# 1 . Other pages in this release

Other commentary from the latest labour market data can be found on the following pages:

- [Labour market overview](#)
- [Employment in the UK](#)
- [Average weekly earnings in Great Britain](#)

## 2 . Main points

- While the number of vacancies has been generally increasing since 2012, it has been falling since early 2019.
- For April to June 2019, there were an estimated 827,000 vacancies in the UK, 9,000 fewer than a year earlier and 19,000 fewer than for the three months to March 2019.
- There were an estimated 138,000 vacancies in the human health and social work sector in April to June 2019; this accounted for 16.7% of all vacancies in the UK.

The data in this bulletin come from surveys of businesses. It is not feasible to survey every business in the UK, so these statistics are estimates based on samples, not precise figures

## 3 . Analysis of vacancies and jobs

## Vacancies

**Figure 1: The number of vacancies in the UK has been generally increasing since 2012 although it has been falling since early 2019**

Number of vacancies in the UK, seasonally adjusted, April to June 2001 to April to June 2019

Figure 1: The number of vacancies in the UK has been generally increasing since 2012 although it has been falling since early 2019

Number of vacancies in the UK, seasonally adjusted, April to June 2001 to April to June 2019

**Source: Office for National Statistics – Vacancy Survey**

The estimated [number of vacancies](#) in the UK fell sharply during the recession of 2008 to 2009. Since 2012, it has generally increased although it has been falling since early 2019. For April to June 2019, there were an estimated 827,000 vacancies in the UK, 9,000 fewer than a year earlier and 19,000 fewer than for the previous quarter (January to March 2019).

## Figure 2: The vacancy rate for hotels and restaurants has been consistently higher than for other sectors

Job vacancies per 100 employee jobs for selected industries in the UK, seasonally adjusted, April to June 2001 to April to June 2019

### Figure 2: The vacancy rate for hotels and restaurants has been consistently higher than for other sectors

Job vacancies per 100 employee jobs for selected industries in the UK, seasonally adjusted, April to June 2001 to April to June 2019

Source: Office for National Statistics – Vacancy Survey

#### Notes:

1. The sharp upward movement in the public sector series in early 2011 was because of the recruitment of temporary census enumerator jobs by the Office for National Statistics.

For April to June 2019 it is estimated that:

- there were 2.7 job vacancies per 100 employee jobs across the economy as a whole
- the sector showing the highest vacancy rate was accommodation and food services (3.9 vacancies per 100 employee jobs)
- the sector showing the lowest vacancy rate was public administration and defence (1.7 job vacancies per 100 employee jobs)

## Jobs (first published on 11 June 2019)

**Figure 3: The number of professional, scientific and technical jobs increased by 149,000 between March 2018 and March 2019**

Changes in the number of jobs in the UK between March 2018 and March 2019, seasonally adjusted

Figure 3: The number of professional, scientific and technical jobs increased by 149,000 between March 2018 and March 2019

Changes in the number of jobs in the UK between March 2018 and March 2019, seasonally adjusted

Source: Office for National Statistics – Workforce jobs

The [number of jobs](#) is not the same as the number of people in employment. This is because a person can have more than one job. Estimates for the number of people in employment are available in [Employment in the UK](#).

Between March 2018 and March 2019, the total number of jobs in the UK increased by 589,000 to reach an estimated 35.54 million. The sector showing the largest estimated increase in jobs was professional, scientific and technical activities (up 149,000 on the year).

These jobs estimates were first published on 11 June 2019. The jobs estimates will next be updated on 10 September 2019.

**Figure 4: There has been a decline in the number of jobs in manufacturing, mining and quarrying since records began in 1978**

Number of manufacturing, mining and quarrying jobs in the UK, seasonally adjusted, June 1978 to March 2019

Figure 4: There has been a decline in the number of jobs in manufacturing, mining and quarrying since records began in 1978

Number of manufacturing, mining and quarrying jobs in the UK, seasonally adjusted, June 1978 to March 2019

Source: Office for National Statistics – Workforce jobs

The number of jobs in manufacturing, mining and quarrying fell steadily between 1978 (when comparable records began) and 2008 but has been fairly stable for the last 10 years.

## 4 . Vacancies and jobs data

### [Vacancies by industry](#)

O	Public admin and defence; compulsory social security	1,514	±14
P	Education	2,986	±37
Q	Human health and social work activities	4,471	±60
R	Arts, entertainment and recreation	1,068	±39
S	Other service activities	936	±45

Source: Office for National Statistics – Workforce jobs

#### Notes

1. The sampling variability estimates are for 95% confidence intervals and are calculated on data for June 2018 that are not seasonally adjusted. [Back to table](#)

More detailed sampling variability information for estimates of jobs is available from [Dataset JOBS07](#).

## 5 . Glossary

## Jobs

A [job](#) is an activity performed for an employer or customer by a worker in exchange for payment, usually in cash, or in kind, or both. The number of jobs is not the same as the number of [people in employment](#). This is because a person can have more than one job. The number of jobs is the sum of employee jobs from employer surveys, self-employment jobs from the Labour Force Survey, those in HM Forces and government-supported trainees. The number of people in employment is measured by the Labour Force Survey (LFS); these estimates are available in our [Employment in the UK](#) release.

## Vacancies

[Vacancies](#) are defined as positions for which employers are actively seeking recruits from outside their business or organisation. The estimates are based on the Vacancy Survey – a survey of businesses designed to provide estimates of the stock of vacancies across the economy, excluding agriculture, forestry and fishing (a small sector for which the collection of estimates would not be practical).

A more detailed [Glossary](#) is available.

## 6 . Measuring the data

Estimates of jobs are compiled from a number of sources, including Short Term Employer Surveys (STES), the [Quarterly Public Sector Employment Survey \(QPSES\)](#) and the [Labour Force Survey \(LFS\)](#). STES is a group of surveys that collect employment and turnover information from private sector businesses. In December of each year, the jobs estimates are “benchmarked” to the latest estimates from the [Business Register and Employment Survey](#).

Estimates of vacancies are obtained from the [Vacancy Survey](#), a survey of employers.

The Quality and Methodology Information (QMI) reports for [jobs](#) and [vacancies](#) pull together important qualitative information on the various dimensions of data quality, as well as providing a summary of methods used to compile the output.

## 7 . Strengths and limitations

The figures in this bulletin mainly come from surveys of businesses, which gather information from a sample rather than from the whole population. The samples are designed to be as accurate as possible given practical limitations such as time and cost constraints. Results from sample surveys are always estimates, not precise figures. This can have an impact on how changes in the estimates should be interpreted, especially for short-term comparisons.

As the number of people available in the sample gets smaller, the variability of the estimates that we can make from that sample size gets larger. Estimates for small groups (for example, vacancies in the construction industry), which are based on quite small subsets of the Vacancy Survey sample, are less reliable and tend to be more volatile than for larger aggregated groups (for example, total vacancies in the UK).

In general, short-term changes in the growth rates reported in this bulletin are not usually greater than the level that can be explained by sampling variability. Short-term movements in reported rates should be considered alongside longer-term patterns in the series and corresponding movements in other sources to give a fuller picture.

Further information is available in [A guide to labour market statistics](#).

Sampling variability information for jobs is available in Table 1 in this bulletin and in [Dataset JOBS07](#).

The sampling variability of the three-month average vacancies level is around plus or minus 1.5% of that level.

Workforce jobs enquiries 01633 456776

Sources: Employer surveys, Labour Force Survey and administrative sources

1. Workforce Jobs figures are a measure of jobs rather than people. For this reason estimates of self-employment jobs and government supported trainee jobs differ from estimates of people in self-employment and in government supported training and employment programmes shown at Table 3. The estimates for government supported trainees shown in this table exclude trainees with contracts of employment as such people are included in the estimates of employee jobs.

2. This series is not exclusively a public sector series as it includes some private sector jobs. See table 4 for estimates of public and private sector employment.

# VACANCIES

1. Excludes Agriculture, Forestry and Fishing.

Source: ONS Vacancy Survey

2. Not seasonally adjusted. These series do not display seasonality. Therefore the unadjusted series is the best estimate of a 'seasonally adjusted' series.

\* Change on previous non-overlapping three month rolling average time period.
