2 . Main points for September to November 2019

- The UK employment rate was estimated at a record high of 76.3%, 0.6 percentage points higher than a year earlier and 0.5 percentage points up on the previous quarter.
- The UK unemployment rate was estimated at 3.8%, 0.2 percentage points lower than a year earlier but largely unchanged on the previous quarter.
- The UK economic inactivity rate was estimated at a record low of 20.6%, 0.4 percentage points lower than the previous year and the previous quarter.

The data in this bulletin come from the Labour Force Survey, a survey of households. It is not practical to survey every household each quarter, so these statistics are estimates based on a large sample.

3 . Employment

Figure 1: The employment rate for all people increased 0.6 percentage points on the year to a record high of 76.3%

UK employment rates (aged 16 to 64 years), seasonally adjusted, January to March 1971 to September to November 2019

Figure 1: The employment rate for all people increased 0.6 percentage points on the year to a record high of 76.3%

UK employment rates (aged 16 to 64 years), seasonally adjusted, January to March 1971 to September to November 2019

Source: Office for National Statistics – Labour Force Survey

[Employment](#) measures the number of people aged 16 years and over in paid work. The employment rate is the proportion of people aged between 16 and 64 years who are in paid work.

Estimated employment rates for people aged between 16 and 64 years have generally been increasing since early 2012 but this increase has slowed in recent periods (as seen in Figure 1). While the employment rate estimates for men have levelled off, the estimates for the women's employment rate have continued to rise. For September to November 2019:

- the estimated employment rate for all people was a record high of 76.3%; this is 0.6 percentage points up on the year and 0.5 percentage points up on the quarter
- the estimated employment rate for men was 80.4%; this is 0.1 percentage points up on the year and 0.2 percentage points up on the quarter
- the estimated employment rate for women was a record high of 72.3%; this is 1.1 percentage points up on the year and a joint record high of 0.7 percentage points up on the quarter

The increase in the employment rate for women in recent years is partly a result of changes to the State Pension age for women, resulting in fewer women retiring between the ages of 60 and 65 years.

Estimates for September to November 2019 show a record 32.90 million people aged 16 years and over in employment, 359,000 more than a year earlier. This annual increase was mainly driven by full-time workers (up 349,000 on the year to a record high of 24.36 million) and women (up 317,000 on the year to a record high of 15.58 million). The annual increase in women working full-time (up 245,000 to a record high of 9.26 million) was the largest since February to April 2017.

There was a 208,000 increase in employment on the quarter. This was, again, mainly driven by quarterly increases for full-time workers (up 197,000; the largest increase since September to November 2015) and for women (up 148,000; the largest increase since February to April 2014). The quarterly increase in women working full-time (up 126,000) was the largest since November 2012 to January 2013.

Figure 2: The number of women working full-time has increased by 9.1% since September to November 2015; more than double the percentage increase for men

UK employment percentage growth for full-time and part-time men and women (aged 16 years and over), seasonally adjusted, September to November 2015 to September to November 2019

Figure 2: The number of women working full-time has increased by 9.1% since September to November 2015; more than double the percentage increase for men

UK employment percentage growth for full-time and part-time men and women (aged 16 years and over), seasonally adjusted, September to November 2015 to September to November 2019

Source: Office for National Statistics – Labour Force Survey

Increases in the number of full-time workers have been the main driver of increases in employment in recent years, while the number of part-time workers has been relatively flat in comparison (as seen in Figure 2).

The rate of growth for women working full-time has been consistently higher than for men over the last few years, with women being the main drivers of the strong increase in full-time employment. For September to November 2019, the number of women working full-time increased by 9.1% compared with the same three months in 2015, while the number of men increased by 3.7% over the same period. In comparison, the number of women working part-time increased by 1.7% and the number of men working part-time decreased by 0.8%.

Figure 3: Over the last year the number of employees increased by 179,000 and the number of self-employed people increased by 145,000

UK employees and self-employed people annual changes (aged 16 years and over), seasonally adjusted, September to November 2009 to September to November 2019

Figure 3: Over the last year the number of employees increased by 179,000 and the number of self-employed people increased by 145,000

UK employees and self-employed people annual changes (aged 16 years and over), seasonally adjusted, September to November 2009 to September to November 2019

Source: Office for National Statistics – Labour Force Survey

Looking at the estimates for September to November 2019 by type of employment:

- there were a joint record 27.71 million paid employees (84.2% of all people in employment), 179,000 more than a year earlier
- there were a record 5.00 million self-employed people (15.2% of all people in employment), 145,000 more than a year earlier

Since the latter half of 2012, the annual increases for employees have generally been greater than for the self-employed (Figure 3). In recent periods this had reversed, but in September to November 2019 the increase for employees went back to being greater than the increase for the self-employed.

These estimates for paid employees and self-employed people make up over 99% of all people in employment in the UK. The total employment figure also includes two other minor categories as explained in the [Guide to labour market statistics](#).

Figure 4: Women aged 25 to 64 years have been the main drivers of the increase in the employment rate over the last five years

UK employment rates change by age and sex, seasonally adjusted, September to November 2014 to September to November 2019

Figure 4: Women aged 25 to 64 years have been the main drivers of the increase in the employment rate over the last five years

UK employment rates change by age and sex, seasonally adjusted, September to November 2014 to September to November 2019

Source: Office for National Statistics – Labour Force Survey

Figure 4 shows employment rate changes between September to November 2014 and September to November 2019 for younger and older people combined (those aged 16 to 24 years and those aged 65 years and over) compared with those aged 25 to 64 years, broken down by sex. It can be seen that those aged 25 to 64 years have been driving increases in employment rates in recent years, with the largest increase seen for women. In comparison, employment rates have been relatively flat for younger and older people over the last five years. This is partly because of the different way in which full-time students interact with the labour market.

Hours worked

Since estimates began in 1971, [total hours worked](#) by women have generally increased, reflecting increases in both the employment rate for women and the UK population. In contrast, total hours worked by men have been relatively stable, with the level in September to November 2019 being close to the level in January to March 1971 (626 and 628 million hours, respectively). This is because falls in the employment rate for men, and increases in the share of part-time working, have been roughly offset by population increases.

Between September to November 2018 and September to November 2019, total actual weekly hours worked in the UK increased by 1.4% (to 1.05 billion hours), while average actual weekly hours increased by 0.2% (to 32.0 hours). Therefore, the annual increase in total hours was mainly driven by the 1.1% increase in employment over the last year.

In September to November 2019, men worked an average of 36.2 hours per week, a decrease of 0.1 hours compared with a year earlier. In contrast, the average actual weekly hours for women increased by 0.4 hours over the year, to 27.4 hours. This increase in average hours for women, combined with the increase in employment, has resulted in the largest annual increase in total actual weekly hours worked by women since April to June 2014, to reach a record high of 427.69 million hours.

4 . Unemployment

Figure 5: Unemployment rates have generally been falling for the last six years

UK unemployment rates (aged 16 years and over), seasonally adjusted, January to March 1971 to September to November 2019

Figure 5: Unemployment rates have generally been falling for the last six years

UK unemployment rates (aged 16 years and over), seasonally adjusted, January to March 1971 to September to November 2019

Source: Office for National Statistics – Labour Force Survey

[Unemployment](#) measures people without a job who have been actively seeking work within the last four weeks and are available to start work within the next two weeks. The unemployment rate is not the proportion of the total population who are unemployed. It is the proportion of the economically active population (those in work plus those seeking and available to work) who are unemployed.

Estimated unemployment rates for both men and women aged 16 years and over have generally been falling since late 2013 but have levelled off in recent periods (as seen in Figure 5).

For September to November 2019:

- the estimated UK unemployment rate for all people was 3.8%, 0.2 percentage points lower than a year earlier but largely unchanged on the previous quarter
- the estimated UK unemployment rate for men was 4.0%, 0.1 percentage points lower than a year earlier but largely unchanged on the previous quarter
- the estimated UK unemployment rate for women was 3.6%, down 0.4 percentage points on the year and down 0.1 percentage points on the quarter

Figure 6: The steady fall in unemployment rates for men and women over the last few years has slowed in recent periods

UK unemployment rates (aged 16 years and over), seasonally adjusted, September to November 2014 to September to November 2019

Figure 6: The steady fall in unemployment rates for men and women over the last few years has slowed in recent periods

UK unemployment rates (aged 16 years and over), seasonally adjusted, September to November 2014 to September to November 2019

Source: Office for National Statistics – Labour Force Survey

Between September to November 2014 and September to November 2019 (Figure 6):

- the estimated unemployment rate for all people fell from 5.9% to 3.8%
- the estimated unemployment rate for men fell from 6.1% to 4.0%
- the estimated unemployment rate for women fell from 5.6% to 3.6%

For September to November 2019, an estimated 1.31 million people were unemployed. This is 64,000 fewer than a year earlier and 618,000 fewer than five years earlier.

Figure 7: Long-term unemployment continues to fall

Unemployment in the UK by duration (aged 16 years and over), seasonally adjusted, September to November 2014 to September to November 2019

Figure 7: Long-term unemployment continues to fall

Unemployment in the UK by duration (aged 16 years and over), seasonally adjusted, September to November 2014 to September to November 2019

Source: Office for National Statistics – Labour Force Survey

Looking in more detail at this fall of 618,000 over the last five years (Figure 7):

- the estimated number of people unemployed for up to six months fell by 146,000 to 804,000, but has been relatively stable for the last two years
- for those unemployed for over six and up to 12 months, the number fell by 108,000 to 209,000, but has been broadly flat for the last three years
- the largest fall was for long-term unemployment (those unemployed for over one year), which was down 364,000 to 293,000, with the level for men reaching a record low of 177,000

5 . Economic inactivity

[Economic inactivity](#) measures people without a job but who are not classed as unemployed because they have not been actively seeking work within the last four weeks and/or they are unable to start work within the next two weeks. Our headline measure of economic inactivity is for those aged between 16 and 64 years.

Since comparable records began in 1971, the economic inactivity rate for all people aged between 16 and 64 years has been generally falling (although it increased during recessions). This is because of a gradual fall in the economic inactivity rate for women (as seen in Figure 8).

Figure 8: Overall inactivity rate for people aged between 16 and 64 years was a record low of 20.6%, down 0.4 percentage points on the year

UK economic inactivity rate (all people aged 16 to 64 years), seasonally adjusted, January to March 1971 to September to November 2019

Figure 8: Overall inactivity rate for people aged between 16 and 64 years was a record low of 20.6%, down 0.4 percentage points on the year

UK economic inactivity rate (all people aged 16 to 64 years), seasonally adjusted, January to March 1971 to September to November 2019

Source: Office for National Statistics – Labour Force Survey

For people aged between 16 and 64 years, for September to November 2019:

- the estimated economic inactivity rate for all people was a record low of 20.6%, down 0.4 percentage points both on the year and on the quarter
- the estimated economic inactivity rate for men was 16.2%, largely unchanged on the year but down 0.2 percentage points on the quarter
- the estimated economic inactivity rate for women was a record low of 24.9%, down 0.8 percentage points on the year and down 0.6 percentage points on the quarter

Estimates for September to November 2019 show 8.51 million people aged between 16 and 64 years not in the labour force (economically inactive). This was 145,000 fewer than a year earlier and 587,000 fewer than five years earlier. The annual decrease was driven by women, with the level down 157,000 to reach a record low of 5.18 million.

Figure 9: The number of people who are inactive because they are looking after family or home is at a record low

Inactive people (aged 16 to 64 years) by reason in the UK, seasonally adjusted, March to May 1993 to September to November 2019

Figure 9: The number of people who are inactive because they are looking after family or home is at a record low

Inactive people (aged 16 to 64 years) by reason in the UK, seasonally adjusted, March to May 1993 to September to November 2019

Source: Office for National Statistics – Labour Force Survey

Looking in more detail at the estimated fall of 587,000 in economic inactivity over the last five years, the categories showing the largest decreases were people looking after the family or home (down 387,000 to a record low of 1.93 million) and those (under 65 years) retiring from the labour force (down 173,000).

The fall was almost entirely driven by women, with a decrease of 490,000. This reflects changes to the State Pension age, resulting in fewer women retiring between the ages of 60 and 65 years, as well as more women in younger age groups participating in the labour market.

When the series began in March to May 1993, looking after family and home was the most common reason for inactivity, comprising 35.3% of the total number of economically inactive people. By September to November 2019, the share had decreased to 22.7% and it was now the third most common reason, behind students (26.6%) and the long-term sick (24.3%).

6 . Employment data

Labour Force Survey sampling variability (95% confidence intervals).

7 . Glossary

Actual and usual hours worked

Statistics for [usual hours worked](#) measure how many hours people usually work per week. Compared with [actual hours worked](#) they are not affected by absences and so can provide a better measure of normal working patterns. For example, a person who usually works 37 hours a week but who was on holiday for a week would be recorded as working zero actual hours for that week, while usual hours would be recorded as 37 hours.

Economic inactivity

People not in the labour force (also known as [economically inactive](#)) are not in employment but do not meet the internationally accepted definition of unemployment because they have not been seeking work within the last four weeks and/or they are unable to start work in the next two weeks. The economic inactivity rate is the proportion of people aged between 16 and 64 years who are not in the labour force.

Employment

[Employment](#) measures the number of people in paid work, or who had a job that they were temporarily away from (for example, because they were on holiday or off sick). This differs from the number of jobs because some people have more than one job. The employment rate is the proportion of people aged between 16 and 64 years who are in employment. A more detailed explanation is available in our [Guide to labour market statistics](#).

Unemployment

[Unemployment](#) measures people without a job who have been actively seeking work within the last four weeks and are available to start work within the next two weeks. The unemployment rate is not the proportion of the total population who are unemployed. It is the proportion of the economically active population (those in work plus those seeking and available to work) who are unemployed.

A [more detailed glossary](#) is available.

8 . Measuring the data

This bulletin relies on data collected from the [Labour Force Survey \(LFS\)](#), the largest household survey in the UK.

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in the [Labour Force Survey \(LFS\) QMI](#).

The [LFS performance and quality monitoring reports](#) provide data on response rates and other quality-related issues for the LFS.

9 . Strengths and limitations

The figures in this bulletin come from the Labour Force Survey (LFS), which gathers information from a sample of households across the UK rather than from the whole population. The sample is designed to be as accurate as possible given practical limitations such as time and cost constraints. Results from sample surveys are always estimates, not precise figures. This can have an impact on how changes in the estimates should be interpreted, especially for short-term comparisons.

As the number of people available in the sample gets smaller, the variability of the estimates that we can make from that sample size gets larger. Estimates for small groups (for example, unemployed people aged between 16 and 17 years), which are based on small subsets of the LFS sample, are less reliable and tend to be more volatile than for larger aggregated groups (for example, the total number of unemployed people).

In general, changes in the numbers (and especially the rates) reported in this bulletin between three-month periods are small and are not usually greater than the level that can be explained by sampling variability. Short-term movements in reported rates should be considered alongside longer-term patterns in the series and corresponding movements in other sources to give a fuller picture.

Comparability

The data in this bulletin follow internationally accepted definitions specified by the [International Labour Organization](#). This ensures that the estimates for the UK are comparable with those for other countries.

Further information is available in [A guide to labour market statistics](#).

Table 1: Labour Force Survey Sampling Variability (95% Confidence Intervals)
Sampling variability (95% Confidence Intervals) of UK Labour Force Survey estimates: September to November 2019

	Level	Sampling variability of level (*)	Change on quarter	Sampling variability of change on quarter (*)	Change on year	Sampling variability of change on year (*)
Employment (000s, aged 16 and over)	32,901	± 176	208	± 151	359	± 237

Source: Labour Force Survey

Labour market statistics enquiries: labour.market@ons.gov.uk

1. The Labour Force Survey (LFS) is a survey of households in the UK.

2. The headline employment rate is the number of people aged 16 to 64 in employment divided by the population aged 16 to 64.

3. The headline unemployment rate is the number of unemployed people (aged 16+) divided by the economically active population (aged 16+). The economically active population is defined as those in employment plus those who are unemployed.

4. The headline inactivity rate is the number of people aged 16 to 64 divided by the population aged 16-64.

Note on headline employment, unemployment and inactivity rates

The headline employment and inactivity rates are based on the population aged 16 to 64 but the headline unemployment rate is based on the economically active population aged 16 and over. The employment and inactivity rates for those aged 16 and over are affected by the inclusion of the retired population in the denominators and are therefore less meaningful than the rates for those aged from 16 to 64. However, for the unemployment rate for those aged 16 and over, no such effect occurs as the denominator for the unemployment rate is the economically active population which only includes people in work or actively seeking and able to work.

Note on headline employment, unemployment and inactivity levels

The headline employment and unemployment levels are for those aged 16 and over; they measure all people in work or actively seeking and able to work. However, the headline inactivity level is for those aged 16 to 64. The inactivity rate for those aged 16 and over is less meaningful as it includes elderly people who have retired from the labour force.

Source: Labour Force Survey

1. The split between full-time and part-time employment is based on respondents' self-classification.

Labour market statistics enquiries: labour.market@ons.gov.uk

2. This series does not include all people on these programmes; it only includes those engaging in any form of work, work experience or work-related training.

3. These series cover Employees and Self-employed only. These series include some temporary employees recorded in columns 13 to 19.

4. The total includes those who did not give a reason for working part-time and it therefore does not equal the sum of columns 21, 23, 24 and 25.

Labour market statistics enquiries: labour.market@ons.gov.uk

1. The total series includes people who do not state their country of birth or nationality. The total levels series MGTM does not therefore equal the sum of the "UK" and "Non-UK" series.

2. This series consists of all 27 EU member states excluding the UK. This series equals the sum of EU14, EU8, EU2 and Other EU.

3. Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain and Sweden.

4. Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Slovak Republic and Slovenia.

5. Romania and Bulgaria.

6. Cyprus, Malta and Croatia

7. Total Non-EU equals the sum of Other Europe, Total Africa, Total Asia and Total America and Oceania

The estimates shown in this table relate to the number of people in employment and should not be used as a proxy for flows of foreign migrants into the UK.

1. The total series includes people who do not state their country of birth or nationality. The total levels series therefore do not equal the sum of the "UK" and "Non-UK" series.
2. This series consists of all 27 EU member states excluding the UK.
3. This series consists of those people whose main reason for being economically inactive was because they were students. It does not include all students as some students will be included in the employment and unemployment estimates.

Labour market statistics enquiries: labour.market@ons.gov.uk

1. Not in full-time education includes people in part-time education and/or some form of training. Estimates of the number of young people who were not in employment, education or training ("NEET") cannot therefore be derived from this table. Estimates of young people who were NEET are published separately at:

<https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/unemployment/bulletins/youngpeoplenotineducationemploymentortrainingneet/latest>

2. People in full-time education are employed if they have a part-time job or unemployed if they are looking for part-time employment.

3. Denominator = all persons in the relevant age group for economically active, total in employment and economically inactive; economically active for unemployment.

Sources: EUROSTAT, OECD, national statistical offices.
Labour market statistics enquiries: labour.market@ons.gov.uk

(*) Note: The UK rates shown in this table are as published by EUROSTAT (the EUs statistical office). See Table 1 for the latest rates for the UK as published by ONS.

- All employment rates shown in this table are for those aged from 15 to 64 except for the rate for the United States published by OECD which are for those aged from 16 to 64.
- The employment rates for the EU are published by EUROSTAT and are not seasonally adjusted. EUROSTAT do not publish seasonally adjusted (SA) employment rates but SA rates for some EU countries are published by OECD. These OECD employment rates are available on our website at [dataset A10](#).
- Unemployment rates published by EUROSTAT for most EU countries (but not for the UK), are calculated by extrapolating from the most recent LFS data using monthly registered unemployment data. A standard population basis (15-74) is used by EUROSTAT except for Spain, Italy and the UK (16-74). The unemployment rate for the US is based on those aged 16 and over, but the rates for Canada and Japan are for those aged 15 and over. All unemployment rates shown in this table are seasonally adjusted.
- The "Total EU" series consist of all 28 EU countries. The Eurozone figures consist of the following EU countries: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Portugal, Slovak Republic, Slovenia and Spain.
- The EU unemployment rates are as published on the EUROSTAT database. For Sweden the rates on the database differ from those shown in the EUROSTAT News Release published on 29 November 2019. This is because the figures for Sweden on the database are seasonally adjusted estimates but the figures for Sweden shown in the News Release are the trend component.

Nov 18	277	30	248	85	26	59	42
Nov 19 (p)	175	27	147	98	28	70	40

Relationship between columns 1=2+3; 4=5+6

Data source: ONS Labour Disputes Survey
Labour disputes enquiries 01633 455400

- Estimates of working days lost and workers involved are shown to the nearest thousand. Unrounded estimates of less than 500 therefore round to zero.
- Due to rounding the working days lost for the public and private sectors may not add up to the total working days lost.
- The latest 12 month cumulative totals for the figures in these columns will not necessarily equal the sum of the 12 months as some disputes continue for over one month. These disputes appear in each month's data, but only once in the total.

REDUNDANCIES

22 Redundancies: level and rates ¹

United Kingdom (seasonally adjusted)

	People (aged 16 and over)		Men (aged 16 and over)		Women (aged 16 and over)
