1 . Main points

- In the week ending 9 September 2022 (Week 36), 10,753 deaths were registered in England and Wales; 365 of these deaths mentioned "novel coronavirus (COVID-19)", accounting for 3.4% of all deaths.
- This is an increase compared with the week ending 2 September 2022 (Week 35), when the number of all-cause deaths registered was 8,868; COVID-19 accounted for 314 of these deaths (3.5%), which was a larger proportion than the current week.
- The number of deaths in week 35 and week 36 were affected by the bank holiday on 29 August 2022, so caution is needed when comparing across weeks, and with the five-year average.

Table 1: Deaths registered in England and Wales, week ending 9 September 2022 (Week 36 2022)

Week 36 2022	England and Wales		
	England	Wales	
Total deaths (all causes)	10,753	10,058	666
Excess deaths	938	853	78
Percentage change compared to 5-year average (2016 to 2019 and 2021)	9.6%	9.3%	13.3%
Deaths involving COVID-19	365	339	24
Percentage of deaths involving COVID-19	3.4%	3.4%	3.6%
Total deaths (Week 11 2020 to Week 36 2022)	1,477,705	1,384,578	90,918
Total involving COVID-19 (Week 11 2020 to Week 36 2022)	186,479	175,369	10,794
Total excess deaths (Week 11 2020 to Week 36 2022)	151,648	145,142	7,773

Source: Office for National Statistics – Deaths registered weekly in England and Wales

- Of the 365 deaths involving COVID-19 in Week 36, 61.1% (223 deaths) had this recorded as the underlying cause of death, a larger proportion than Week 35 (58.0%).
- The number of deaths was above the five-year average in private homes (23.8% above, 584 excess deaths), hospitals (6.2% above, 276 excess deaths), care homes (2.6% above, 56 excess deaths) and other settings (2.9% above, 23 excess deaths) in Week 35 in England and Wales.
- UK mortality figures for the week ending 9 September are not available.

Figure 1: Total deaths from all causes were above the five-year average in Week 36

Number of deaths registered by week, England and Wales, 28 December 2019 to 9 September 2022

Notes:

1. Figures include deaths of non-residents.
2. Based on date a death was registered rather than occurred.
3. All figures are provisional.
4. The International Classification of Diseases, 10th Edition (ICD-10) definitions are available in the [Measuring the data](#) section.
5. The number of deaths registered in a week are affected when bank holidays occur.
6. The average for 2015 to 2019 is used for comparisons with 2020 and 2021.
7. The average for 2016, 2017, 2018, 2019 and 2021 is used for comparisons with 2022.

2 . Deaths data

[Deaths registered weekly in England and Wales, provisional](#)

Dataset | Released 21 September 2022

Provisional counts of the number of deaths registered in England and Wales, by age, sex and region, in the latest weeks for which data are available. Includes data on coronavirus (COVID-19) deaths.

[Death registrations and occurrences by local authority and health board](#)

Dataset | Released 21 September 2022

Provisional counts of the number of deaths registered in England and Wales, including deaths involving COVID-19, by local authority, health board and place of death in the latest weeks for which data are available.

[Number of deaths in care homes notified to the Care Quality Commission, England](#)

Dataset | Released 21 September 2022

Provisional counts of deaths in care homes caused by COVID-19 by local authority. Published by the Office for National Statistics (ONS) and the Care Quality Commission (CQC).

[Care home resident deaths registered in England and Wales, provisional](#)

Dataset | Released 21 September 2022

Provisional counts of the number of care home resident deaths registered in England and Wales, by region, including deaths involving COVID-19, in the latest weeks for which data are available.

[Deaths registered weekly due to COVID-19 by region of usual residence, provisional](#)

Dataset | Released 8 March 2022

Provisional counts of the number of deaths due to coronavirus (COVID-19) registered by region of usual residence in England and Wales.

- Deaths registered weekly in England and Wales by region: COVID-19
- Death registrations and occurrences by local authority and place of death

3 . Glossary

Coronavirus (COVID-19) deaths

COVID-19 deaths are those deaths registered in England and Wales in the stated week where COVID-19 was mentioned on the death certificate. A doctor can certify the involvement of COVID-19 based on symptoms and clinical findings; a positive test result is not required. Definitions of COVID-19 for deaths in Scotland and Northern Ireland are similar to England and Wales.

4 . Measuring the data

We publish timely, provisional counts of death registrations in our [Deaths registered weekly in England and Wales, provisional dataset](#). These are presented:

- by sex
- by age group
- for regions (within England)
- for Wales as a whole

To allow time for registration and processing, figures are published 11 days after the week ends. We also provide provisional updated totals for death occurrences based on the latest available death registrations, up to 17 September 2022.

The five-year average shows us the expected number of deaths per week based on the most recent years and smooths random year-on-year fluctuations. We use the 2015 to 2019 five-year average as a usual non-coronavirus (COVID-19) period to compare with. The further we move away from this period, the less robust the measure is because of changes in population numbers, age and structure.

Deaths registered in 2022 will be compared with the 2016, 2017, 2018, 2019 and 2021 five-year average. As 2021 was a coronavirus pandemic year, other comparisons are also used including week-by-week and 2021 only.

The number of registration days in a reference period can affect mortality statistics. Bank holidays can affect the number of registrations because registration offices are closed.

Coronavirus

This weekly release provides a breakdown of the number of deaths involving coronavirus. This includes deaths where COVID-19 or suspected COVID-19 was mentioned anywhere on the death certificate, including in combination with other health conditions.

If a death certificate mentions COVID-19, it will not always be the main cause of death but may be a contributory factor.

Data coverage

The number of weeks in the year will affect how many days the data cover in the year. Leap years require a 53rd week to be added to the end of the calendar year. The last leap year was in 2020. It is more appropriate to compare 2020 figures with the average for week 52 than with a single year from five years previously. View more detail on the data coverage for the weekly deaths bulletin in our [Coronavirus and mortality in England and Wales methodology](#).

Influenza and pneumonia have been included for comparison in our Deaths registered weekly in England and Wales, provisional dataset. These illnesses are a well-understood cause of death involving respiratory infection likely to have somewhat similar risk factors to COVID-19.

Registration delays

This bulletin is based mainly on the date that deaths are registered, not the date of death. Deaths in England and Wales are normally registered within five days. There can be a longer delay, particularly if the death is referred to a coroner. Read more in our [Impact of registration delays on mortality statistics article](#).

We have developed a statistical model to estimate the number of deaths likely to have occurred in each week based on the previous pattern of registration delays, including the effects of bank holidays. You can find out more about this statistical model in our [Predicting total weekly death occurrences in England and Wales methodology](#). Results are shown in sheet 11 of our [Deaths registered weekly in England and Wales, provisional dataset](#).

Classification codes

From the week ending 26 February 2021 (Week 8), new International Classification of Diseases codes for COVID-19 issued by the World Health Organization were used for deaths involving COVID-19. Read more in our [Coronavirus and mortality in England and Wales methodology](#).

For further information on data quality, legislation and procedures relating to mortality, and a glossary of terms, view our [User guide to mortality statistics methodology](#).

5 . Strengths and limitations

Comparability

These weekly figures are for England and Wales only. They are from the formal death registration process and may include cases where the doctor completing the death certificate diagnosed possible cases of coronavirus (COVID-19), for example, based on relevant symptoms, but where no test was conducted. The Office for National Statistics (ONS) figures are different from the [daily surveillance figures on COVID-19 deaths published by the Department of Health and Social Care \(DHSC\) on GOV.UK](#), which are for the UK as a whole and its constituent countries.

On 1 February 2022, the UK Health Security Agency technical summary data series was revised to include deaths of positively tested individuals where the death occurred within 28 days, and deaths within 60 days of a positive test. You can find out more about these changes in [the UK Health Security Agency technical summary \(PDF, 443KB\)](#).

Some definitions of COVID-19 deaths differ between sources and setting. Read more in our [Coronavirus and mortality in England and Wales methodology](#).

Quality

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in our [Mortality statistics in England and Wales QMI](#).
