

RESPONDENT: 2938844323 – Keith Rippin
SECTOR: Unknown - Individual

Q1 - What are your views of the different census approaches described in the consultation document?

Only a census that gives information similar to that that collected in the 2011 census and covers 100% of the population is suitable for my needs. Therefore Box A is the nearest to meeting these needs but I am concerned about the possibility of lessened coverage due to the fact that not all will have access to a computer or may be discouraged from responding due to this medium of collecting the information

Q2 - Please specify any significant uses of population and housing statistics that we have not already identified.

Q3 - Please specify any significant additional benefits of population and housing statistics that we have not already identified.

Q4 - What would the impact be if the most detailed statistics for very small geographic areas and small population groups were no longer available? High, medium, low or no impact?

High

If medium or high, please give further information.

It would no longer be able to use the data as it would not be available which would prevent my research.

Q5 - What would the additional benefit be if more frequent (i.e. annual) statistics about population characteristics were available for areas like local authorities and electoral wards? High, medium, low or no additional benefit?

No Additional Benefit

If medium or high please give further information.

Q6 - Please specify any significant uses of census information for historical research that we have not already identified.

Q7 - What advantages or disadvantages for genealogical or historical research can you see from a move to a solution based on archiving administrative data sources?

None

Q8 - What are your views of the risks of each census approach and how they might be managed?

Q9 - Are there any other issues that you believe we should be taking into account?
