) restrictions were introduced. For March 2020, only a low proportion of employees' pay is affected, as payrolls are often set by mid-month (before restrictions were introduced).

In February to April 2020, the rate of pay growth stood at 1.0% for total pay and 1.7% for regular pay.

The rate of growth has been slowing since April to June 2019, when it stood at 4.0% for total pay and 3.9% for regular pay, the highest nominal pay growth rates since 2008. It slowed to 2.9% in December to February 2020 immediately prior to the coronavirus (COVID-19) pandemic.

In real terms, annual pay growth had been positive between December to February 2018 and January to March 2020. This means that during that period, pay was growing faster than [inflation](#), with growth in real terms for both total pay and regular pay reaching a recent peak of 2.0% in the three months to June 2019. Total pay is now growing at a slower rate than inflation, at negative 0.4%, for the first time since November to January 2018. In comparison, regular pay growth in real terms is still positive, at 0.4%. The difference between the two measures is because of subdued bonuses, which fell by an average negative 6.8% (in nominal terms) in the three months February to April 2020.

The earnings estimates are not just a measure of pay rises as they also reflect changes in the number of paid hours worked and changes in the structure of the workforce, for example, more high-paid jobs would have an upward effect on earnings growth rates.

**Figure 2: The monthly falls in regular pay in both nominal and real terms are the largest since comparable records began in January 2000**

Great Britain average weekly earnings excluding bonuses, seasonally adjusted, January 2000 to April 2020

Figure 2: The monthly falls in regular pay in both nominal and real terms are the largest since comparable records began in January 2000

Great Britain average weekly earnings excluding bonuses, seasonally adjusted, January 2000 to April 2020

Source: Office for National Statistics – Monthly Wages and Salaries Survey

For April 2020, average regular pay, before tax and other deductions, for employees in Great Britain was estimated at £503 per week in nominal terms – a record fall of £7 on the previous month. The figure in real terms (constant 2015 prices) fell to £464 per week in April, after reaching £473 per week in December 2019, with pay in real terms now at the same level as it was in November 2018. The monthly fall in real terms in April 2020 of £6 is the largest since comparable records began in January 2000.

**Figure 3: Apart from the public sector and the finance and business sector, all sectors had negative annual regular pay growth in the single month of April 2020**

Annual growth in Great Britain nominal average weekly earnings excluding bonuses by sector, seasonally adjusted, between February to April 2019 and February to April 2020 compared with between April 2019 and April 2020

Figure 3: Apart from the public sector and the finance and business sector, all sectors had negative annual regular pay growth in the single month of April 2020

Annual growth in Great Britain nominal average weekly earnings excluding bonuses by sector, seasonally adjusted, between February to April 2019 and February to April 2020 compared with between April 2019 and April 2020

Source: Office for National Statistics – Monthly Wages and Salaries Survey

Between February to April 2019 and February to April 2020, average pay growth varied by industry sector (Figure 3). The public sector saw the highest estimated growth, at 3.2% for regular pay, while negative growth was seen in the construction sector, estimated at negative 1.8%. Both the wholesaling, retailing, hotels and restaurants sector and the manufacturing sector saw very weak growth at 0.1% for regular pay.

In addition, Figure 3 includes estimates of annual growth in regular pay for the single month of April 2020, with each sector showing a weakening pattern of growth when compared with the three months to April 2020. These April estimates are of interest because they relate to the pay period after the announcement of both the government lockdown measures and the Coronavirus Job Retention Scheme (CJRS), on 23 and 20 March 2020 respectively.

Note that single-month estimates are subject to sampling variability, which in the case of the whole economy is approximately 0.5% (Table 1). However, Figure 3 clearly indicates that for April the lockdown measures impacted sectors differently, with negative pay growth in construction, wholesaling, retailing, hotels and restaurants, and manufacturing.

## Figure 4: The lowest paying industries of accommodation and food service activities, retail trade and repairs, and arts, entertainment and recreation have all experienced negative pay growth in April 2020

Average weekly earnings excluding bonuses and annual percentage pay growth in Great Britain by industry, not seasonally adjusted, April 2020

[Download the data](#)

While Figure 3 presented figures at sector level, Figure 4 shows, by lower-level industry, average weekly employee pay in April and the percentage change in pay compared with April 2019. Figure 4 indicates that the three lowest paid industries, of accommodation and food service activities, the retail trade and repairs industry and the arts, entertainment and recreation industry all saw falls in pay compared with April 2019.

This is likely due to differing numbers of employees being furloughed across industries (as indicated by [HMRC data published on 11 June](#)), affecting the numbers of hours worked (as shown by [Labour Force Survey estimates](#)). The decline in pay received by employees, especially those in lower paid jobs, may contribute to increases in [benefits claims](#) due to decreased household income.

Further detail about changes in pay in April among higher and lower-paid employees is provided by HMRC in its [Earnings and Employment from Paye As You Earn Real Time Information](#) publication.

## 4 . Average weekly earnings data

### [Average weekly earnings](#)

#### Notes

1. These sampling variability estimates are for 95% confidence intervals and are calculated on data for the 12 months from January to December 2014 that are not seasonally adjusted. [Back to table](#)
2. Separate estimates of sampling variability are given for the including bonuses estimates from January to April when most bonus payments are made. [Back to table](#)

## 5 . Glossary

### Average Weekly Earnings

[Average Weekly Earnings \(AWE\)](#) is the lead monthly measure of average weekly earnings per employee. It is calculated using information based on the Monthly Wages and Salaries Survey (MWSS), which samples around 9,000 employers in Great Britain.

The estimates are not just a measure of pay rises as they do not, for example, adjust for changes in the proportion of the workforce who work full-time or part-time or other compositional changes within the workforce. The estimates do not include earnings of self-employed people.

Estimates are available for both total pay (which includes bonus payments) and regular pay (which excludes bonuses). Estimates are available in both nominal terms (not adjusted for inflation) and real terms (adjusted for inflation).

## Bonus

A bonus is a form of reward or recognition granted by an employer. When an employee receives a bonus payment, there is no expectation or assumption that the bonus will be used to cover any specific expense. The value and timing of a bonus payment can be at the discretion of the employer or stipulated in workplace agreements.

## Consumer Prices Index including owner occupiers' housing costs

As of 21 March 2017, the [Consumer Prices Index including owner occupiers' housing costs \(CPIH\)](#) became our lead measure of inflation. It is our most comprehensive measure of UK consumer price inflation.

## Monthly Wages and Salaries Survey

The Monthly Wages and Salaries Survey (MWSS) is a survey through which we collect information on wages and salaries. It is distributed monthly to around 9,000 employers covering around 12.8 million employees.

A [more detailed glossary](#) is available.

## 6 . Measuring the data

### Coronavirus (COVID-19)

In response to the developing coronavirus (COVID-19) pandemic, we are working to ensure that we continue to publish economic statistics. For more information, please see [COVID-19 and the production of statistics](#).

We have reviewed all publications and data published as part of the labour market release in response to the coronavirus pandemic. This has led to the [postponement of some publications and datasets](#) to ensure that we can continue to publish our main labour market data. This will protect the delivery and quality of our remaining outputs as well as ensuring we can respond to new demands as a direct result of the coronavirus.

For more information on how labour market data sources, among others, will be affected by the coronavirus pandemic, see the [statement](#) published on 27 March 2020. A further [article](#) published on 6 May 2020, detailed some of the challenges that we have faced in producing estimates at this time.

Our latest data and analysis on the impact of the coronavirus on the UK economy and population is now available on our dedicated [COVID-19 webpage](#).

In April, potentially significant changes in employee pay, associated with social distancing measures, made it necessary to change some aspects of the processing of Average Weekly Earnings (AWE) data. The normal approach to processing both non-responding companies and those whose pay shows sharp unconfirmed changes from historical returns, is to roll forward (impute) employee and pay details from the most recent responding month. In April additional data validation was conducted, and information gathered from responding companies was used in the imputation of non-responding companies.

The survey response rate was 78%, only slightly lower than the 83% target in more typical months.

In line with international guidance, the seasonal adjustment process has been reviewed and revised this month, with all periods in the AWE series open to revision.

## After EU withdrawal

As the UK leaves the EU, it is important that our statistics continue to be of high quality and are internationally comparable. During the transition period, those UK statistics that align with EU practice and rules will continue to do so in the same way as before 31 January 2020.

After the transition period, we will continue to produce our labour market statistics in line with the UK Statistics Authority's [Code of Practice for Statistics](#) and in accordance with International Labour Organization (ILO) definitions and agreed international statistical guidance.

This bulletin relies on data collected from the Monthly Wages and Salaries Survey (MWSS), a survey of employers in Great Britain, excluding small businesses employing fewer than 20 people.

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in the [Average weekly earnings QMI](#).

## 7 . Strengths and limitations

The figures in this bulletin come from a survey of businesses that gathers information from a sample rather than from the whole population. The sample is designed to be as accurate as possible given practical limitations such as time and cost constraints. Results from sample surveys are always estimates, not precise figures. This can have an impact on how changes in the estimates should be interpreted, especially for short-term comparisons.

As the number of people available in the sample gets smaller, the variability of the estimates that we can make from that sample size gets larger. Estimates for small groups (for example, earnings for the construction sector), which are based on small subsets of the Monthly Wages and Salaries Survey (MWSS) sample, are less reliable and tend to be more volatile than for larger aggregated groups (for example, earnings for the private sector).

In general, short-term changes in the growth rates reported in this bulletin are not usually greater than the level that can be explained by sampling variability. Short-term movements in reported rates should be considered alongside longer-term patterns in the series and corresponding movements in other sources to give a fuller picture.

Further information is available in [A guide to labour market statistics](#) and [A guide to sources of data on earnings and income](#).

1. Estimates of total pay include bonuses but exclude arrears of pay.

2. The three month average figures are the changes in the average seasonally adjusted values for the three months ending with the relevant month compared with the same period a year earlier.

3. Estimates of real earnings are calculated by deflating the nominal earnings estimates by the Consumer Prices Index including owner occupiers' housing costs (CPIH), our preferred measure of consumer price inflation.
