- [Average weekly earnings in Great Britain](#)

2 . Main points

- The number of vacancies in November 2022 to January 2023 was 1,134,000, which is a decrease of 76,000 from August to October 2022.
- Quarterly growth fell for the seventh consecutive period to negative 6.3% in November 2022 to January 2023, with vacancies falling in 16 out of 18 industry sectors.
- In November 2022 to January 2023, total vacancies were down by 135,000 from the level of a year ago, although they remained 338,000 above their pre-coronavirus (COVID-19) January to March 2020 levels.
- In October to December 2022, the number of unemployed people per vacancy was at 1.1, which is up from the previous quarter (July to September 2022) because of significant falls in the number of vacancies in recent periods.

3 . Vacancies for November 2022 to January 2023

Figure 1: The estimated number of vacancies fell on the quarter, to 1,134,000

Number of vacancies in the UK, seasonally adjusted, November 2003 to January 2004 to November 2022 to January 2023

Figure 1: The estimated number of vacancies fell on the quarter, to 1,134,000

Number of vacancies in the UK, seasonally adjusted, November 2003 to January 2004 to November 2022 to January 2023

Source: Office for National Statistics – Vacancy Survey

In November 2022 to January 2023 the estimated number of vacancies fell by 76,000 on the quarter to 1,134,000, which is the seventh consecutive quarterly fall since May to July 2022.

The headline vacancy estimates are based on three-month averages which naturally involve some time lag. Insights into trends in January 2023 are provided by two experimental sources, single-month vacancy estimates (see [Strengths and limitations](#)), in [Dataset X06](#), and [Adzuna Online job advert estimates](#). Although vacancy numbers increased in dataset X06 for January 2023, these figures are not seasonally adjusted and should be used with caution when compared with the seasonally adjusted three-month estimates.

Figure 2: In November 2022 to January 2023, the rate of quarterly growth fell in the majority of industry sectors

November 2022 to January 2023 three-month average vacancies in the UK, quarterly percentage growth from August to October 2022 and percentage growth from pre-coronavirus (COVID-19) pandemic January to March 2020

Figure 2: In November 2022 to January 2023, the rate of quarterly growth fell in the majority of industry sectors

November 2022 to January 2023 three-month average vacancies in the UK, quarterly percentage growth from August to October 2022 and percentage growth from pre-coronavirus (COVID-19) pandemic January to March 2020

Source: Office for National Statistics – Vacancy Survey

The overall quarterly growth rate fell to negative 6.3% in November 2022 to January 2023, with the rate of growth falling in 16 of the 18 industry sectors. The industries showing the largest falls were construction, and real estate activities, at negative 14.2% and negative 13.9% respectively.

November 2022 to January 2023 saw the number of vacancies fall on the quarter for the seventh consecutive period, decreasing by 76,000. The industry sectors displaying the largest falls in vacancy numbers were administration and support service activities, down by 9,000; manufacturing, and education, both down by 8,000 on the quarter. The two industries to show growth on the quarter were mining and quarrying, and financial and insurance activities, but their combined growth only provided 1,000 more vacancies.

The fall in the number of vacancies reflects uncertainty across industries, as survey respondents continue to cite economic pressures as a factor in holding back on recruitment.

When comparing November 2022 to January 2023 with the same time last year, total vacancies decreased by 135,000 (10.6%), with the largest fall in accommodation and food service activities, which was down by 26,000. However, the total number of vacancies remains 338,000 above January to March 2020 pre-coronavirus (COVID-19) levels, with human health and social work activities showing the largest increase, at 70,000.

In October to December 2022, the number of unemployed people per vacancy was at 1.1, up slightly from 1.0 in the previous quarter. While this ratio remains very low by historical standards, this quarterly increase suggests a slight easing of recent tightness in the labour market, following consecutive falls in vacancy numbers.

Figure 3: Quarterly growth fell across all industry size bands in November 2022 to January 2023

November 2022 to January 2023 three-month average vacancies in the UK, quarterly growth from August to October 2022, and growth from a pre-coronavirus (COVID-19) pandemic January to March 2020

Figure 3: Quarterly growth fell across all industry size bands in November 2022 to January 2023

November 2022 to January 2023 three-month average vacancies in the UK, quarterly growth from August to October 2022, and growth from a pre-coronavirus (COVID-19) pandemic January to March 2020

Source: Office for National Statistics – Vacancy Survey

For the sixth consecutive period there was no quarterly growth in the number of vacancies in any business size band.

4 . Jobs, vacancies and wider labour market measures

Our estimated number of [workforce jobs for September 2022 \(next updated March 2023\)](#) was a record high of 36.2 million, which is an increase of 541,000 jobs from December 2019 following quarterly increases throughout 2021 and into 2022.

The total number of jobs includes both employee jobs and self-employment jobs, with a rise in employee jobs being slightly offset by a fall in self-employment jobs in the quarter to September 2022. Employee jobs in September 2022 have continued to grow and are now at a record high of nearly 31.9 million, 1.1 million above their December 2019 pre-coronavirus (COVID-19) level. However, this rate of growth has not been seen in the self-employment jobs, that remain 588,000 below December 2019 levels. The growth in the employee jobs component of workforce jobs up to September 2022 can also be seen in the number of payrolled employees reported in the [Earnings and employment from Pay As You Earn Real Time Information, seasonally adjusted dataset](#), which has increased every month since February 2021.

Across industries the recovery has varied, with 8 of the 20 the sectors still below their pre-coronavirus levels in September 2022. The sectors showing large number of job losses, wholesale and retail trade; repair of motor vehicles and motorcycles, and construction have been offset by large gains in human health and social work; professional, scientific and technical activities; and information and communication.

5 . Vacancies and jobs data

[Vacancies by industry](#)

Dataset VACS02 | Released 14 February 2023

Estimates of vacancies by industry (Standard Industrial Classification 2007).

[Workforce jobs summary](#)

[Workforce jobs by industry](#)

Dataset JOBS02 | Released 13 December 2022

Estimates of jobs by industry (Standard Industrial Classification 2007).

[X06: Single month vacancies estimates \(not designated as National Statistics\)](#)

Dataset X06 | Released 14 February 2023

Single Month Vacancy Survey estimates, not seasonally adjusted.

6 . Glossary

Vacancies

[Vacancies](#) are defined as positions for which employers are actively seeking recruits from outside their business or organisation. The estimates are based on the Vacancy Survey; this is a survey of employers designed to provide estimates of the stock of vacancies across the economy, excluding agriculture, forestry and fishing (a small sector for which the collection of estimates would not be practical).

Jobs

A [job](#) is an activity performed for an employer or customer by a worker in exchange for payment, usually in cash, or in kind, or both. The number of jobs is not the same as the number of [people in employment](#). This is because a person can have more than one job. The number of jobs is the sum of employee jobs from employer surveys, self-employment jobs from the Labour Force Survey (LFS), those in HM Forces and government-supported trainees. The number of people in employment is measured by the LFS; these estimates are available in our [Employment in the UK bulletin](#).

A [more detailed glossary](#) is available.

7 . Measuring the data

Making our published spreadsheets accessible

Following the Government Statistical Service (GSS) [guidance on releasing statistics in spreadsheets](#), we will be amending our published tables over the coming months to improve usability, accessibility and machine readability of our published statistics. To help users change to the new formats we will be publishing sample versions of a selection of our tables and, where practical, initially publish the tables in both the new and current formats. If you have any questions or comments, please email labour.market@ons.gov.uk.

Coronavirus

For more information on how labour market data sources are affected by the coronavirus (COVID-19) pandemic, see our [Coronavirus and the effects on UK labour market statistics article](#), published on 6 May 2020, which details some of the challenges that we have faced in producing estimates at this time.

An article, published on 11 December 2020, [compares our labour market data sources and discusses some of the main differences](#).

Workforce Jobs estimates include data from the Labour Force Survey (LFS). From the 15 July 2021, an improved LFS weighting methodology, better accounting for population changes through the pandemic was implemented, affecting periods from January to March 2020 onwards. For more information on the changes to LFS weighting methodology through the pandemic please see our article on the [LFS Survey weighting methodology](#).

Sources

The data in this bulletin come from surveys of businesses. It is not feasible to survey every business in the UK, so these statistics are estimates based on samples, not precise figures.

Vacancies

Estimates of vacancies are obtained from the [Vacancy Survey](#), a survey of employers. Adzuna [Online job advert estimates](#) are also published as part of the [Economic activity and social change in the UK, real-time indicators bulletin](#).

Jobs

Estimates of jobs are compiled from a number of sources, including Short-Term Employment Surveys (STES), the Quarterly Public Sector Employment Surveys (QPSES) and the [Labour Force Survey \(LFS\)](#). STES is a group of surveys that collect employment and turnover information from private sector businesses. In December of each year, the jobs estimates are "benchmarked" to the latest estimates from the [Business Register and Employment Survey \(BRES\)](#).

The STES estimates are drawn for a specified date early in the last month of each calendar quarter. The March 2020 data were from 13 March 2020 before the start of coronavirus (COVID-19) social distancing measures.

For more information on how jobs data are measured, please see the Measuring the Data section in our [previous release](#).

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in the [Vacancy Survey QMI](#) and [Workforce jobs QMI](#).

Sampling variability

The sampling variability of the three-month average vacancies level is around plus or minus 1.3% of that level expressed as a [coefficient of variation](#), giving a 95% [confidence interval](#) for estimates of approximately plus or minus 32,000.

The sampling variability of the three-month average vacancies level, for a typical industrial sector is around plus or minus 6% of that level.

Table 1: Sampling variability for estimates of jobs in the UK, thousands

SIC 2007 Section		United Kingdom	
		Estimate for Sep 2022	Sampling variability of estimate [note 1]
A	Agriculture, forestry & fishing	346	±42

Workforce jobs enquiries 01633 456776

Sources: Employer surveys, Labour Force Survey and administrative sources

1. Workforce Jobs figures are a measure of jobs rather than people. For this reason estimates of self-employment jobs and government supported trainee jobs differ from estimates of people in self-employment and in government supported training and employment programmes shown at Table 3. The estimates for government supported trainees shown in this table exclude trainees with contracts of employment as such people are included in the estimates of employee jobs.

2. This series is not exclusively a public sector series as it includes some private sector jobs. See table 4 for estimates of public and private sector employment.

Source: ONS Vacancy Survey/ Labour Force Survey

Vacancy Survey enquiries: vacancy.survey@ons.gov.uk, 01633 456777

1. Excludes Agriculture, Forestry and Fishing.

2. Unemployment estimates are produced from the Labour Force Survey (LFS) and are always one period behind the ONS Vacancy Survey estimates. This table therefore shows estimates for the same periods as shown in table 1 (which shows LFS estimates).

VACANCIES

21 Vacancies by industry

Standard Industrial Classification (2007)
